## IMPORTANT PERIODICAL WORKS

In Course of Publication  
By Charles Knight and Co. Ludgate Street,  
And to be had of all Booksellers.

## THE PENNY CYCLOPEDIA

of the Society for the Diffusion of Useful Knowledge.  
Published in Monthly Parts, price 1s. 6d., forming every four  
months a Volume, price 7s. 6d. bound in cloth. It is also issued  
in Numbers, price One Penny, which are on sale concurrently with  
the issue of the Parts. Copiously illustrated with Woodcuts.

Nine Volumes of this Work have been published, and the  
Tenth will be completed during the present Year. "The Penny  
Cyclopædia" will not exceed Twenty Volumes in the whole; and  
the rate at which it is now issued, namely, Three Volumes  
annually, will bring the Work to a conclusion in little more than  
Three Years.

It is intended, on the 1st of January, 1838, to re-issue "The  
Penny Cyclopædia" in Monthly Half Volumes, price Three Shillings  
each. By this arrangement new Subscribers, by a moderate  
periodical outlay, will be enabled to complete the Work simultane-  
ously with the Purchasers of the current Edition.

2. The Penny Magazine of the Society for  
the Diffusion of Useful Knowledge. Published in Weekly Num-  
bers, price One Penny, and in Monthly Parts, price Sixpence.  
The Sixth Volume will be published on the 1st of January, 1838.

The price of the First Volume is 6s. bound in cloth; the other  
Volumes, 7s. 6d. each.

3. The Pictorial Bible; being the Old and  
New Testaments, according to the Authorized Version. Illus-  
trated with many Hundred Woodcuts, representing the most im-  
portant Events, after the most celebrated Pictures; the Landscape  
Scenes, from Original Drawings, or from Authentic Engravings;  
and the subjects of Natural History, of Costume, and of Antiqui-  
ties, from the best Sources. To which are added, Original Notes,  
chiefly explanatory of the Engravings, and of such Passages con-  
nected with the History, Geography, Natural History, and Anti-  
quities of the Sacred Scriptures as require Observation. "The  
Pictorial Bible" is issued in Monthly Parts, price 2s., and in  
Weekly Numbers, price 6d.

Two Volumes of "The Pictorial Bible" have been completed.  
The First includes 17s. 6d. handsomely bound in  
cloth. The Second includes Isaiah, price One Pound, uniformly  
bound. The Third Volume will complete the Work.

4. The Pictorial Edition of the New Testa-  
ment. This portion of the Pictorial Bible will be issued sepa-  
rately, and will be completed in Six Monthly Parts, the first of  
which will appear on the 1st of December, price 2s. The Volume  
will contain about Two Hundred Woodcuts.

5. The Pictorial History of England: being  
a History of the People as well as a History of the Kingdom.  
Illustrated with many Hundred Woodcuts of Monumental Re-  
cords; Coins; Civil and Military Costume; Domestic Buildings,  
Furniture, and Ornaments; Cathedrals, and other works of Ar-  
chitecture; Sports, and other Illustrations of Manners; Me-  
chanical Inventions; Portraits of Eminent Persons; and Remark-  
able Historical Scenes.

The Pictorial History of England is published in Monthly  
Parts, price 6d., and in Weekly Numbers, price 6d., and will be  
completed in three super-royal Octavo Volumes, similar to those  
of the Pictorial Bible. The Work, in addition to its Woodcuts,  
will contain about as much letter-press as twenty common Octavo  
Volumes of Four Hundred Pages each. The First Volume will  
be completed in December 1837.

6. The Pictorial Edition of the Book of  
Common Prayer. The Pictorial Edition of the Book of Common  
Prayer will form a Companion Volume to the "Pictorial Bible,"  
and the Publishers beg to state, that, whilst it is their design to  
produce one of the most splendidly illustrated Books which has  
appeared in this or any other country, they are anxious to offer  
an edition of our Liturgy which, in its annotations, shall be found  
as useful and unexceptionable as the Notes to the Bible which  
they are publishing with such signal success. It is obvious that  
the Annotations and Introductory Matter to the Common Prayer  
should be written by a Clergyman of the Church of England; and  
they are fortunate in having been able to confide this department  
to the Rev. H. Stebbing, Minister of St. James's Episcopal  
Chapel, Hampstead Road. The total number of Engravings in  
the Pictorial Edition of the Book of Common Prayer, will be  
about Six Hundred.

Published in Monthly Parts, price 6s. 6d. each, to form a  
Companion Volume to the Pictorial Bible.

On the 1st of January, 1838, will be published, price Five Shil-  
lings, the First Part of a Quarto Edition of

The Pictorial Bible; to be completed in Six-  
teen Monthly Parts, forming Four Handsome Volumes.

The Proprietors of the "Pictorial Bible" have been induced to  
undertake a Quarto Edition (to correspond with Mant and  
D'Oyley's, Scott's, and other Bibles) at the urgent request of many  
Correspondents, who are anxious that the Notes, whose value has  
been universally admitted as forming in themselves a Library  
for the Religious Student, should be printed in a larger type.  
The Text will, of course, be proportionately larger. The altera-  
tions in this Edition will be limited to a few Corrections, the En-  
gravings will be the same, and the impressions in every respect  
as excellent as those of the Original Edition.

## THE PICKWICK PAPER COMPLETE.

In 1 vol. 8vo. bound in cloth, price 1l. 1s.

THE POSTHUMOUS PAPERS of the  
PICKWICK CLUB.

By "BOZ."  
With 43 Illustrations by "Phiz."  
Chapman and Hall, 186 Strand, London.

## SKETCHES BY "BOZ."

Complete in 1 vol. uniform with the "Pickwick Papers."  
No. 1. to be continued in 20 Monthly Numbers, 8vo. price 1s. each.  
SKETCHES by "BOZ." illustrative of  
Every-day Life and Every-day People; new edition,  
comprising both Series, and embellished with 60 Illustrations,  
by GEORGE CRUIKSHANK.  
Chapman and Hall, 186 Strand, London.

## CHESS.

8d edition, corrected, 1 vol. royal 16mo. neatly bound,  
price 5s. 6d.

CHESS for BEGINNERS, in a Series of  
Progressive Lessons, showing the most approved Method  
of Beginning and Ending the Game; together with various Sit-  
uations and Check Mates.

By WILLIAM L. IRWIN.  
Author of several Works on the Game.  
With Twenty-four Diagrams printed in Colours.  
Chapman and Hall, 186 Strand, London.

## NEW WORKS.

Published by Messrs. Saunders and Olley, Conduit Street,  
Hanover Square.

MR. BULWER'S NEW NOVEL.  
ERNEST MALTRAVERS.

By the Author of "Fielham," "Kienzi," &c.

## II.

## The Lady Anabetha.

By the Author of "Constance," "Rosabel," &c.

## III.

## Country Stories;

A Sequel to "Our Village."

## IV.

## Society in America.

By Miss Martineau.

## V.

## Mr. Bulwer's Athens and the Athenians.

9 vols. 8vo.

## VI.

## Turkey, Greece, and Malta.

By Adolphus Slade, Esq.  
Author of "Travels in the East."

## VII.

## The Great Metropolis: Second Series.

By the Author of "Random Recollections of the Lords  
and Commons."

## VIII.

## Memorials of Mrs. Hemans.

With Extracts from her Private Letters.

By H. F. Chorley.

Agents: For Ireland, J. Cumming, Dublin; for Scotland,  
Bell and Bradfute, Edinburgh.

A new edition, compressed into small 8vo. price 6s. boards.

THE LAST DAYS of our LORD'S  
MINISTRY: a Course of Lectures on the Principal  
Events of Passion Week.

By the Rev. WALTER FARQUHAR HOOK, M.A.  
Vicar of Leeds, Prebendary of Lincoln, Chaplain in Ordinary  
to the King.  
James Duncan, 37 Paternoster Row.

SCIENTIFIC TREATISES from  
DR. LARDNER'S CABINET CYCLOPEDIA, 6s. each.

"The scientific works of Lardner's Cyclopædia may be read at  
leisure hours; and the knowledge of these alone will shield us  
from the imputation of wasting time on classics while ignorant  
of other subjects."—*From the Student's Guide to a Course of Read-  
ing necessary for obtaining University Honours. By a Graduate of  
Oxford. Just published.*

## I.

Preliminary Discourse on the Subject of  
Natural Philosophy.

By Sir John Herschel.

"Sir John Herschel is eminently qualified for his task, being a  
distinguished example of a person possessing a profound and com-  
plete knowledge of almost every branch of physics."—*Quarterly  
Review.*

## II.

## History of Natural Philosophy.

By Baden Powell.

Professor of Natural Philosophy in the University of Oxford.  
"A work which has rendered the department of scientific his-  
tory so familiar and attractive, that it cannot fail to produce a  
very happy effect in the dissipation of prejudice and miscon-  
ceptions on the important subject that constitutes his theme."—*Monthly  
Review.*

## III.

## Treatise on Astronomy.

By Sir John Herschel.

"We recommend it to the attention of every body who wishes  
to become acquainted with the sublime truths of astronomy,  
without having his mind harassed by the technical details which  
render almost all other works of the kind repulsive to the general  
reader."—*Quarterly Review.*

## IV.

## Treatise on Mechanics.

By Capt. Kater and Dr. Lardner.

"Such a work as this, conducted by such men as the authors,  
is a national benefit."—*Gentleman's Magazine.*

## V.

## Treatise on Optics.

By Sir David Brewster.

"A succinct and masterly exposition of the subject, elucidated  
with many new and very curious remarks."—*Asiatic Journal.*

## VI.

## Treatise on Heat.

By Dr. Lardner.

"We have seldom seen a scientific subject treated in a more  
popular and satisfactory manner than in the present volume."—*Literary Gazette.*

## VII.

## Treatise on Hydrostatics and Pneumatics.

By Dr. Lardner.

"In this volume every article is both entertaining and useful."—*Imperial Magazine.*

## VIII.

## Treatise on Chemistry.

By Professor Donovan.

"The best existing compendium of chemical knowledge."—*Edinburgh Evening Courier.*

## IX.

Treatise on Arithmetic, Theoretical and  
Practical.

By Dr. Lardner.

"Should be examined by all who take an interest in the sci-  
ence of numbers."—*Spencer's Magazine.*  
London: Longman and Co.; and John Taylor.

In super-royal 8vo. 1l. 1s.; India Proof, 2l. 18s. 6d.

## THE KEEPSAKE for 1838.

Illustrated by a Series of highly finished Engravings.  
Executed under the Superintendence of Mr. Charles Heath.  
From Designs made expressly for this Work, and intended also to  
form a Series of Illustrations to Lord Byron's Works.

"The style in which this volume is produced renders it beau-  
tiful amongst the beautiful. To look upon the binding—is to  
purchase."—*Court Journal.*

"The volume for 1838 is superior in every respect to any that  
have preceded it."—*Sunday Times.*

"A very enchanting collection of poetry and romance, just  
suited for cheerful fire-side relaxation in the gloomy winter  
months."—*St. James's Chronicle.*

"The engravings of the plates have a degree of depth, richness,  
and finish, that we find in no other Annual in equal perfection."  
—*Spectator.*

London: Longman, Orme, and Co.

MR. BENTLEY has just published  
the following NEW WORKS:—

## I.

## Traditions of Chelsea College.

Including Anecdotes and Adventures of Military Life.

### REVIEW OF NEW BOOKS.

*Rambles in the Footsteps of Don Quixote.* By the late H. D. Inglis; with Illustrations by George Cruikshank. Pp. 203. London, 1837. Whittaker.

THIS is a charming volume, though replete with bitter fancies, even more than sweet. Our regrets for the loss of the amiable and gifted writer are increased by reading so fine a proof of his taste and talent; and, while we dwell with pleasure on passages not unworthy of Le Sage, or of Cervantes himself, sorrow mingles with our admiration, and we exclaim, "Poor Inglis!" He was cut off from us at the early age of forty years.

This work is published by his widow, and, we believe, at her own risk—a powerful recommendation to universal favour. But it stands in no need of private or benevolent feeling to aid its popularity; it is, in itself, one of the most graceful and agreeable books that we have seen for many a day.

From Toledo, the author sets out to visit the scenes of the immortal romance; and, having determined Miguel Estevan to have been the actual birth-place of the knight of La Mancha, he has there the good fortune to prevail on a barber (worthy to be, if he was not, the descendant of Nicholas) to accompany him on his tour; and they journey together to the Windmills, the Inn mistaken for a castle, the Brown Mountains, and other localities, either really those of Cervantes, or such as might well be received in their stead. The whole ~~is~~ is, we repeat it, charming; and many incidental remarks on the work of Cervantes are very interesting. We select, however, a few pages involving, also, more personal concern.

"Our provisions were not very tempting; the barber had been the purveyor, and had suited his own taste rather than mine. They consisted of several thick pancakes, interlarded with slices of bacon; and of cheese, bread, and wine. These are the provisions usually carried by every muleteer in Spain, with the addition sometimes of salted fish; but the pancake being well seasoned with garlic, and the cheese made of sheep's milk, neither of them was very enticing. As for the wine of La Mancha, in which Sancho Panza found a solace for many of his hardships, its goodness depends altogether upon the skin in which it is carried; for, unless the skin be old and well-seasoned, the best *val de penas* acquires an unpleasant flavour. But it is impossible that the wine of La Mancha should be carried otherwise than in skins; the roads are only fitted for mules, and skins can be more easily and more safely carried across mules than casks; but, indeed, casks are out of the question in a country in which there is scarcely any wood. It is no contemptible art, that, of drinking out of a wine-skin without spilling the wine and drenching the bottom; the wine-skin is held horizontally, one hand supporting its rotundity, and, by the pressure of the fingers, the wine is thrown forward to the neck, or narrow part of the skin. When, in the translations of Don Quixote, we meet with the word bottle, we must, of course, substitute skin, otherwise the sentence will sometimes be unintelligible; as,

for example, when, after the adventure with the windmills, we find Sancho visiting his bottle, and discovering that it was much more lank than it was the night before. The sun was now blazing right overhead, so that it was out of the question to think of journeying for some hours; and, as for a *siesta*, that would scarcely have been prudent where the shade was so scanty. Willing, therefore, to pass the time in some other way, 'Mr. Barber,' said I, 'I feel well convinced that you have not been all your life a barber in Miguel Esteban; we have now two good hours to spare; the shade of this olive-tree is too scanty to allow a *siesta*, and how, then, can we spend our time better than you in telling, and I in listening to your story?' 'In truth,' replied the barber, 'you have guessed well in thinking I have not been all my life a barber in Miguel Esteban. I have been many trades; and since, as you truly say, there is no shade for a *siesta*, and as our wine-skin would be dried up by the rays of the mid-day sun before we could get to Lapiche, you shall hear my story, such as it is;' and the barber accordingly began as related in the next chapter. 'I was born in the town of Manzanares, in La Mancha. My father was porter to the Dominican convent there, and my mother was laundress in the house of the Duke de San Carlos, who owned then, and for any thing that I know to the contrary, owns to this day, all the town of Manzanares and the neighbouring vineyards. As for me, I led the merriest of lives till I was fourteen years of age; I was idolised both by my father and mother, and spent my time about equally in the kitchen of the duke and the Dominicans. In the one, I tasted the most savoury stews, and in the other, the most delicious fruit in the world; and nothing was further from my thoughts than to leave so agreeable a mode of life, when one day my father called me to him and said, 'Lazaro, it is time that thou shouldst think of bettering thy fortune, and I have found thee a road to it.' For my part, I felt no great inclination towards bettering my condition, which appeared to me the most agreeable in the world; and my mother was also of the same opinion: but the picture drawn by my father of my future prospects was so flattering, that even I was anxious to commence my new mode of life. The opening was this: a certain stranger, who lately died in the house of the curate of the parish church of San Salvador, in Manzanares, had left to the church money for eight thousand masses to get his soul out of purgatory; and the curate, willing to receive the legacy, without the condition of saying a mass every day for twenty-two years, resolved to apply to the Archbishop of Toledo, as the head of the church, for permission to say eight, in place of eight thousand masses,—a restriction which would not affect the condition of the stranger's soul, since the archbishop might declare, by his supreme authority, that eight masses should be as effectual as eight thousand, in praying it out of purgatory. The curate applied to the Dominicans to find a trusty messenger; they selected my father, and he delegated the mission to me. 'This other letter,' said my father, at the same time, also, putting into my hand the

letter to the archbishop, 'is for the Padre Cirillo, curate of the church of San Pasqual, at Toledo; it recommends thee to his protection; and there is, therefore, little doubt but that he will take thee into his service; and who knows but that thou mayest, by and by, be transferred to the service of the archbishop, whose stews are, no doubt, as far superior to those of the Duke de San Carlos as the melon you are eating is to a turnip.' My teeth already began to water for the archbishop's stews; and I set out the same day with an honest muleteer, who was charged with wine for some of the canons. We did not lag by the way; on the second evening we entered the city of Toledo, which appeared to me little less than a congregation of palaces; and, scarcely even allowing myself time to dispatch a part of the puchero which the muleteer generously divided with me, I inquired the nearest way to the house of the curate Cirillo, so anxious was I to realise the promises of my father. 'Thou shalt enter into my service,' said the cura, when he had read the letter; and, when I heard this piece of good fortune, I already fancied myself transferred to the service of the archbishop, and even scented the savour of his kitchen. My duties in the service of the Padre Cirillo were simple; they consisted in sweeping the church, and cleaning the ornaments used at mass; all the rest of my time was at my own disposal. If my treatment had been agreeable as my duties, I should have had no reason to complain: but the reverend cura, who fed upon dainties every day, shared them only with his housekeeper; and, far from finding myself any nearer the archbishop's stews, I was only permitted to smell those of the cura. My allowance was a small loaf of bread and a string of onions every four days, with a scanty puchero on Sunday; and, while I was half-starved, the cura would say, 'Lazaro, you young rogue, *mejor vida tienes que el papa*, thou livest better than the pope.' But hunger sharpens the wits; I set my ingenuity to work, and speedily discovered a method of bettering my condition. All my master's provisions were kept in a closet, and the door of this closet hunger devised a means of opening; but I resolved that the theft should lie at another door than mine; and every night I made a tolerable meal in my master's store-house, by nibbling round his bread, and cheese, and bacon, so that the rats and the mice got all the blame, and I secured a double portion; for the cura never failed, after roundly abusing the secret thieves, to pare off all the nibbled parts, and hand them to me, saying, 'Eat, Lazaro, you rogue, *que el raton casa limpia es*, rats are clean things.' One day, about this time, after I had been employed in cleaning the ornaments on the major altar in the church, I stole on tiptoe into the sacristy: God forgive me for my intention! a slice of salted cod at breakfast had made me thirsty, and the sacramental cup I knew was brimful. I had scarcely entered the sacristy, when I heard the footstep of the cura pass through the church; and I had only time to hide myself under the petticoats of the Virgin of St. Pilar, when my master entered the sacristy, accompanied by a stranger dressed as a pilgrim, who,

after the door had been shut, produced from below his habit, a small wooden box, which he opened, and put into my master's hand. 'You perceive,' said the stranger, 'that it is as withered as the ear of an antediluvian ass; it would deceive the very devil.' 'Hush,' said the cura, 'recollect where you are;' at the same time glancing towards the Virgin of St. Pilar, whose petticoats slightly moved, and crossing himself; 'it is not necessary that it deceive the devil, if it but deceive the superior of the Carthusian convent.' 'How much am I to get for it?' said the pretended pilgrim, 'That must depend,' said the cura, 'upon the value put upon it by the superior of the Carthusians; put up the ass's ear, and we will go together to the convent: surely an ear of the ass that made the triumphal entry into Jerusalem must be worth half the convent treasury;' and as my worthy master so delivered himself, he turned towards the Virgin, as was his usual custom on leaving the sacristy, made his genuflection, and crossed himself. Whether it might be the ludicrous contrast between the sanctified face with which my master, from habit, paid his respects to the Virgin, and the smile and roguish wink with which he had received the box from the pilgrim, that roused my risible faculties, I am not able to tell, but I burst into an immoderate fit of laughter. At first my master trembled from head to foot, and crossed himself as fast as ever thumb could move: but common sense soon came in place of superstition; for, if the Virgin of St. Pilar had thought fit to shew her displeasure by laughing, the laughter would certainly not have proceeded from under her petticoats. In short, the cura discovered all; and, dragging me from my hiding-place, and telling me to remain in the sacristy till he returned, he went out and locked the door. I expected nothing less, when he returned, than an unmerciful beating; and was, therefore, agreeably surprised when, again entering the sacristy, he addressed me thus: 'I perceive, Lazaro, that thou art an ingenious as well as a gluttonous youngster; for thou not only makest the rats and mice hide thy delinquencies, but even the petticoats of the Virgin of St. Pilar cover both thee and them. Thou hast heard what passed betwixt me and the pilgrim?' 'I heard all,' said I, 'and saw —' 'No matter what thou sawest,' interrupted he, 'I may have occasion for thy services; be discreet and secret: henceforth thou shalt dine at my table every day; and, so saying, he walked out of the sacristy. This was the most agreeable change in the world; the cura's stews, though scarcely equal to those of the Duque de San Carlos, were delicious to one who had been obliged to nibble for six months like a mouse. My master loaded me with kindness; and one day, when we were in the sacristy together, he made me his confidant. 'The monks of the Carthusian convent,' said he, 'are making a collection of relics; the superior tiene mas dinero que ingenio, has more money than brains; and we, who are wiser and poorer, diminish his treasury, and stock his relicary. Harkee, Lazaro,' continued he, 'the fool is not yet satisfied. Thou art not wanting in wit; my invention is nigh exhausted: the ass's ear was a last effort, and proved a hit; but if thou canst think of any thing new, half the profits shall descend into thy empty pockets.' This was encouragement, and I set my brains to work forthwith. One day passing through one of the streets on the outskirts of the city, I saw a cock standing upon the wall of the Franciscan convent garden, and I said to myself, 'Que alegria!' for a

happy thought struck me. "When it was dark, I stole from my master's house, and, making my way to the garden of the Franciscan convent, I surprised a cock in the hen-roost; and next day, finding myself alone with my master, I produced a cock's tongue, and said, 'What will hinder you from placing this in the relicary of the Carthusian convent, as the tongue of the cock that crew to St. Peter?' 'Tis too fresh and too red,' said the cura. 'Put it in the stewpan,' said I, 'it will frizzle as dry as if it had not crowed for a century.' 'Thou'rt a marvel,' cried the cura, 'let me embrace thee; and so —' But, just as the barber had proceeded thus far with his story, chancing to glance towards the place where we had left our mules, they were nowhere to be seen. 'We must go in search of them,' said the barber; 'and, besides, the sun gets lower, and, unless we jog on, we shall scarcely reach Lapiche before dark. My story is a long one, and if you have found any amusement in it, we'll resume it another time; and so, tying up our wallets, and taking another draught from the wine-skin, we rose and went in search of our mules. They had strayed a long way; but at last we discovered them taking their siesta under the partial shade of a sand-bank; and, mounting our beasts, we continued our journey."

Another brief extract will illustrate the character of the critical remarks.

"As we entered Puerto Lapiche, I noticed that all the women of the lower orders wore the skirts of their petticoats thrown over their heads. This is the universal custom in La Mancha, the mantilla being used only by the upper classes; and it explains a passage in 'Don Quixote,' which would otherwise be obscure. Sancho, when upon one occasion he returns home, endeavours to persuade his wife, Theresa, to accept with a good grace the honours in store for her, when he shall have obtained the government of the island. He tells her how great a lady she will then be; and that she must make up her mind for the transformation. But Theresa replies, 'Neither will I put it in the power of those who see me dressed like a countess or governor's lady, to say, Mind Mrs. Pork-feeder, how proud she looks! it was but yesterday she toiled hard at the distaff; and went to mass with the tail of her gown above her head, instead of a veil.' It is worthy of remark, that nowhere in 'Don Quixote' is there a word spoken in praise of the beauty of the women of La Mancha; 'hale,' or 'buxom wench,' are the highest expressions that the veracity of Cervantes permitted him to use, for to have spoken of them in other terms would have been a departure from truth. 'The flower of Castilian maids,' sounds well in poetry; but a Castilian maid, or a maid of La Mancha, which is the same thing, is a coarse, brown, ill-favoured personage, who in any other country would retain her maiden distinction during life."

We have only to add, that the illustrations are quite worthy of the volume and of George Cruikshank; and that the episodes introduced, with personal history and adventures of remarkable individuals, add great zest to the more particularly Quixotic portions of the design.

*The Comic Almanack for 1838, with twelve Illustrations of the Months by George Cruikshank. London, 1837. Tilt.*

This is, as usual, a merry affair; a little in the low line, occasionally, but without a vul-

garity to offend ears the most polite. The "Illustrations of the Months" possess much drollery, and will bear examination for a number of quaint and appropriate jokes and accessories. Nor are the tiny cuts and silhouette additions less humorous or characteristic. Altogether, an hour may be well amused with this annual. As a specimen of the literary and poetical talent it displays, we will quote a song and a half. The first is laid to the score of New Year's Eve, entitled "My Dancing Days are over," and runs thus:—

"My dancing days are over now,  
My legs are just like stumps;  
My fount of youth, dried up, alas!  
Won't answer to the pump.  
Yet who so fond of jigs as I?  
Of hornpipes such a lover?  
Of gallopes, valses,—but, alas!  
My dancing days are over.  
In feats of feet, what foot like mine  
(Excuse me if vain glorious);  
Like mine, for grace and dignity,  
No toe was more notorious.  
Oh! then what joy it was to hear  
Roy's Wife, or Kitty Clover!  
But Drops of Brandy now won't do:  
My dancing days are over.  
My feet seem fastened down with screws,  
That were so glib before;  
And my ten light fantastic toes  
Seem toe-nail'd to the floor.  
I cannot bear a ball-room now,  
Where once I lived in clover;  
Terpsichore quite makes me sick:  
My dancing days are over.  
I used to dance the New Year in,  
And dance the Old Year out;  
Ah! little did I then reflect  
That *chacun a son gout*.  
All summer thro' I skipped and hopped,  
At Margate, Ramsgate, Dover.  
The year was then one spring—but now  
My dancing days are over.  
I'm eighteen stone and some odd pounds,  
So all my neighbours say,  
I'll go this moment to the scale;  
But I can't balance.  
When in a ball-room I appear,  
As soon as they discover  
My presence, off the girls all fly:  
My dancing days are over.  
I'm quite as fat as Lambert was,  
Or any old maid's spaniel;  
And when I walk along the street,  
They cry, "a second Daniel!"  
And if I go into a shop  
Of tailor, hatter, glover,  
They always open both the doors:  
My dancing days are over.  
My college chums oft jeer at me,  
And cry, "Lord, what a porpus!  
Who'd take you for a Johnian!"  
You seem to be of Corpus!  
The stage-coachmen all look as if  
They wished me at Hanover;  
The safety cabs don't think me safe:  
My dancing days are over.  
My great pier glass, that used to shew  
My waist so fine and thin,  
Now, turn whichever way I will,  
Won't take my body in.  
My form, that once a paragon  
Would always amply cover,  
A gig umbrella now requires:  
My dancing days are over.  
In vain my hand I offer now;  
Away each damsel stalks;  
Chalk'd floors no longer may I walk,  
So I must walk my chalks.  
For me there is no woman-kind:  
None want me now for lover.  
Maid, widow, wife, all fly—they know  
My dancing days are over!"

The half belongs to St. Patrick's Day, in March, and is called "An Irish Mellow-day."

"It was Paddy O'Murrough that lov'd Mistress Casey:  
In ribands for her he would squander his pelf;  
And he swore that without her he'd never be aisy.  
And sent her big praties to roast for herself.

He said she was 'Venus, and Mars, and Apolly,'  
And twenty more goddesses up in de skies;  
And never tired praising her swate little ancle,  
And her swate little mouth, and her swate little eyes.

Says he, 'Let de rest get dere bunches o' roses,  
And stiek em so illigant top o' dere head:  
Och! Nora don't nade sich bambocoozification:  
Her own purty locks is as bright as my red.

So Nora, my darlint, now take pity on me—  
Ochone! but 'tis luv is de terrible smart!  
An och, bodderashin! 'tis Mither O' Cupid  
Wid his little shilaly is breakin my heart!

'Twas Lent when Pat said so,—but Nora said No, Sir;  
She knew 'twas no use at that time to consent;  
But by Mothering Sunday Pat found her much softer,  
And, before Lent was over, he saw her relent.

The day was soon fixed—Easter Monday, be sure;  
The time seem'd to Pat a snail's gallop to go;  
'By de hokey!' says he, 'is it fast days dey call em?'  
For fast days, I tink dey move murtherous slow.'

At length Easter Monday arrived, bright and gay;  
Saint Patrick's Day, too—nothing could be more pat.  
To chapel away they all went—in a bus;  
For a wedding, what carriage so proper as that?

So the knot was soon happily tied—tho' I know  
There are some in the world think it wrong thus to  
tie men;

That the poor have no right to get married at all;  
And that low men have no sort of bus'ness with  
Hymen."

We will only give a taste of the prose, under  
"Manners made easy."

"It is common to speak contemptuously of  
tailors and dressmakers. This is bad taste,  
none but a rat would run down the sewers."

"When a lady sits down to the piano-forte,  
always volunteer to turn over the leaves. To  
be able to read music is of no consequence, as  
you will know that she is at the bottom of a  
page when she stops short. If you turn over  
two leaves at once, you will probably have the  
secret thanks of most of the company."

From these extracts it will be seen that the  
accustomed quantity and quality of pun and  
fun are to be found in this year's *Comic*.

*Practical Surgery.* With One Hundred and  
Twenty Engravings on Wood. By Robert  
Liston, Surgeon. 8vo. pp. 481. London,  
1837. Churchill; Renshaw.

MR. LISTON is not only a great surgeon in  
every sense of the word, but he is an original  
thinker, a practitioner at once enlightened and  
unprejudiced, and a reformer of many long-  
standing abuses in the treatment of surgical  
cases. It is more particularly to him that the  
profession is indebted for having, to a great  
extent, superseded, by more cleanly and simple  
means, the use of boiling oils, hot dressings,  
filthy unguents, greasy poultices, stimulating  
plasters, and complicated bandages. His motto  
appears to be simplicity in every thing. De-  
sault said, that the simplicity of an operation is  
the measure of perfection; and Mr. Liston has  
carried the same principle even into the treat-  
ment of surgical cases. On going into the wards  
of the hospital attached to the University College,  
a stranger to the efficient yet simple procedures  
adopted for the most part in that hospital, is  
struck with the absence of fœtor, and with the  
airiness and sweetness of the wards. They  
wonder that blood is not abstracted more fre-  
quently; that cold lotions are rarely to be seen  
in use; and that poultices, plasters, and oint-  
ments, are seldom employed. A great atten-  
tion is paid to the position of injured parts: Mr.  
Liston makes this one of his essentials in treat-  
ment. The extremities are always considerably  
elevated on inclined planes above the level of  
the trunk, and the return of blood is thus fa-  
voured from the affected part. All fractures,  
lacerated and bruised extremities, sprains, ul-  
cerated, swollen, and inflamed limbs, are ma-  
naged upon this principle; and, according to  
the author, if so treated from the first, the  
action is kept under, the patients suffer com-  
paratively very little, and the parts regain their  
normal condition speedily, and with little fur-  
ther interference. Rest of the affected part is  
also essential to its recovery; and this is oc-  
casionally, but by no means so constantly as is

generally the case, secured by proper apparatus.  
Mr. Liston's principles in the use of hot  
and cold applications, are with the view of  
moderating the flow of blood, general oozing  
from any solution of continuity; and with the  
view also of preventing increased action of the  
capillaries of a part, as, after operations and  
injuries, cold is often applied with great ad-  
vantage; but, after inflammation is lighted up,  
a continuance, or recourse to this practice, he  
holds to be not beneficial. The action is mode-  
rated, sensibility of the part is diminished, the  
uneasy feelings abated, and the patient relieved  
and comforted much more by warm fomenta-  
tions. The effect of cold, on the contrary, is  
to constrict the surface, to drive the blood  
to the deeper parts, and to aggravate mate-  
rially the patients' sufferings. We think  
that there are few practical surgeons who  
will not feel the value and the justice of these  
observations.

In wounds which cannot be healed by the first  
intention, the muscles which act prejudicially  
upon the injured part are relaxed, as is also the  
integument on the aspect of the region impli-  
cated by position; the approximation of the  
edges is favoured, and it is occasionally ad-  
visable, as when there is great detachment of  
soft parts, to retain them somewhat in their  
natural position by a stitch, or by a strip of  
plaster. Discharge is to be promoted by all  
possible means; and this is done after the bleed-  
ing is arrested, by the application of a poultice,  
or of the water dressing, by which, all the  
beneficial effects of heat and moisture are af-  
forded, without any of the disagreeables at-  
tendant upon poultice, its weight, fœtor, &c.;  
astringents are to be cautiously added when the  
discharge is too profuse, or granulations too  
luxuriant. But when the surface of a granu-  
lating wound or ulcer is observed to be coated  
with adherent matter, whether this arise from  
local or constitutional disturbance, the soothing  
and simple warm-water dressing must again be  
resorted to.

In the treatment of wounds which may be  
expected to heal by the first intention, Mr.  
Liston's procedure is equally simple and ef-  
ficient. The sutures are few in number, and  
removed, at a very early period; the plaster is  
very adhesive, but unirritating. No pledgets,  
smears with ointment, or compresses, are ap-  
plied; and no bandage should be required, if the  
surgeon has had the sense to plan, and dexterity  
enough to make, his wound of a proper form  
and in the right direction, so that it shall fall  
together without pulling or strain upon the  
neighbouring parts. These are truly invaluable  
principles of surgery. One more of them, and  
we have finished. The wounded part, instead  
of being put under a load of dressing, which  
always interferes with the circulation, heats the  
part, encourages and retains discharge—thus  
giving the patient great annoyance from stench,  
great pain in their removal and reapplication,  
and imposing much harassing and unpleasant  
duty on the surgeon,—is, on the contrary,  
covered merely by a few strips of plaster, and  
lies cool and comfortable. The discharge, which  
is seldom in great quantities, is wiped up from  
the oiled cloth in which it lies; the fever  
does not run high; the patient is not subjected  
to the least pain; and the cure is speedily  
and pleasantly completed. If we have thus,  
to give an idea of Mr. Liston's labour in science,  
dwelt more with the principles of treatment than  
with the operative department, it is not because  
the work before us does not contain an abun-  
dant supply of new and valuable materials, but  
because such discussions are rather foreign to

our pages; while the really interesting and  
beautiful system of treatment, to which we  
have devoted a column, cannot be too widely  
disseminated, and is of importance, indeed, for  
every individual to be acquainted with. As to  
what regards the other part of the work, the  
profession will do it justice; for there is not in  
existence a manual of practical surgery which  
approaches it, in point of simplicity of detail,  
of accuracy of information, and of general  
utility. The engravings are remarkably well  
executed from drawings made with scientific  
accuracy. The practice of illustrating anatomi-  
cal and surgical, nay even pathological treati-  
ses by woodcuts, is a modern invention; and  
we cannot but express a fear that, by leading  
the student to rely upon them alone for inform-  
ation, they may lead to superficiality; but  
there will always be a restraint upon that igno-  
rance which is united to self-sufficiency, where  
a professional man undertakes to perform that  
which he is not well versed in, in the honest  
and candid language of difficulty and danger  
accruing from such malpractices, which is held  
in those professional works which, like the one  
before us, come from the pen of well-informed,  
practical, and able men.

*Hood's Comic Annual for 1837.* 18mo.

London, 1837. Bailey and Co.

HOOD, like merry old Christmas, coming once  
a year, is always, like merry old Christmas, a  
welcome guest—if we can call him a guest who  
furnishes all the entertainment. We hope we  
may be excused for wishing that he were with  
us the whole year round, not only for our own  
sakes, but for his; and particularly for that he  
might refresh his humour with new observation  
on passing characters and circumstances, rather  
than be thrown upon memories of the bygone  
in a foreign land and amidst foreign customs  
and manners. The native well-spring, it is  
true, is deep and copious; but it would not be  
the worse for being fed from novel sources till  
the sparkling run should overflow on every  
side: though a fountain is pretty enough, too,  
even when it receives its own waters back, and  
throws them up again in other mingled and  
fanciful jets.

The leading prose articles in this volume are  
entitled "The Carnaby Correspondence" and  
"Patronage." The former is a whimsical ex-  
posure of boarding-school trickishness and ma-  
nagement, as exhibited in the case of Master  
Bob Carnaby, the son of John—(a shocking  
bad speller, who "prays [praises] God his pore  
Muther is coald under the Hearth," as "it  
wud spile the rest of hir hashes if so be she  
cood read his tail of pewtered meet")—and  
nephew of Benjamin, a retired sea-captain,  
who visits him at Socrates' House School, Dr.  
and Mrs. Darby, and retires him, as he laugh-  
ably describes, from that worthy establishment.  
The latter caricatures, in a farcical way, the  
sufferings of a nervous man seeking patronage  
in removal from being superintendent of  
powder-mills; and painting his own and fa-  
mily's alarms and sufferings in a very ludicrous  
light.

A quaint story of an Irish passenger to Holy-  
head, who pretends he is brought off by the  
steamer without meaning to cross, as he had  
only come to inspect the accommodations, is  
cleverly told; and the other miscellaneous con-  
tents are equally amusing. As a specimen of  
the verse, we select—

"'Napoleon's Midnight Review.' A New Version.

In his bed, bolt upright,  
In the dead of the night,  
The French emperor starts like a ghost!

By a dream held in charm,  
He uplifts his right arm,  
For he dreams of reviewing his host.

To the stable he glides,  
For the charger he rides;  
And he mounts him, still under the spell;  
Then, with echoing tramp,  
They proceed through the camp,  
All intent on a task he loves well.

Such a sight soon alarms,  
And the guards present arms,  
As he glides to the posts that they keep;  
Then he gives the brief word,  
And the bugle is heard,  
Like a hound giving tongue in its sleep.

Next the drums they arouse,  
But with dull row-de-dows,  
And they give but a somnolent sound;  
Whilst the foot and horse, both,  
Very slowly and loath,  
Begin drowsily mustering round.

To the right and left hand,  
They fall in, by command,  
In a line that might be better dress'd;  
Whilst the steeds blink and nod,  
And the lancers think odd  
To be rous'd like the spears from their rest.

With their mouths of wide shape,  
Mortars seem all agape,  
Heavy guns look more heavy with sleep;  
And, whatever their bore,  
Seem to think it one more  
In the night such a field-day to keep.

Then the arms, christened small,  
Fire no volley at all,  
But go off, like the rest, in a dose;  
And the eagles, poor things,  
Tuck their heads 'neath their wings,  
And the band ends in tunes through the nose.

Till each pupil of Mars  
Takes a wink like the stars—  
Open order no eye can obey:  
If the plumes in their heads  
Were the feathers of beds,  
Never top could be sounder than they!

So, just wishing good night,  
Bows Napoleon, polite;  
But instead of a loyal endeavour  
To reply with a cheer;  
Not a sound met his ear,  
Though each face seem'd to say, 'Nap for ever!'

A paper on animal magnetism, happily ridicules that revived folly; and is illustrated by a cat sitting with its tongue out, attracting half a dozen birds from their nest on a tree. We transcribe a portion of it.

"Take the wildest freaks of the most fuddled, muddled, bewildered soaker,—such as 'trying to light his pipe at a pump'—attempting to wind up a plug with his watch-key—or requesting, from a damp bed in the gutter, to be tucked in—and are they a bit, or a wit, or jot, or what-not, more absurd, more extravagant, or more indicative of imbecility of reason, than the vagary of a somnambulist, gravely going through the back-gammon of reading Back's Journal, or a back-number of the Retrospective Review, through the back of his head? In case the great water companies alluded to should think proper to adopt the foregoing suggestions, the following genuine letters are placed very much at their service, as materials to be worked up into tracts:—

“(COPY.)

“To Mr. Robert Holland, Linen-Draper, No. 194  
Tottenham Court Road, London.

“Dear Bob,—Hoping you are well, and well-doing, we have heard such wonderful accounts in our parts lately about animal magnetising, without any clear notion what it is. My own notion is, it must be something new of my Lord Spenser's—Althorp as was—who was always very curious about his beasts. Others do say the Duke of Bedford, with a fresh cattle show—nobody knows. Now you are just at the fountain-head to learn, and as most of us down here is more or less engaged in breeding stock, it would be a main thing to be put up to the secret at its first start. Also whether it is

expensive to buy, and who found it out; and if likely to do away with oilcake and mangel wurzel, and such like particulars. Praise be blest, we are all stout and hearty, except your poor aunt, who died three year ago. Which is all the news at present from,

“Dear Bob, your loving Uncle,  
“REUBEN OXENHAM.

“(COPY.)

“To Mr. Reuben Oxenham, Grazier, Grasslands, near  
Lincolnshire.

“Dear Uncle,—I was agreeably surprised by your breaking silence, for I had made up my mind you was a distrest farmer gone off swan hopping (excuse the joke) to Swan River, or to get settled among the Dutch boars and lions at the Cape of Good Hope. Thank Heaven! such is not the case; though damped with my dear aunt's going off, I little thought, poor soul! the why and wherefore my goose, three Christmases ago, was the last! But we must all be cut off some day or other, which is a religious consolation for the remnants that are left behind. I have examined, as you desired, a sample of animal magnetism; which turns out to be the reverse of every thing you expect. Indeed, such might have been anticipated by a little forethought on the subject. There is nothing to describe about animals to such as you, that deal in them of all qualities; but it is quite likely that you have forgot all about magnets, since the days of your youth. But, perhaps, when they are named to you, your memory may serve to recollect little bone boxes, at sixpence a piece, with a blackamoor's head a-top, and a little bar of philosopher's steel inside, that points out the north, and sets a needle dancing like mad. It likewise picks up emery, and sticks fast to the blade of a knife. But that is all its powers are competent to—and of course on too small a scale to have any dancing, or lifting, or sticking effect on objects so big as bullocks, or even a pig, or a sheep. Accordingly, you will not be surprised to hear that animal magnetism has nothing at all to do with beasts or loadstones either; but it is all of a piece with juggling, quacksalving, and mountebanking, such as universal physic, spitting Coventry ribbons, tumbling, and posturing, thimble-rig, and the like fabrics. One of the principal tricks is sending people off to sleep against their wills; not so new a trick though, but it has been heard of years and years ago at Bow Street; and easy enough to perform any day, with a pint of porter,—provided one was rogue enough to want to hocus-pocus the money out of other people's pockets into one's own. To come to the point, there's an outlandish Count set up in it at the west end; and no doubt will realise a fortune. He has his carriage-people for customers, as well as Howel and James; indeed, I have heard of the Somebodies as well as Nobodies running after common fortune-tellers' tales, and not too high to be above going up into their back garrets. Some say he is a Frenchman, others say a German; but the last for choice, for he smokes enough to drive all the rats out of the neighbourhood. Besides, the Germans, I'm told, will believe any thing, provided it's impossible; which is some excuse for their wanting other people to give the same long credits; and, besides, Germans as well as French, and, indeed, all other foreigners, for that matter, though ever such honest people in the main; yet, when they do turn rogues at English expense, they invariably go more than the whole hog, namely, boar, sow, sucking-pigs, and all. So I determined to go wide awake, and to keep my eyes open, too, by not taking bit or sup in the house,

if offered ever so politely. It is, surely, not shewing disrespect to hospitality, to object to hocused victuals and drinks. I might have spared my fears, however; for there was nothing provided but the legerdmain, &c., and that was charged a guinea for, which you can repay at convenience. I preferred to see somebody else conjured before me; so another patient was taken first. She was a fine strapping young woman enough, dressed half-and-half between a fine lady and a servant-maid; but as sly-looking a baggage as you could select from an assortment of gipsies; and, unless her face belied her, quite capable of scratching a Cock Lane ghost. Indeed, something came across me that I had seen her before; and, if memory don't deceive, it was at some private theatricals contrary to law. For certain she could keep her countenance; for if the outlandish figure of a doctor, with his queer faces, had postured, and pawed, and poked towards me, with his fingers, for all the world like the old game of 'My grandmother sends you a staff, and you're neither to smile nor to laugh,' as he did to her. I should have bursted, to a dead certainty, instead of going off, as she did, into an easy sleep. As soon as she was sound, the Count turned round to me and the company with his broken English—'Ladies and gentlemen,' says he, 'look here at dis yoong maidens, Mizzi Charlot Ann Elizabet Martin,—for that is his way of talking,—wid my magnetismuses I tro her into von state of sombamboozleism,—or something to that effect. 'Mizzi Charlot Ann, dou art a slip.' 'As fast as a church, Mister Count,' says she, talking and hearing as easy as broad awake. 'Ferry goot,' says he. 'Now, I take dis boke,—Missis Glassee Cokery,—and I shall make de maidens read som little of him wid her back. Dere he is bytween her sholders. Mizzi Charlot Ann what you see now mit your eyes turned de wrong way for to look?' 'Why, then,' says she, 'Mr. Count, I see quite plain a T and an O. Then comes R, and O, and S, and T; and the next word is H, and A, and I, and R.' 'Ferry goot,' cries the Count over again. 'Dat is to roost de hare. Ladies and gentlemen, you all here? As Gott is my shudge, so is here in de boke. Now, den, Mizzi Charlot Ann, vons more. Vot you test in your mouse?' 'Why, then, Master,' says Charlotte Ann, 'as sure as fate, I taste sweet herbs chopped up small!' 'Ferry goot, indeed!—but what mor by sides de sweet herburs?' 'Why,' says she, 'it's a relish of salt, and pepper, and mace,—and, let me see—there's a flavour of currant jelly.' 'Besser and besser!' cries the Count. 'Ladies and gentlemen, are not dese vonderfools? You shall see every wart of it in de print. Mizzi Charlot Ann, vot you feel now?' 'Lawk a mercy, Mister Count,' says she, 'there's a sort of stuffy feel, so there is, in my inside!' 'Yaw! like van fool belly! Ferry goot! Now, you feel vot?' 'Feel! Mister Count?' says she, 'why, I don't feel nothing at all—the stuffiness is gone clean away!' 'Yaw, my shield!' says he, 'dat is by cause I take away de cokery boke from your two sholders. Ladies and gentlemen, dese is grand powers of magnetismus! Ach himmel! As Hamlet say, dere is more in our philosophes dan dere is in de heaven or de earth! Our mutter Nature is so fond to hide her face! Bot von adept, so as me, can lift up a whale! To shorten a long story, the sombamboozleism lasted for two hours; while Miss Charlotte Ann told fortunes in her sleep, and named people's inward complaints, and prescribed for them with her eyes shut. Mine was dropsy; and I was to take antimonious wine three times a-day,

*The Book of Beauty*, for 1838. With beautifully finished Engravings, executed under the Superintendence of Mr. Charles Heath. Edited by the Countess of Blessington. London, 1837. Longman and Co.

HAVING only enjoyed a casual glance at this year's *Book of Beauty*, we cannot say more of it than that it contains contributions from Mr. E. L. Bulwer, Mr. Procter, L. E. L., Mrs. Norton, Miss Sheridan, Lady Charlotte Bury, Colonel Caradoc, Mr. Ainsworth, Mr. Bernal, Lord William Lennox, Mr. B. Disraeli, Captain Marryat, Mrs. Fairlie, and the accomplished editor, Lady Blessington. Among others, we noticed a poem of considerable power and pathos, entitled "Dolorida;" and a shorter piece, on "Death," under a signature which is new to us; and, *pour encourager*, we select the latter for our exemplar of the verse.

"To Death. By Mrs. Torre Holme.

"Death! most desired, most lovely. To my ear  
The very sound is soothing. When alone,  
As a fond lover breathes the name most dear,  
Sinking his accents to their softest tone;  
Even so, amid deep silence, oft do I  
Utter thy name with hushed and trembling breath;  
And, listening to the night-winds rushing by,  
Await in vain an answer—gentle Death!

How lovely must thou be! Though some may fear  
To approach thee, and unveil thy hidden face  
Thy beauty maddens those who gaze more near,  
And thousands rush through crime to thy embrace.  
Thy lovers are the young, the passionate,  
The hearts that beat too quickly, who repine  
Through years of suffering and decay to wait,  
But snatch with eager haste at charms like thine!

Thou art a dangerous rival! and for thee  
The fairest are abandoned. Thou art known  
To draw even love from his fidelity,  
Making the beautiful and loved thine own.  
The golden portals of eternity  
Are in thy keeping; and thy thought must blend  
With every wish and aspiration high,  
That can from human hearts to heaven ascend.

Faith—Courage—Love! What are they until Death  
Stamps them with Truth's irrevocable seal?  
Mere words, depending on man's changing breath,  
Falsehoods the morrow may perhaps reveal.  
But thou art merciful; and in the hour  
Of mortal trial oft wilt interpose  
To place our virtue beyond frailty's power,  
Or shelter in the grave our guilt and woes!  
Thou art the truth—the certainty—the hope  
Of our mysterious being. Who could bear  
With their own passions and the world to cope  
In life's fierce warfare? if thou wert not there,  
Awaiting, like a mother, to whose breast,  
When all the tumults of the day-time cease,  
She takes her wearied children to their rest—  
Enfolds them gently there—and whispers, Peace!"

For the prose, we cannot suit our page better than with "*Apropos of Bores*," from the pen of Lady Blessington.

"*Apropos of bores*, how frequently is the pleasure of society injured, if not destroyed, by the bores who infest it! and how seldom can we recall a single day, the enjoyment of which has not been deteriorated by their intervention! One of the annoying peculiarities of bores is, to select the moment for relating some stupid anecdote, or for asking some silly question, when a witty, instructive, or interesting conversation is going on, to which one is desirous of listening. A particular instance of this vexatious propensity once annoyed me excessively; it occurred at a dinner given by my late worthy friend, Sir William Garrow. 'Pray, tell us,' said he to a man who sat near him, 'that adventure of yours in the wine-vaults of Lincoln's Inn, of which I heard a garbled account the other day.' I, who always liked an adventure, pricked up my ears at the sound; and the individual, thus questioned, commenced the following story. 'A friend of mine went to Madeira in an official situation, some years ago. He speculated largely in wine, and sent home several pipes, to be kept until his return. He wrote to request me to find them safe cellars; and I, in

consequence, applied to a friend, a barrister, to procure me permission to lodge the wine in the vast cellars of Lincoln's Inn Square. I was furnished with a key, that I might have ingress and egress to this sombre spot when I liked; and having, one day, a vacant hour in my chambers, it suddenly entered my head that I would go and inspect the wine *dépot* of my absent friend. Armed with the key, I sallied forth, and engaged the first porter I met to procure a candle, and accompany me to the cellar. You are not, perhaps, aware that these vast vaults are twenty feet beneath the square, and the entrance to them many feet, I believe one hundred and fifty, removed from any dwelling, or populous resort. We entered the gloomy cavern, and locked the door on the inside, to prevent any idle person who might, by chance, pass that way, from taking cognisance of the treasure it concealed. So great was the extent of the vault, that our feeble light scarcely enabled us to grope our way through its mirky regions; but, at length, we reached the spot where I knew the wine of my friend was deposited, and had the satisfaction of finding that the pipes were in perfect condition. We were preparing to return, when the porter, who held the candle, made a false step, and was precipitated to the earth, extinguishing the light in his fall. Never shall I forget the sensation I experienced at that moment! for the extent and tortuous windings of the vault impressed me with a rapid conviction of the difficulty, if not impossibility, of discovering the door. The alarmed porter declared in terror, that we were lost, inevitably lost, that he should never see his wife and children more, and cursed the hour he left the light of day to explore the fearful cave that would now become his tomb—a tomb, on which no fond eye would dwell; and he cried aloud, in an agony of despair, at his gloomy contemplation. I urged him to restrain his useless lamentations, and seek to grope our way in the direction of the door; and after having occupied full two hours in fruitlessly wandering through as many various and devious turnings as if in a labyrinth, we, at length, discovered the object of our search. 'Oh! God be thanked, God be thanked!' exclaimed the porter, with frantic joy, 'then I shall again see my wife, my little ones!' and he seized the key, which was in the lock, and turned it with such force that it snapped, the head remaining inextricably secured in the wards. 'Now, now we are indeed lost!' cried he, throwing himself on the ground; 'all hope is at an end, for we might knock and scream here for ever, without being heard. Why, why did I come with you? It is plain you are an unlucky man, whoever you are, and your ill fortune falls on me.' I tried to comfort him, though seriously alarmed myself; but he only became angry, telling me I could be no father or husband, to talk colly at such a moment, and with a certain prospect of death by famine staring us in the face. 'Oh, Lord! oh, Lord!' cried he, starting up in terror, 'the rats are gathering round; they will devour us before hunger has done its worst!' I have, all my life, had a peculiar antipathy to these animals; and confess that, when I found them stumbling over my feet, and heard them running at every side, an increased shudder of horror and fear chilled my blood. 'Let us stave in one of the wine-pipes,' said my companion, 'that we may forget, in the excitement of wine, the horrible death that awaits us. Yes, let us get drunk!' I refused to adopt this project; and my refusal again drew forth his reproaches on my being an unlucky man,

and his conviction that I had no heart in my body, as he expressed it, or no wife and little ones expecting me at home, or I would not take matters so easy. How many thoughts did I give to the dear objects to whom he referred, as I now dwell with anguish on the fearful probability of my never again beholding them! We searched in vain for a stone, or any other implement with which to wrench the lock or force the hinges, both of which resisted all our efforts. Hour after hour passed away. How interminably long appeared their flight! the silence only broken by the mingled reproaches and lamentations of my companion, and the increased noise of the rats, who now, becoming more courageous, assailed our feet. Each hour strengthened my conviction of our inevitable death in this horrible subterranean, where, probably, our mortal remains would not be discovered until every trace of identity was destroyed by the ravenous reptiles around us. My blood ran cold at the reflection, and my heart melted at the thought of them who were, doubtless, at that moment anxiously counting the hours of my unusual absence. I seized the arm of my companion, and — Here one of the company, proverbial for his obtuseness, and who repeatedly attempted to interrupt the narrative, seized my button, and in a loud voice said, 'How do you think, Jekyll, I should have got out?' 'You would have bored your way out, to be sure,' answered I, impatient at the interruption; and the more so, as, at this instant, the butler announced that the ladies were waiting tea for us. I ascended to the drawing-room, fully intending to request the sequel of the story; but a succession of airs on the piano, accompanied by the voices of the ladies, precluded the possibility of conversation. In a few days after I met some of the party, and questioned them respecting the conclusion. One declared that he had forgotten all about the story; another said that it had set him off to sleep, and so he missed the *dénouement*; a third avowed that, being deaf in the left ear, he had not heard more than a few words; and a fourth told me, that a tiresome man next him took that opportunity of giving him the particulars of a county meeting, as detailed in the morning papers, not omitting a single line. Consequently, to this hour, I am ignorant how the gentleman and porter escaped from the vault!"

A glance at the plates enables us to point out the portrait of Mrs. Wombwell, as being beautiful.

Since writing the foregoing, a copy of the work has reached us, to which (as it is too late for this) we shall turn our more deliberate attention next week.

#### MISCELLANEOUS.

*Briannia Ingrata; a Tribute to the Peninsular Army.* With an Introduction and Notes. By Major William Mackie. Small 4to. pp. 95. London, 1837. Boone.

THOUGH in poetry (and after the manner of Scott), this is a soldierly appeal, by a gallant officer of the gallant 88th, or Connaught Rangers, in behalf of his companions, who fought and conquered in the glorious war which freed Spain from her powerful invaders, and led to the consummation of Waterloo. Major Mackie thinks, with many, that the honours bestowed for military services were too limited, and that the heroes of the arduous struggle which he commemorates, ought to have been considered in their country's acknowledgments and memorials. Medals might yet be appropriately bestowed at the beginning of our young Queen's

reign; and national gratitude might be shewn by some proud and enduring monument, to grace the capital. Surely, of all parsimony, parsimony in gratitude is the least excusable; and, without criticising the verse, we may truly say, that the author has deserved well of his brave comrades.

*The Derbyshire Tourist's Guide and Travelling Companion; including an Account of the various Places generally visited by Strangers in the County of Derby, &c. &c.* By E. Rhodes, Author of "Peak Scenery," &c. Pp. 278. London, 1837. Goodridge; Sheffield, Ridge and Jackson.

DERBYSHIRE is, if not the most, one of the most interesting counties in England, and who so fit to act as a guide to its beauties and curiosities as the author of "Peak Scenery"? We accordingly find this to be an excellent performance; leading us pleasantly to the many picturesque, natural, and other features, worthy of being visited, from the splendid remains of antiquity and the wonderful cavern, to the dwelling of modern elegance and the simple attractions of the gushing waterfall and wooded dell. Even without going out of your library or reading-room, Mr. Rhodes's volume will supply a literary treat.

*The Theory of Electric Repulsion Examined, &c. &c.* By Charles Hales. Pamphlet, pp. 22. London, Taylor and Walton.

THE author attacks the theory of electric repulsion in the experiments which he has here recorded, and which he believes to contain some original and important discoveries in a branch of science which is one of the most seductive, for the various reasoning with which its various phenomena can be regarded. We cannot help thinking, while we abstain from entering into a discussion upon the experiments which Mr. Hales has brought before the public, that one of the numerous scientific societies which exist in the metropolis ought to have been the field which the author should have sought for truths, it would have saved him the expense of his pamphlet, and, if he is right, would have obtained for him greater and more immediate publicity and credit.

*Hannay and Dietrichsen's Almanack and Book of General Information, for 1838.* 8vo. pp. 72. (Hannay and Dietrichsen).—1838 is called the second year of "Victoria the First," a sort of pleonasm which we should like to see discarded; as, until there is a second sovereign of the same name, it is not merely unnecessary, but absurd, to designate the first by that distinction. Who ever talked of Elizabeth the First, or Anne the First? Having dismissed this blemish, we have to express our approbation of the Almanack. "The astronomical and geographical portions are full; and the customary notices of gardening, calendars, &c. &c., including parliament, the army, universities, the law courts, bankers in town and country, and a list of fairs, all very useful.

## ARTS AND SCIENCES.

### LINNEAN SOCIETY.

MR. FORSTER in the chair.—Specimens of *Erica ciliaris*, *Statice spathulata*, *Spartina alterniflora*, and of *Isolepis savii*, collected in the south and west of England during the last summer, were presented by Mr. Woods. Specimens of *Cereus senilis*, and of various species of *Echinocactus* and *Mammillaria*, collected by M. Deschamps in Mexico, were presented by Mr. Charlwood. Read, 'A Notice of the discovery of the *Cucubalus baccifer*, in the Isle of Dogs, by Mr. Luxford.' This interesting plant was found by Mr. Luxford in the early part of August last, growing on the banks of a ditch, near the road leading from Blackwall to Ferry House. The plant has long occupied a place in the British Flora, having been introduced by Dillenins into the third edition of "Ray's Synopsi," on the authority

of a Mr. Foulkes, by whom it was stated to have been observed by some person in Anglesea; but no one has met with it since in that locality, and, indeed, as appears by a letter from Mr. Foulkes to Dr. Richardson, published in the Linnean correspondence, vol. ii. p. 171, there seems no ground for believing that it was ever found in that island; and it has, consequently, been recently excluded from the British list. Read, also, 'A Memoir on the Family of *Fulgurides*, with a Monograph of the genus *Fulgura*, of Linneus, by Mr. Westwood.' This paper comprises descriptions of eight new species of the curious genus *Fulgura*, or lantern fly. A dutiful address to Her Majesty, on her accession to the throne, was read from the chair, and unanimously agreed to.

### GEOLOGICAL SOCIETY.

WEDNESDAY, NOV. 1. Dr. W. H. Fitton, V.P., in the chair.—The first paper read at this meeting was by Mr. Williamson, 'On the Remains of Fishes in the Coal-fields of Lancashire.' The author having, in a previous account of the Ardwick limestone, described the *Ichthyolites* found there, consisting of scales of *Megalichthys* and *Palaoniscus*, with teeth of the latter, has now come to the conclusion, in conjunction with Professor Johnstone, that the bed in which these occur is entirely a coprolitic mass. With the above was also described a tooth of *Diplodus gibbosus*. In this, as well as in another pit near Ringley, where the same roofstone occurs, one or two species of *Unio* were found, as well as remains of *Stigmaria ficioides* and *Calamites nodosus*, with other plants.—The next paper read was 'On the Geology of the Island of Zante,' by H. C. Strickland, Esq., which the author commenced by stating that the structure of this island is simpler than that of the other Ionian Islands, and that it presents an epitome of their component rocks in an almost unbroken series. The geological phenomena of Zante may be arranged under the three heads of—1. The Appenine limestone; 2. Tertiary deposits; and 3. Mineral springs. 1. The name of Appenine limestone is preferred for the vast deposit of the south of Europe, especially on the shores of the Adriatic, which is uniform in character for many thousand feet of vertical thickness and many hundred miles of horizontal extent. Its fossils, though rare, shew it to be the equivalent of the cretaceous, and, perhaps, also of the oolitic, series of Northern Europe. This light-coloured limestone, which extends in a ridge along the west coast of the island, often assumes the characters of the hard chalk of the North of England. No flints were found; but fossil remains, such as nummulites and fragments of hippurites, occasionally occur. It abounds in numerous faults and fractures, as well as caverns, and has been mistaken for the carboniferous limestone of northern Europe. 2. The tertiary beds repose on the eastern flank of the limestone range, extending thence to the eastern coast. They form several detached hills, rising through the alluvial matter which forms the central plain of the island. The uppermost strata consist of an aggregate of calcareous and arenaceous particles, forming a pale yellow porous stone, which is easily worked—containing a few fossils; and it is succeeded by a deposit of blue clay and marl, in which occur a few shells of *Pectunculus auritus*, *Statice glauca*, &c. Gypseous beds are found on the south coast of Zante; and the strata above them clearly belong to the Pliocene epoch, as many of their fossils are identical with those of the sub-Appenine hills. The

beds below the gypsum contain but few fossils, as crushed echini and obscure bivalves. In one situation a bed of indurated bluish marl contains shells of a *Hyalea* and *Creseis*, larger than the species *H. Cornea* and *C. Spinifera*, now living in the Mediterranean. On the west side of Port Cheri, a low argillaceous cliff, containing a few scales and vertebrae of fish, and a species of *Vermiculum*, has probably been brought down from some higher part of the tertiary series by the subsidence which seems to have formed the valley and bay of Port Cheri, and of which striking proofs may be seen in the parallel strata and hardened exterior smooth surface, on the small surface of a fault in the Appenine limestone which descends to the sea. 3. The mineral springs. The sources of bitumen for which Zante has been celebrated since the time of Herodotus, rise in the midst of the marshy plain at Port Cheri. The wells yield about 40 barrels annually. The bitumen oozes up from the bottom, and above it the well is filled by a spring of clear, cool, and tasteless water. These and other bitumen springs occurring in the neighbourhood of faults, and there being nothing in the composition of either the tertiary or secondary rocks to account for its production, the author infers that it is derived from the region of volcanic action, which may almost be demonstrated to underlie the Ionian Islands. The last paper read was by C. Darwin, Esq. on the formation of mould. The author commenced by remarking on the two most striking characters by which the superficial layer of vegetable mould is distinguished. These are, its nearly homogeneous nature, although overlying different kinds of subsoil, and the uniform fineness of its particles. This may be well observed in any gravelly country, where, although in a ploughed field, a large proportion of the soil consists of small stones, yet in old pasture land not a single pebble will be found within some inches of the surface. The author's attention was called to this subject by Mr. Wedgwood, of Maer Hall, in Staffordshire, who shewed him several fields, some of which a few years before had been covered with lime, and others with burnt marl and cinders. These substances, in every case, were now buried to the depth of some inches beneath the turf, as was ascertained by a careful examination of the several fields; and Mr. Darwin stated that the appearance in all cases was as if the fragments had, as the farmers believe, worked themselves down. But it did not appear to him at all possible, that either the powdered lime, or the fragments of burnt marl, and the pebbles, could sink through compact earth to some inches beneath the surface. Nor is it probable that the decay of the grass, although adding to the surface some of the constituent parts of the mould, should separate in so short a time, the fine from the coarse earth, and accumulate the former on those objects which had so lately been strewn on the surface. Mr. Darwin had also observed near towns, in apparently unploughed fields, pieces of pottery and bones some inches below the surface. So, on the mountains of Chili, he had been perplexed by marine elevated shells, covered by earth, in situations where rain could not have washed it on them. The explanation which occurred to Mr. Wedgwood of these phenomena, Mr. Darwin does not doubt to be the correct one, namely, that the whole is due to the digestive process by which the common earth-worm is supported. On carefully examining between the blades of grass in the fields where the observations had been made, the author found that there was

scarcely a space of two inches square without a little heap of the cylindrical castings of worms. It is well known that worms, in their excavations, swallow earthy matter, and, having separated the serviceable portion, eject at the mouth of their burrows the remainder, in little intestine-shaped heaps; hence the fine particles are brought to the surface, and the cinders, burnt marl, or powdered lime, would, by degrees, be undermined, and eventually become covered by what was previously the underlying earth. In a field on which cinders had been spread only half a year before, Mr. Darwin actually saw the castings of the worms heaped on the smaller fragments. On the above hypotheses, the great advantage of old pasture land, which farmers are always averse to break up, is explained; for the worms must require a considerable length of time to prepare a thick stratum of mould, by thoroughly mingling the original constituent parts of the soil, as well as the manures added by man. The author observes, that the digestive process of animals is a geological power of greater extent than might, at first, be imagined. In recent coral formations, the quantity of stone converted into the most impalpable mud by the excavations of boring shells, and of nereidous animals, must be very great. Numerous large fish (of the genus *Sparus*) likewise subsist by browsing on the living branches of coral. Mr. Darwin believes that large portions of the chalk of Europe has been produced from coral by the digestive action of marine animals, in the same manner as mould has been prepared by the same process on disintegrated rock.

## ELECTRICAL SOCIETY.

SATURDAY, Nov. 18.—Mr. Pollock read a paper, which may be styled Views on Electricity; but the title might not arrest the attention of our readers, nor induce that interest in their minds which the vast extent, the novelty of the views, and the importance of the subject, deserve. To bring the matter clearly before them, we will refer briefly to two former papers by the same author, before we proceed with him to follow out the investigations under the heads of the present one. The first treated of the "principle" of matter—the same cause, under different circumstances, producing the various phenomena of the different sciences. The "principle" was considered to be a fluid pervading all space, an universal cause, the basis of all phenomena of the sciences—vibration of matter, sound, and its currents; producing light, heat, electricity, magnetism, &c. The second paper pointed out the changes of form, attended by expansion and contraction, which the elements of a voltaic battery undergo, and the influence those changes exercise upon the electrical properties of matter so affected, if the theory of one fluid be true. Matter expanding becomes negatively—contracting, positively, electrified; the expansion attending the formation of the oxide of zinc being the primary cause of all the other changes of form in the battery. The objections raised against the author's theory of the action of the battery were, the want of experiments to shew the changes—chemical action was not the cause of all electric action—the phenomena may be explained by the properties of matter, independently of any fluid. The answers to these objections formed the commencement of the paper which is the subject of this notice. We will pass over the two former, merely observing, that chemical action was not considered the sole cause of electric effect, but that it was more deeply seated, and appeared to depend upon the vibra-

tion of matter which, disturbing the equilibrium of the fluid, produces electric action; and that, if it were based upon chemical action, it must be supposed that the atoms of matter undergo changes during vibration. The reply to the last objection stated, although it might be possible to explain the phenomena of the battery agreeably to the known laws of matter, yet probability is strongest in the existence of a fluid; and, if it be supposed that its parts are so intensely small that the attractive force between them and surrounding matter exceeds that of themselves for each other, all that is required to explain the phenomena of an electric fluid is possessed; for such matter must be highly elastic, diffusive, and strongly disposed to pass in the lines of least resistance. The subject was then continued in the following order: 1st. The influence of the transition of the metal zinc into the state of oxide, upon the remaining metal zinc. Oxide of zinc forming must contain a less quantity of the fluid than surrounding bodies, owing to the expansion of its constituent metal, and, therefore, must be in the negatively electrified state. The remaining metal, at the moment of giving off the oxide, must be in the opposite state, the positive, owing to induction, in common electrical language. The author objects to the term, as will be seen presently. Secondly was considered the influence exercised upon the copper by the zinc. The metal zinc, being positive to the oxide, will be negative to surrounding bodies, and, amongst them, to the copper with which it is in contact, agreeably to induction. 3dly. The transition of the hydrogen from the state in which it exists in water to that in gas. Hydrogen occupies space, in the states of gas and water, as 12,000 to 1; therefore, on its formation, must contain less fluid than surrounding bodies, and be highly negative. Here a question arises, how the hydrogen is brought into the positive state which it is, and must be, to be attracted to the negative pole of the battery? It may be said, that the negative copper renders it positive by induction; but, why the copper should exercise its inducing power peculiarly upon the hydrogen, and not upon the other components of the arrangement, is not explained. Induction here assists to the statement of the fact, but not to the discovery of the cause. The fourth part of the paper was devoted to a recapitulation of the effects, and remarks thereon; they cannot, however, be entirely omitted, consistently with the clear understanding of the inquiry; we will, therefore, state them as briefly as possible. It has been shewn, then, that expansion attends the transition of the metal zinc into its oxide; contraction, that of the oxygen from the state of water to that of oxide: expansion, that of the oxide and acid into that of the saline compound; and contraction of the metal zinc and, also, the copper. The doctrine of induction is generally given to explain the connexion of these changes, and the electric action of the battery. But the opinion of Mr. Pollock was, that the frequent use of the term has retarded the progress of electrical science. It may be useful to correct isolated facts; but it gives no insight into the cause by which the induced phenomena are produced: and he hoped that it would shortly be dispensed with, as it was rendered necessary by our ignorance alone. He then proceeded to the explanation of the action of the battery, by the theory of vibration. Every body must be supposed capable of undergoing vibration: to be positive while imparting the fluid during the contracting stage; and negative while receiving it in the expanding stage. The acid, acting upon the zinc to form

the oxide, tends to increase the expanding stage, and it will become highly negative. The fluid will be powerfully abstracted from the remaining metal, which, therefore, has its tendency to undergo the contracting stage increased. Whilst these stages exist, a current will pass between them: on its ceasing, the expanding stage commences in the zinc; it becomes negative, and absorbs the fluid from the copper, which, in turn, becomes positive, thus generating a current. When this ceases, the expanding stage begins in the copper; it is rendered negative, and absorbs the fluid from the solution, which becomes positive, and a current will pass between them. The foregoing was illustrated by a diagram. The effect of the vibration is a current existing through the arrangement, from the zinc to the solution, through the copper to the zinc again, keeping up a complete circuit. The vibratory theory also explains how the hydrogen is brought into the positive state, as before observed. On its being converted into gas, it absorbs the fluid from the solution; but, being gaseous and, therefore, elastic, it undergoes compression, becomes positive, and gives out its fluid to the negative copper. If the theory be true, it follows that, as the consumption of the fluid by the oxidation of the zinc is not met by an equivalent production within the battery, its action must depend upon its power of absorbing the fluid from surrounding bodies, and not of imparting it to them. Two facts—analogous instances—the formation of the deutoxide of hydrogen, as described by Mr. Faraday in the 728th section of his "Experimental Researches," and the conversion of a plain piece of steel into a magnet, were quoted in support of the foregoing statement, and considered to place upon an incontrovertible basis the dependence of the action of the battery upon its power of absorbing the fluid. It is true that there is no known experiment sufficiently delicate to determine the existence of vibrations, in consequence of the great velocity with which they occur in the different stages; thousands, or even millions occurring in a second of time. But if the theory of vibration be true, it follows that, as the positions and times of the two stages do not correspond, the fluid given out and absorbed, during the contracting and expanding stages respectively, will not be equal. As respects sound, which is allowed to be dependent upon the vibration of matter, La Place, investigating mathematically the phenomena, found that his results did not correspond with the facts, that the velocity of sound determined by observation exceeded what it ought to have been theoretically by 173 feet, or about one-sixth of the whole amount. This discrepancy arises from the increased elasticity of the air, in consequence of a development of latent heat during the undulations of sound. The heat given out during the compression of the air is not absorbed during the rarefaction that necessarily accompanies it, for the volume of air remains not permanently contracted nor compressed, but the same after as before. Thus, heat generated during the transmission of sound is a test of the presence of vibration. The phenomena of electricity are analogous. The heat generated by the voltaic battery denotes the vibration taking place in it in the same manner as that produced by the transmission of sound. Sound, electricity, magnetism, light, and heat, are each and all in connexion with a force or motion through matter, and, consequently, with its vibration. From the foregoing investigation Mr. Pollock drew two inferences, whose mutual influence upon the action of the voltaic

battery is most important. 1st. That by the vibration existing in the battery, fluid is disengaged, whereby it manifests heating power in its action upon bodies. 2d. That the battery, owing to the consumption of the fluid in it by the oxidation of the zinc, absorbs the fluid from bodies exposed to its action. From these inferences arises an inconsistent result; viz. that the battery imparts and receives fluids from bodies exposed to its influence; but relatively to them and their respective tendencies, batteries may be divided into two classes—of quantity and of intensity; the former heat and deflagrate metals and oxidise them, but possess no electric, no chemical action, giving no shocks, producing no decompositions, because, from the intensity of their vibration, their power of imparting the fluid to, overcomes that of abstracting it from, surrounding bodies: the power of the latter to absorb the fluid from bodies, exceeds that of imparting it to them, and the reverse effects are produced, their influence dependent upon vibration being much inferior to that of a quantity battery. Why does a small battery produce to electromagnets such extraordinary effects, which are scarcely exceeded by the action of a large battery? Because the interference arising from the heat disengaged during the vibration is proportionably less in the former, and the electric action is therefore greater. Why are sustaining batteries so well adapted for electromagnetic and decomposing purposes? Because so little interference arises from the fluid given off during vibration, by which their electric and decomposing action must be impeded; and why do batteries composed of metals and water alone, as those employed by Mr. Crosse, produce such wonderful effects, crystals thereby rivalling nature herself,—but because the interference of the action of heat, liberated during vibration, is so slight that the electric action goes on undisturbed? and no fact is better known than that the abstraction of heat favours crystallisation. An explanation is also afforded to the fact, that batteries prepared with sulphuric or nitric acid are short-lived, their intensity of vibration and accompanying production of heat tend to counteract themselves. The paper concluded with a few remarks upon the uncertainty attending the use of the terms, quantity and intensity, which is removed by the theory of vibration. When the fluid given off during the contracting stage is not counteracted by the expanding stage, effects, termed quantity, are obtained; when it is, those of intensity. Batteries composed of single pairs of plates are best for the former; those with numbers, or series of pairs, for the latter: and for the following reason—if each separate plate, in a battery for quantity, as Hare's Calorimeter, be considered to be undergoing vibration, contracting on one side or end, and expanding on the opposite, very little interference can occur between them; and this interference will be less as the size of the plate is greater. But, in a battery composed of a series, interference will occur between the different stages, and to a greater extent as the number of the series is greater. A diagram illustrated the foregoing result; and the conclusion deduced was, that, in a single pair, heating effects are in a greater ratio than the electrical and chemical: and, in a number of series, in a lesser ratio, owing to the power of the former to impart fluid to bodies agreeably to the first inference drawn, and of the latter to abstract it from them agreeably to the second inference.

## STATISTICAL SOCIETY.

OWING to some inexplicable conduct on the part of a functionary in the Statistical Society, we are this week prevented from giving a report of its proceedings. We shall endeavour to rectify matters so as to place this beyond any management or mismanagement in future.

## LITERARY AND LEARNED.

## UNIVERSITY INTELLIGENCE.

OXFORD, November 16th.—The following degrees were conferred:—

*Masters of Arts.*—J. W. Wing, Fellow of University College; Rev. W. Gildard, Worcester College; Rev. D. Brice, Queen's College; Rev. G. G. Harter, Trinity College; T. Blencowe, Wadham College; Rev. J. Davis, New Inn Hall.

*Bachelors of Arts.*—D. Scrutton, Worcester College; S. Minton, T. B. Adair, Exeter College; J. P. Scott, Balliol College; C. Clarke, Trinity College; J. B. B. Hankey, Merton College; R. E. Basset, Lincoln College; H. E. Michel, New College; A. Turner, Andrew's Exhibitioner, W. J. Williams, St. John's College.

CAMBRIDGE, November 15th.—Wednesday last, the following degrees were conferred:—

*Honorary Masters of Arts.*—Hon. G. W. Fitzwilliam, Hon. E. Pleydell-Bouverie, Trinity College.

*Masters of Arts.*—C. S. Bourhier, T. Bibby, St. John's College; R. Monteith, Trinity College.

*Licentiates in Physic.*—W. A. Guy, Pembroke College; H. A. Pitman, Trinity College; W. H. Ranking, Catherine Hall.

*Bachelor of Arts.*—F. Roberts, St. Peter's College; R. F. Wise, St. John's College; C. Maret, Pembroke College; J. Finlison, Queen's College.

## LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

*Monday.*—Royal Geographical, 9 P.M.; Medical, 8 P.M.

*Tuesday.*—Zoological, 8½ P.M.; Royal Medical and Chirurgical, 8½ P.M.

*Wednesday.*—Geological, 8½ P.M.; Society of Arts, 7½ P.M.

*Thursday.*—Antiquaries, 8 P.M.; Islington Literary, 8 P.M.\* (Mr. H. Innes on the Literature and Literary History of Great Britain.)

*Friday.*—Islington Literary. (Monthly Meeting.)

*Saturday.*—Royal Asiatic, 2 P.M.; Harveian, 8 P.M.; Westminster Medical, 8 P.M.

## FINE ARTS.

## NEW PUBLICATIONS.

*Elymas the Sorcerer struck blind.* Designed and drawn by Raffaele; etched on steel by J. Burnet.

THIS is the second of Mr. Burnet's series of plates from the Cartoons, in the new and hold style of etching, or engraving, to which we called the attention of our readers on the publication of his "Paul preaching at Athens." It appears to us not only to have that superiority to its predecessor, in point of mechanical execution, which practice must necessarily impart, but to evince a more frequent reference to the great original; of the spirit, dignity, character, and extraordinary expression of which, it conveys an admirable idea. By the by, unless we have been much misinformed, there is at Hardwick Hall, in Derbyshire, a very ancient mansion belonging to the Duke of Devonshire (in which the unfortunate Mary Queen of Scots was for some time imprisoned), a tapestry from the Cartoon of "The Beautiful Gate," containing, on the right side, corresponding with the three figures on the left side approaching the Temple, two magnificent females, and a man with a lamb on his shoulders,

\* This Society, by strenuous exertions, has succeeded in erecting a building calculated to reflect credit on the populous and wealthy neighbourhood in which it is situated. It contains a spacious reading-room and library on the ground floor, with corresponding rooms above (approached by a double flight of stairs), and is to be devoted to the museum, and for the monthly literary meetings. The class-rooms are in the basement, and afford every convenience for experiments and chemical processes. At the back of the main building is a theatre, which will contain, comfortably, 500 persons; the seats have each a back. The area being a semicircle on a parallelogram, every person has equal facilities for seeing and hearing. The Society consists, at present, of 300 members, but the impetus given to it by the opening of the new institution will at least double its numbers.

which are not now to be found in the Cartoon at Hampton Court. There can be no doubt that those figures were originally in the Cartoon; for who would dare to add to a composition of Raffaele? If this be true, it might be well worth Mr. Burnet's while to obtain his Grace of Devonshire's permission to avail himself of this tapestry, when he comes to his plate of the subject.

*The Sunshine of Love.* Painted by John Raoux;

Engraved by Samuel Cousins, A.R.A. Boys. RAOUX was a clever French painter of the seventeenth century, who, coming over to this country, was much patronised by some of the nobility. This was one of his most pleasing works; and it is unnecessary to add that it has been charmingly engraved by Mr. Cousins. A fair maiden is eagerly perusing a billet-doux, the reflection from which illuminates her expressive features. But what is that on the table? A snuff-box! To think of a "delicate creature" like this taking a sly pinch of Irish blackguard!

*Rome, and its surrounding Scenery.* Engraved by W. B. Cooke, and eminent Engravers, from Drawings by distinguished Artists. No. VII. Tilt.

THE present Number contains the most striking plate that has yet appeared in this interesting series. It is from a sketch by E. F. Payne, Esq. and represents the superb firework called the *girandola*. This has always been considered one of the most magnificent sights in Rome. It consists of the simultaneous discharge of many thousands of rockets from the summit of the Castle of St. Angelo. The illumination of St. Peter's by lamps, which display all the architectural features of that sacred and immense edifice, adds to the splendour of the scene. Mr. Cooke has been very happy in the imitation of the fierce streams of fire which sprout into the heavens, and then, bending gracefully downwards, burst into a myriad of beautifully shaped and sparkling lights.

*Louisa Cranstoun Nisbett, as the Young King.* Drawn and lithographed by J. Deffett Francis. Welch and Gwynne.

A SPIRITED whole-length portrait of this spirited and beautiful actress.

*New Hints, by an old Professor, on the Art of Miniature Painting.* 8vo. pp. 32. London, 1837. Ackermann and Co.

A VERY meagre and unsatisfactory production.

## BIOGRAPHY.

## THE EARL OF EGREMONT.

[From a Correspondent.]

SIR,—In your last Number of the *Literary Gazette*, a short notice was given concerning the patronage bestowed upon the fine arts, and upon artists, by the late Earl of Egremont; and I am encouraged by that notice to offer you some more specific information on the nature and extent of that patronage than is contained in it, and which may be acceptable to the public.

It is not necessary here to repeat the language of those numerous and just encomiums which have been published, since his lamented death, on those excellent qualities of heart and mind which peculiarly marked the general character of his lordship—the very image of truth and benevolence in the customary transactions of life; my intention being to speak only of his admiration and love of art, to shew the great extent of his favours towards the sons of art,

and the noble and patriotic views on which the patronage he so liberally bestowed upon both was founded. Lord Egremont's native affection for the fine arts was strengthened and confirmed by his having, when about eighteen years of age, resided for some length of time at Dresden and Vienna, with his father-in-law, Count Bruhl; when he constantly spent a portion of almost every day in the renowned galleries of those cities. His lordship thus became qualified to appreciate and enjoy the beauties and excellences of the important collection of pictures and statues which he inherited, and inclined to extend it during the whole course of his long and useful life. At first, he added pictures by the older masters; but, very long ago, he declared to the writer of this heartfelt eulogy a fixed resolution to buy, thenceforth, none but modern productions; observing, at the same time, that he could most beneficially patronise the arts, and render them useful and honourable to the country, by encouraging genius and talent sufficiently developed at home, and well worthy of support: and this amiable and patriotic resolution he steadily maintained. Hence are to be seen, in his extensive and valuable collection, upwards of two hundred modern British productions in painting and in sculpture; the greater part purchased by his lordship from artists now living, the rest at public or private sales, as circumstances permitted, or of the artists themselves, during their lives. Of these modern works, Petworth House contains 170 pictures, and 21 pieces of sculpture; and there are several others in his houses at Brighton and in London. This unrivalled display of patronage places the Earl of Egremont (without disparagement to some few others, actuated by the same generous feeling), at the head of all those who have kindly and wisely found pleasure in the possession of contemporary works of art, and ranks him greatest among the true patrons of its professors. But when the motives which frequently led to this munificent patronage is known, admiration and praise are lost in esteem and reverence. To learn that a man of genius was neglected and in trouble, was a sufficient inducement to lead him in search of the sufferer, and to purchase his works, even when he had scarcely room for those already in his possession; till at length he felt compelled, desirous of not ceasing to do good, to build a very extensive gallery for their reception, attached to his noble mansion at Petworth.\* And it was not only the interests and the reputations of ingenious artists that he thus upheld, but he benevolently consulted their feelings, by conducting these transactions with the utmost delicacy and secrecy; and never did a hint of the benefit he had conferred escape his lips, unless, when occasion required, in confidence to those whom he knew to be trustworthy. Neither did he attempt to guide the course of the arts (in the minds of artists) by preconceived ideas of their perfections, but cheerfully welcomed talent, however variously exhibited in the works of different men: not confining his support to one class of art, but encouraging all classes wherein genius and taste worthy of encouragement presented themselves. This will appear when it is known that the number of artists whose works contribute to form the above-mentioned mass, is forty-six painters, and eight sculptors; thirty-one of whom are now living to testify their gratitude, and all, earlier or later, were con-

\* Many circumstances, well known to the writer, might be adduced in proof of these assertions, and should be so, did not delicacy forbid it.

temporary with his lordship. How just the principle, how wise the conduct, let Greece and Italy declare; for it was by the same conduct, acting upon the same principle, that those countries obtained their envied pre-eminence in art, and established an enduring and exalted portion of their renown. Still more, Lord Egremont's kindness and favour to artists did not end here. Many, well known in the world of art, were annually, for a season, inmates of his princely palace; their pleasure being his delight, and the more their enjoyment the greater was the gratification of his lordship, testified by renewed invitations. What more worthy of respect and gratitude on the part of artists and the lovers of art can be recorded of any man, than is thus truly stated of him whose loss we now so deeply deplore—though, I trust, “not as those who are without hope?” Well may the remembrance of his name be precious to us. May his reward be with him!

T. P.

#### DRAMA.

THE varieties in the drama since our last do not require much specification; and we will just notice them in the order of time. At the *Olympic, Carlo, or, the Idiot Boy*, painfully sustained by C. Mathews, was found to be a subject incongenial to the public taste; and has been succeeded by a successful little piece called *Why did you Die?* in which Farren, without dying, ends admirably; and Mrs. Keeley, all life, keeps up the spirit of the farce with most natural excellence. At the *Haymarket, Wapping Old Stairs*, a naval melodrama, was, like *Carlo* elsewhere, discovered to be not quite the thing for that theatre, and has yielded to the dissent. In this the public has experienced no loss except in Mrs. Waylett's song. It is worth sitting through the poor dialogue to be delighted with her exquisite manner of singing that one song. *Drury Lane* gave us *Hamlet*, with Mr. Otway as the Danish prince, and the rest as miserably cast as *Coriolanus* was on Thursday (and worse was never seen). Of the personation of the hero we shall only remark, that the actor went beyond the poet's conception of the original, and shewed that he was more and oftener mad than when the wind was nor-nor-west; and, if he knew a hawk from a hand-saw, it was about the extent of his histrionic acquirements. *The Daughter of the Danube*, a grand ballet, has also been brought out here; touching which, the most remarkable matter is the absolutely outrageous character of the puffs upon it in the playbills and elsewhere; which really seem to have been written by some one in about the same condition of sanity with the *Hamlet* aforesaid. *Covent Garden* has proceeded on its straight and even course. *Macbeth, The Bridal, Henry V., &c. &c.*, have been done in the style they ought; and the first, in particular, in such a manner as to draw bumper houses every Monday night. At the other English houses, nothing new.

*Opera Buffa*.—On Tuesday, Rossini's opera, *L'Italiana in Algeri*, with its familiar, light, and pleasant music, was revived here. Mlle. Eckerlin made her *début*, and, in her middle notes, was all that could be wished, besides shewing that she was a finished musician. If she kept to her natural voice we think she would be still more attractive, as the attempt to sing low does not seem to suit her voice. Signor Sanquirio is a capital *buffo*, full of humour and drollery. He is, consequently, a great acquisition to this stage. We observe the fair Schiavoni announced: who would not be happy to see her?

#### VARIETIES.

*The Royal City Medal*.—Messrs. Griffin and Hyam's medal, in commemoration of the Queen's visit to the city, has now been published in bronze; in which it looks much more like her Majesty, and infinitely better, in every respect, than when we saw it in a bright pewtery sort of metal. It is, we observe from the notice, also struck in royal gold, silver, and bronze, gilt. In either it is a neat and fitting tribute for the memorable occasion.

*Fall of Stars*.—The phenomenon looked for on the 12th or 13th of November, has this year failed; and neither the meteors of Olmsted, nor the falling stars of America, have been visible. A magnificent aurora borealis was substituted.

*Earthquake*.—The shock of an earthquake was felt, October 30, 31, at Mulhausen: its course was from east to west.

*The Parliamentary Almanack for 1838*, on the face of a large sheet of paper, is to be noticed as another of those cheap forms which now issue from the press so abundantly.

*A Royal Dream of the Ninth of November* on pink paper (21 pages, Jennings publisher), is one of the most pleasant of pleasant *jeux d'esprit*; and, under the form of a dream, gives a very humorous account of the leading events of that day. Our present No., however, is (by chance) so addicted to witty productions, that we shall only add a taste-specimen of this clever performance.

“But who are they,  
Tell me, I pray,  
Ranged, bench above bench, as they sit at the play?  
'They, my liege,' was the prompt reply,  
'Are the Merchant-tailors' Company,  
Who, to do your puissant majesty homage,  
Have taken the field,  
With banner and shield,  
And all the finery they can rummage.'  
Said I, 'We should very much like to know  
How many men there be in a row.'  
Quoth the duchess, 'I can't, for my life, divine,  
But there's Mr. Spring Rice  
Will tell in a trice;  
He has but to count heads, and divide them by nine.'  
Then a page we despatched for that worthy to see,  
But as Rice could not tell, he  
Referred us to Kelly,  
Familiar with numbers than he.  
But the worthy cit was not without call,  
So we made the best of our way to Guildhall.”

*Strangers in France*.—Within the four months, from June to September last, inclusive, 600,000 passports have been viséd in France,—or rather more than 500 strangers per day. When one considers the sum of money which so great a multitude must spend, the benefit of national attractions to a nation becomes very obvious and important.—*From the Miroir de Paris*.

*Weather-Wisdom*.—The past eight days has been “all right:” now—“The 26th is stormy and colder. The new moon will bring increased cold and heavy falls of snow, or it may be much rain, with dense fogs. The 29th, foggy, and much rain or sleet. Changeable, with showers at the beginning, and a foggy atmosphere.”

*Astronomy*.—In the autumn of last year, M. Lamont applied the powers of the large telescope at the observatory of Bogerhausen, near Munich, to the planet Venus, but without being able to discover (although under the most favourable circumstances) any appearance of spots on her surface. He was, however, more successful in ascertaining the diameter of the planet Pallas, which appears to be 145 German miles, or 242 leagues, of 25 to the degree. M. Lamont has, also, been engaged in determining the elements of the orbit of the third satellite of Saturn, or that which revolves in one day nine-tenths; and has, also, applied his great telescope to the study of two masses of

stars; the one situated in the Shield of Sobieski, the other in Persens. M. Argelander has recently presented to the academy of St. Petersburg, a paper of the greatest importance; as it puts out of doubt the movement of our solar system towards a point very near to that which had been fixed upon by Herschel; that is to say, the point situated (in the constellation Hercules) at  $260^{\circ} 50'$  right ascension, by  $31^{\circ} 17'$  north declination. This result is founded on the proper movements of 390 stars; the annual proper movement of which exceeds the tenth of a second. This is one of the fruits of the short existence of the observatory of Abo, and is based on the fine catalogue of 500 stars, published in 1834, by M. Argelander.\*

*Of the Part played by Earths in the Act of Vegetation.*—Earth, it is well known, is not a simple element. The exterior layer, which is the support of vegetables, is generally formed of lime, silica, and alumina, to which earths are frequently added magnesia, oxide of iron, and the remains of organic matter, which gave the soil the highest degree of vegetative force. There exists no fertile soil consisting of a single earth, or even composed of only two earths. The union of three earths, in proper quantities, is indispensable to fertility. The earth which is found in the bottoms of valleys, in primitive soils, and which is the result of the decomposition of granites, is one of the most fertile, as well as the mud of rivers, formed of analogical elements. It follows that a soil is the more fertile in proportion as there enters into its composition a greater number of mineral elements, besides organic substances, the action of which is independent of the nature of earths. Some chemists, and Davy among them, have thought that the fertility of a soil depended on its hygrometrical state, that is to say, on the facility with which it attracted humidity from the atmosphere. Experience has, however, shewn that humidity is not an element of the fertility of a soil, but only a secondary condition, subordinate to its chemical composition.

*Maritime.*—Amongst numerous novelties in science, intended to have been brought forward at the last meeting of the British Association, at Liverpool, was one which is calculated to produce wonderful changes in navigation and commerce. Mr. Provis, of Chippenham, announces that he has matured a plan, on which he has been occupied for some years, to save vessels from shipwreck; to form life-boats and sea-floats; to lift ships over bars of sand and rock; to extinguish fires on board; and prevent other dangers and casualties to which officers, sailors, and cargoes, are continually exposed, and by which many hundreds of lives and thousands of pounds' worth of property are annually lost. We look for the particulars.

*Curious Experiment.*—Fill a medicine-phial (containing one or two pints) with water, and cork it in such a manner that there shall not be a single bubble of air between the water and the cork. Then take it by the neck, and strike the cork with sufficient strength to break the phial. If this experiment be made above a vessel, full of water, sufficiently large to collect the fragments of glass, it will invariably appear, whatever may be the nature of the glass employed, that the part which remains in the hand, and the fragments found in the water, are covered with fine incisions, like lines, which all start from the same point at the bottom of the phial, which diverge in every direction, and, proceeding, are lost in the neck. These

incisions or lines are as regular as those which could be produced by art, and present a curious appearance.

*Finland.*—The measurement of a degree in Finland proceeds slowly, in consequence of the numerous obstacles opposed by nature to the undertaking. All that has been accomplished during the last summer is the link between Cajane and Tornea, which was ineffectually attempted in the preceding year.

*Paris.*—It appears that the subscription for providing the means of supplying Paris with water, that immense undertaking so often projected and still postponed, has at length been placed in the hands of the Prefect of the Seine. At the head of the subscribers are some of the most considerable persons in London; among them, the last two lord-mayors.

*Ancient Anchor.*—A large and heavy body was lately taken from the bottom of the Seine, which proved to be a sea-anchor, in a state of oxidation. This mass, which does not weigh less than four hundred (French) pounds, is enveloped with a thick and closely adhering crust, formed of gravel, flints, clay, bones, petrified wood, &c.

*Organic Chemistry.*—M. Dumas, the French chemist, has announced to the Académie des Sciences a vast scheme of scientific investigation which, after much consideration, has been projected by himself and M. Liebig, a young and distinguished German chemist. They intend to analyse all substances which have not yet been analysed, and to submit to rigid examination all analyses which have hitherto been made. Their chief object being accurately to characterise different bodies, they will especially apply themselves to the discovery of the reactions proper to each of them, to determine their atomic weights. These two savans have, for some time, been preparing fellow-labourers full of zeal, by opening their laboratory to all young persons animated by a true love of science. The British Scientific Association has shewn itself very favourable to this extensive and important undertaking.

*Royal Bon Mot.*—During a recent morning visit at Buckingham Palace, the Duke of Wellington, in the course of chat, was asked by the queen the name of the kind of boots which he wore. His grace laughingly answered, that he believed people called them Wellingtons. "Well!" replied her majesty, "that is presumptuous; for where, I should like to know, will they find a pair of Wellingtons?"

## LITERARY NOVELTIES.

In the Press.

A new cabinet edition of Walton's Lives of Donne, Wotton, Hooker, Herbert, and Sanderson, with illustrated plates. The Book of Family Crests, to contain the Blazon of every bearing, with Mottoes and Engravings. A new edition of the Rev. Mr. Forster's Life of John Jebb, D.D., the late Bishop of Limerick.

### LIST OF NEW BOOKS.

The London Dispensatory, by A. T. Thomson, M.D., F.L.S., G.S., new edit. 8vo. 2s.—The Evidence of Prophecy, by Alex. Keith, D.D., sixteenth edit. 7s.—A Treatise on Conic Sections, by J. Hymers, M.A., 8vo. 6s. 6d.—A Dissertation on the Causes and Effects of Disease, by H. C. Barlow, M.D., 8vo. 3s.—A Lecture on Education, by W. B. Hodgson, 12mo. 4s.—A List of Electors for the Western Division of Surrey, with a Statement of the Poll, 8vo. 3s.—A Treatise on the Elements of Algebra, by J. Bryce, Jun., M.A., F.G.S., 12mo. 4s. 6d.—Institutes of Surgery, by Sir Charles Bell, Vol. I., 12mo. 7s.—Parliamentary Pocket Companion, 1838, 32mo. 4s. 6d.—Gems from British Poets (32mo), 32mo. 2s.—Ditto, ditto, Chaucer to Goldsmith, 32mo. 2s.—The Doctrine of Election, by T. Erskine, 12mo. 6s. 6d.—Sermons on the Apostles' Creed, by Rev. G. A. Poole, 8vo. 10s. 6d.—Changes produced in the Nervous System by Civilisation, by R. Verity, M.D., 4s.—G. F. Morgan's First Principles of Surgery, Part II. 8vo. 5s.—The Hand-Book of Natural Philosophy, by W. M. Higgins, 18mo. 1s. 9d.—Bechstein's Natural History of Cage Birds, new edition, 12mo. 7s.—Welsh's Treatise on Ringworm, 8vo. 5s. 6d.—Mechanics

of Fluids for Practical Men, by A. Jamieson, LL.D. 8vo. 15s.—The Himalaya Landscape Album, Morocco, 2s. 2s.—The Elements of Algebra, by Hind, 3d edition, 8vo. 12s. 6d.—The Napoleonic Medals, 564 Medals, by A. Colla, folio, 3l. 13s. 6d.—proofs, 15s. 6d.—Thoughts on Religion, a Poem, 8vo. 5s. cloth.—Walsingham, the Gamester, by Capt. Chamier, 3 vols. post 8vo. 1l. 11s. 6d.—Sermons for Children, by Mrs. Markham, fcap 3s. hf.-bd.—Abridged History of Treaties of Peace, by Capt. Furneaux, 8vo. 12s.—First Book of Algebra, 18mo. 1s. 6d.—Luther and his Times, by the Rev. J. E. Riddle, fcap 5s.—Companion to Euclid, being a help to first Four Books, fcap 4s. cloth.—The Juvenile Budget, by Mrs. S. C. Hall, square 18mo. 6s. cloth.—Rambles in the Footsteps of Don Quixote, by H. D. Ingils, illustrations by Cruikshank, post 8vo. 9s. cloth.—Hints to Servants, by a Bachelor, 32mo. 1s.—Commentaries on the Colonial and Foreign Laws, by W. Burge, 4 vols. royal 8vo. 6l. 6s.

## METEOROLOGICAL JOURNAL, 1837.

	Thermometer.	Barometer.

## TO CORRESPONDENTS.

SIR,—I perceive that your correspondent has met with an answer to his inquiry, as to "coring" of [s]words, but not a satisfactory one. Allow me, therefore, now to try another cast, which, indeed, I would have done before, but that I conceived the information might have been obtained from some more competent authority; nay, possibly, that the querist himself might, upon mature reflection, have discovered the solution of his difficulty. How probable was my surmise, appears from his letter in your journal of this day, in which he traces a connexion (which, to me, appears the very answer to his doubts) between "coring" and "coursing." He misses a perfect solution only because he stops short at the first and obvious meaning of course, viz. a race. I have not time now to go into full detail of all that the subject would lead to; but it may probably answer the purpose to remind your correspondent that the term is still in use in some parts of the country, in connexion with "horse;" as *horse-coursing*, a jobber in horses. This word occurs in Johnson, who, however, makes two mistakes; first, that of confounding *horse-coursing* with *horse-cotter* (cower being identical with the German *kauf-mann*, or the Dutch *koop-mann*); and, secondly, that of supposing that the cower was an *exerciser* or *runner* of horses. Reference may be likewise made to Ash, Blount, and most of the old lexicographers. Junius is cited by Johnson. Bailey has "coursing," which he gives as old French of the same import. But, perhaps, the most satisfactory conjectures as to the descent of the word are to be found in Jamieson's Scottish Dictionary (verbiis, *curs* et *cours*). If it be true that the root signifies an *exchange*, quasi a *double election*, the explanation of "coring" or *coursing* a garment for a sword is precisely parallel to our modern version of the Gospel, in which the command is, "He that hath no sword, let him sell his garment, and buy one."

I am, Sir, Yours, &c.

18th Nov. 1837.

W. C. D.

ERRATUM.—In the notice in our last No. of "The Interior of the Chancel of Stratford Church," the phrase, "the plate will appear at a future period with finished effect," ought to have been a parenthesis; and there ought not to have been any stop after "effect."

R. S. declined.

\* The great change in the temperature on the 29th and 30th is worthy of particular remark.

\* A valuable prize was lately given to M. Argelander, by the Academy of St. Petersburg, for this catalogue.

# ADVERTISEMENTS, Connected with Literature and the Arts.

**PRIZE ESSAY.**  
**BRITISH AND FOREIGN ABORIGINES PROTECTION SOCIETY.** In reference to an Advertisement issued by the Committee of this Society, offering a Prize of \$04. for the best Essay received on or before the 31st of December next, "On the Present State of the uncivilised and defenceless Tribes; the causes which have led to a diminution of their Numbers, and their debased Condition; and the best Means of protecting them, and promoting their Advancement," the Committee hereby give Notice, that in consequence of the recent Publication of the Parliamentary Report on the Aborigines (British Settlements), they deem it desirable, in justice to the cause in which they are engaged, as well as to the Candidates, to lengthen the time allowed for preparing this Essay, and have therefore resolved to extend the period for receiving Essays for competition, until the 31st of December, 1838.

(Signed) T. FOWELL BUXTON, President.

In a few days will be published,  
**The Parliamentary Report on the Aborigines** (British Settlements), with Comments, &c., by the Committee of the above Society. May be had of William Ball, Aldine Chambers, Paternoster Row; and Hatchard and Son, Piccadilly.

**BRITISH LIBRARY, 24 Cockspur Street.**  
**NEW BOOKS.**—The Nobility and the Public are respectfully informed, they can be supplied with all the New Publications, French and English, as soon as published, at Cawthorne's British and Foreign Library, 24 Cockspur Street, where Terms and Catalogues may be obtained. From the very great number of Books taken at this extensive and old established Library, all Works, as soon as the demand for the first circulation has subsided, may be had, perfectly clean for binding, at half the publication price.

Book Societies supplied on the most reasonable terms.

Just published,  
**THE PERUSAL OF NEW BOOKS.**  
A new Plan (founded on the German and Prussian model of circulating new Books) for the constant and regular monthly supply in Town or Country of all New Works as soon as published. Subscribers are assisted in the choice of new Books by the publication of select Monthly Lists, and participate in the advantages derived from an extensive Publishing Business being conducted in connexion with the Library. Families may unite in a single subscription, and Book Societies are supplied throughout Great Britain. Terms and Particulars, as a single letter, on application (post paid) to Saunders and Otley, Publishers, Conduit Street, Hanover Square.

**OLD BOOKS BOUGHT.**—A liberal Price in Cash (before removal) given for Libraries and Parcels of Books, in any part of the Country.

**Old Books Sold.** Now ready, Catalogues of extensive Collections on Theology and Ecclesiastical History; of Classical and Foreign Literature; and of Miscellaneous English Books; comprising about 14,000 Volumes, recently purchased.

**Old Libraries Repaired and Beautified.** The bindings of old books restored to all their original beauty and antiquity, at one quarter the price of rebinding.

Libraries Valued on moderate Terms.

W. White, 23 Wilderness Row, Charterhouse, London.

\* \* \* Letters post paid. Catalogues gratis.

**BOOKS AT REDUCED PRICES.**

Book Buyers are requested to procure No. I. of  
**JOHN RUSSELL SMITH'S OLD BOOK CIRCULAR,** published this day Gratis, containing 300 Valuable Books at very reduced prices. It will be regularly forwarded to any gentleman who will favour the publisher with his address, in town gratis, into the country by single letter postage, on application at No. 4 Old Compton Street, Soho Square.

The whole-length Portrait of  
**HIS GRACE THE DUKE OF WELLINGTON, K.G., &c. &c.**

Engraved by G. H. Phillips, from the Original Picture recently painted for the Junior United Service Club, by J. Simpson.

Prints, 11. 11s. 6d. Proofs, 3s. 3s.; Before Letters, 5s. 5s.

"This is a good and pleasing likeness, representing his grace in that unostentatious costume which he generally wore in the Peninsular War, and in every respect preserving that character of simplicity which is so remarkably his."—*Herald*.

"As an Engraving it deserves the greatest praise, for it is finished even to the minutest details. Those who are admirers of the duke—who do not admit him as a soldier?—will do well to purchase this military print of the first warrior of the age."—*Sun*.

London: Hodgson and Graves, Printersellers, by special Appointment, to Her Majesty, 6 Pall Mall.

## BOOKS IN THE PRESS.

On the 1st of December, 1837, will be published, No. I. of a New Series of  
**THE PHRENOLOGICAL JOURNAL,** and continued Quarterly, price 2s. 6d.  
London: Simpkin, Marshall, and Co.

48 Great Russell Street, British Museum.  
On the 20th inst. will be published,  
**SCHLOSS'S UNIQUE CHRISTMAS and NEW YEAR'S PRESENTS.**  
Size, Three Quarters of an Inch, by Half an Inch.

THE ENGLISH  
**BIJOU**  
**ALMANACK.**  
For 1838.  
By L. E. L.

Beautifully bound, gilt edges, in a highly embellished case, 1s. 6d. Elegantly bound, in extra illuminated Morocco or vellum, 3s. Extra Cases, in velvet or Morocco, 3s. 6d.  
Ditto, ditto, Morocco, elegantly illuminated, and beautifully gilt, 5s. 6d.

Ditto, ditto, fastened with Springs, 7s.  
A powerful microscopic Eyeglass (of half an inch focus), in tortoise-shell, corresponding in size to the Almanac, 1s. 6d.  
Ditto, ditto, folding in a tortoise-shell Case, 3s.

This year, this curiosity in art will be found to inshrine, besides the usual Contents and Information of an Almanack, subjects which gratefully remembrance and living loyalty, which literature and genius, which music and song, may recommend, even in "little," to the general breast; for the Portraits of Her Most Gracious Majesty the Queen Victoria, and of William IV.; of Noct and London, of Mozart and Grisi, and its Embellishments. Miniature, it is true, may, next to the miniature; but, like the game of the antique, it is hoped that they lose nothing of their excellence by their extreme smallness.

For the poetry, with one exception, the proprietor is again indebted to the pen of L. E. L.

Entirely new and most appropriate Companion to the English Bijou, enclosed in a neatly embellished Case, 12mo, price 2s. 6d.

**Album Tablets.**  
Six elegant and highly imaginative Arabesque Designs, in the English Bijou Almanack for 1838. Designed and etched on Steel, by T. H. Jones.  
London: A Schloss, 48 Great Russell Street, British Museum.

48 Great Russell Street.  
On the 29th inst. will be published, dedicated to Sir Charles Boscawen Clarke, Bart. M.D. F.R.S., 3d edition, and much enlarged, 3mo, royal, neatly bound in cloth, price 2s. 6d.  
**THE MARRIAGE ALMANACK,** and Mother's Manual, with an Appendix, containing a perpetual Calendar for calculating the duration of Gestation.  
By an ENGLISH PHYSICIAN.

In 4to. post, price 3s.  
Supplement to every Almanack of the Year 1838! Comprising a beautiful Chart of the apparent Path of the Planets for the year 1838, with full Directions and Explanations; Fifty-seven Engravings on Wood, delineating a great variety of the most striking groups of Fixed Stars, from the principal Constellations; an Almanack, and other useful Information of the year; the whole being a novel and interesting guide to a knowledge of the heavens, and may especially claim the attention and recommendation to be used in schools.  
London: A. Schloss, 48 Great Russell Street, British Museum.

1 vol. 12mo. demy boards, price 2s. 6d.  
**Introduction to the First Elements of Chemistry,** for the use of Students. By Dr. Justus Liebig, Professor of Chemistry at Giessen. Translated from the German, by T. Richardson.

**SPLENDID ANNUAL, 1838.**  
**FINDENS' TABLEAUX;**  
or, Picturesque Scenes, illustrative of National Character, Beauty, and Costume, with large and beautifully engraved Plates.  
Edited by MISS MITFORD.  
Author of "Our Village," &c. &c.  
"Regally gorgeous—the literature is choice in kind. The little stories, and especially Miss Mitford's contributions—"English Edith," for instance, with her happy loves; and the piquant "Wager,"—are exactly of that light and graceful description which is most suitable to such works as the present."—*Tait's Magazine.*  
"An Annual of the same class to which the 'Flowers of Loveliness,' and the 'Gems of Beauty,' belong, and it is superior to both in its plan and execution."—*Spectator.*  
Imperial 4to. splendidly bound in morocco, 51. 2s.; India Proofs, 51. 3s.  
Charles Tilt, Fleet Street.

Price 11. 11s. 6d.  
**THE AUTHORS of ENGLAND.**  
Fifteen large and beautiful Plates, engraved in the new Bas-relief Style, with Biographical and Critical Sketches.  
By HENRY F. CHORLEY.  
Author of "Memorials of Mrs. Hemans," &c. &c.  
A few Copies with India Proofs, 51. 12s. 6d.  
"The Authors of England" is an Annual of the first magnitude and importance. It is composed of a group of fourteen of the most popular writers of poetry and fiction in our own times, departed as well as living—each set in a rich frame-work of tasteful device. The volume is superbly got up; the embossed cover, with its handsome badge, is very elegant."—*Spectator.*  
"This, for the present season, shall be our annual. The plates are exquisitely engraved."—*Athenaeum.*  
Charles Tilt, Fleet Street.

Price One Guinea,  
**THE ORIENTAL ANNUAL.**  
By the Rev. HOBART CAUNTER, B.D.  
With Twenty-two Engravings, from Drawings by the late William Daniell, R.A.  
Elegantly bound in morocco, large paper, with Proof Plates, 51. 12s. 6d.  
"In point of binding, gilding, and ornament, 'The Oriental Annual' has hitherto been gorgeous, while its plates are always in a first-rate style, and eminently illustrative of the glorious East. The volume now before us, we are inclined to think, excels in these particulars."—*Monthly Review.*  
"It is scarcely possible to imagine a more beautiful book: the binding is perfect."—*Literary Gazette.*  
Charles Tilt, Fleet Street.

Price 2s. 6d.  
**THE COMIC ANNUAL for 1838,**  
Illustrated with Twelve humorous Plates by George Cruikshank; a Hieroglyphic, and other embellishments, with a great variety of amusing matter.  
\* \* \* Copies of the Almanacks for former years, neatly bound in 2 vols. cloth, price 12s., may still be had.  
Charles Tilt, Fleet Street.

**NEW WORKS JUST PUBLISHED,**  
By Richard Bentley, 8 New Burlington Street,  
Publisher in Ordinary to Her Majesty.

I.  
**The Nabob's Wife.**  
By the Author of "Village Reminiscences." 3 vols.

II.  
**Walsingham, the Gamester.**  
By Captain Chamier, R.N.  
Author of "Ben Brace," "Life of a Sailor," &c. 3 vols.

III.  
**The Squire.**  
By the Author of "The Merchant's Daughter," "The Heiress," &c. 3 vols.  
"A clever and attractive novel."—*Athenaeum.*

IV.  
**MRS. TROLLOPE'S NEW NOVEL.**  
**The Vicar of Wrexhill.**  
3 vols. with numerous illustrations by Harrison.  
"A singularly clever work. The conduct of the story is capitally arranged, and the events are extraordinarily striking and real."—*Times.*

V.  
**Traditions of Chelsea College.**  
Including Anecdotes and Adventures of Military Life.  
By the Rev. G. R. Gleig,  
Author of "The Subaltern," "The Country Curate," &c. 3 vols.  
"From the first announcement of this new work, we predicted that it would prove a rich intellectual treat, and its personal has fully realised our anticipation. Every page teems with incident and adventure."—*Sunday Times.*

13 Great Marlborough Street, Nov. 25.  
**MR. COLBURN** has this day published the following New Works:—

I.  
**Mary Raymond, and other Tales.** By Mrs. C. Gore, Authoress of "Mothers and Daughters," &c. 3 vols.

II.  
**Miss Pardoe's "City of the Sultan."** New Edition, in 3 vols. post 8vo., with all the illustrations to the former impressions.

III.  
**Jane Lomax; or, Love and Crime.** By the Author of "Brambletye House," "Reuben Apsey," &c., 3 vols. (just ready).

IV.  
**The Bench and the Bar.** By the Author of "Random Recollections of the Lords and Commons," &c. 1 vol. post 8vo.

## MR. BULWER'S NEW NOVEL.

Now ready, in 3 vols. post 8vo.

## ERNEST MALTRAVERS.

By the Author of "Pelham," "Eugene Aram," "Rienzi," &amp;c. &amp;c.

"Every work of Mr. Bulwer's is another step in the progress of his own and his time's mind. 'Ernest Maltravers' is a choice subject, particularly adapted to his powers: it is the history of a mind, and a mind of genius. Who can understand its workings better than he whose mind is cast in the very mould he draws?"—*Literary Gazette*.

"It contains many splendid passages, which will excite feelings of a higher kind than those which result from the perusal of mere fiction."—*Atlas*.

"It is a masterly creation, and carries a sense of the pure mind of Mr. Bulwer to the highest point."—*Court Journal*.

"It promises to be one of the most popular of Mr. Bulwer's popular novels."—*News*.

"It is not possible but that it must become a standard work."—*Morning Chronicle*.

## II.

## MISS MARTINEAU'S NEW WORK.

Now ready, 2d edition, in 3 vols. post 8vo.

## SOCIETY IN AMERICA.

By HARRIET MARTINEAU, Author of "Illustrations of Political Economy."

"This book will sustain the great reputation of Miss Martineau, both as a sound scientific observer on questions of moral and political philosophy, and as a writer of first-rate descriptive powers."—*Examiner*.

"For many a year no work of deeper public interest, nor more adapted and worthy to exercise extensive influence over modes of political thought, has issued from the British press. It should be studied by every legislator, nor is there any class of the community that may not derive from it suggestions of essential utility."—*True Sun*.

"It is the best, the truest, the fullest, and most philosophical work that has yet appeared on the social condition of the United States."—*Spectator*.

"It is full of instruction, it exhibits great acuteness, and we cannot read many pages without feeling a respect for the author. Her book must do good, and we cordially recommend it to all our readers."—*Atlas*.

"It is the most amusing and most reflecting work that has hitherto been published by the English traveller on America."—*Court Magazine*.

"No one who wishes to form a correct and enlarged view of the character, institutions, resources, and prospects of America, should fail to peruse Miss Martineau's volumes."—*Eclectic Review*.

SAUNDERS AND OTLEY, CONDUIT STREET.

In 2 vols. 8vo. with Maps and numerous Plates by Major C. C. Michell, K.H. 32s. bound,

## CAPTAIN ALEXANDER'S NARRATIVE

OF AN EXPEDITION TO THE COLONIES OF WESTERN AFRICA, AND ACCOUNT OF THE KAFFIR WAR IN 1836.

"A most interesting account of the Colonies of Western Africa."—*John Bull*.

"This account of the Kaffirs and their country is the most ample which has yet been laid before the public."—*Literary Gazette*.

"This admirable work is written in a plain, manly, and vigorous style. It abounds with subjects of striking interest, both in a national and private point of view, and is likely to obtain that popularity which it so well deserves. Capt. Alexander has acquitted himself ably in all respects, and justifies the selection which was made of him by the discerning patronage of government."—*Messenger*.

HENRY COLBURN, PUBLISHER, 13 GREAT MARLBOROUGH STREET.

To be had of all Booksellers.

## THE PENNY SUNDAY READER.

The Fifth Volume (for January to June, 1837), is just published, price 2s. 6d. in cloth boards. The Work is continued in Weekly Numbers, and forms a cheap Manual of Sunday Reading, adapted to the sacred character of the Lord's Day, especially connected with its devotional offices. It contains, also, Miscellaneous Papers, Sacred Poetry, original and selected, Choice Extracts from Eminent Divines, and Communications from Correspondents.

Rivingtons, St. Paul's Churchyard, and Waterloo Place; and sold by all Booksellers.

\* \* \* The Volumes of this Work are included in the List of Books recommended by the Society for Promoting Christian Knowledge.

The Holy Bible Chronologically Arranged. Handsomely printed in Four large vols. 8vo. price 8l. 18s. in boards, a new edition, with Marginal References, of

THE OLD AND NEW TESTAMENT, arranged in Historical and Chronological Order, in such manner that the Books, Chapters, &c. &c. may be read as one connected History, in the very words of the authorised Translation. With copious Notes and Indices.

By the Rev. GEORGE TOWNSEND, M.A. Prebendary of Durham, and Vicar of Northallerton. Printed for J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

\* \* \* The Old and New Testament may be purchased separately; and the same Work, with short Notes, may be had in one large volume, price 1l. 4s. in boards.

In 2 vols. 12mo. price 14s. boards, the 2d edition of A COURSE OF SERMONS FOR THE YEAR.

By the Rev. CHARLES GIRDLSTONE, M.A. Rector of Alderley, Cheshire. London: Printed for J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall; and sold by J. H. Parker, Oxford.

Also, by the same Author,

1. Twenty Parochial Sermons. First Series, 2d edition, 12mo. 6s.
2. Twenty Parochial Sermons. Second Series, 2d edition, 12mo. 6s.
3. Twenty Parochial Sermons. Third Series, for particular Occasions. 12mo. 6s. 6d.

## GILBERT'S CLERICAL GUIDE.

In one vol. royal 8vo. price 1l. 2s. in cloth boards, a new edition of

## THE CLERICAL GUIDE, AND

ECCELESIASTICAL DIRECTORY: containing a complete Register of the Dignities and Benefices of the Church of England, with their respective Values, founded on an average of three years; and exhibiting the names of the Incumbents, Patrons, and Improprators; County, Diocese, Archdeaconry, Population, and Church Accommodation of the Livings: compiled from the Report of the Commissioners appointed "to inquire into the Revenues and Patronage of the Established Church in England and Wales," and presented to both Houses of Parliament, in June 1835, by command of His late Majesty. To which are added, an alphabetical List of the Dignitaries and Beneficed Clergy, and the Ecclesiastical Patronage at the disposal of the Queen, Lord Chancellor, Chancellor of the Duchy of Lancaster, Archbishops, Bishops, Deans and Chapters, Prebends of Cathedral and Collegiate Churches, Colleges at the Universities of Oxford and Cambridge, &c. &c.

Printed for J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

## AN EXPOSITION OF THE PARABLES

AND OF OTHER PARTS OF THE GOSPELS.

By the Rev. EDWARD GREWELL, B.D. Fellow of Corpus Christi College, Oxford; and Author of the "Harmonia Evangelica," and of "Dissertations on the Principles and Arrangement of a Harmony of the Gospels."

Printed for J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

\* \* \* A few Copies of the Three last Parts may be had, to complete Sets, price 1l. 16s.

## KING EDWARD THE SIXTH'S PRIMER.

In royal 12mo. price 8s. boards, the 2d edition of

## THE PRIMER; a Book of Private Prayer,

needful to be used of all Christians. Which Book was authored and set forth by order of King Edward VI., to be taught, learned, read, and used of all his Subjects.

Edited by the Rev. HENRY WALTER, B.D. F.R.S. Late Fellow of St. John's College, Cambridge.

Printed for J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

In 12mo. price 2s. 6d. boards, FAMILY READINGS from the GOSPEL of ST. JOHN; adapted also to the Use of Teachers in Sunday Schools.

By the Rev. JAMES SLADE, M.A. Vicar of Bolton, and Prebendary of Chester. Printed for J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

In 8vo. price 10s. 6d. in boards, A VIEW of the EVIDENCE afforded by the LIFE and MINISTRY of ST. PETER to the TRUTH of the CHRISTIAN REVELATION.

By PHILIP STANHOPE DODD, M.A. Rector of Fenshurst, Kent; and Chaplain in Ordinary to the King. Printed for J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

In 1 vol. 12mo. price 6s. in boards, with a Memoir of the Author, and Portrait, the 13th edition of

## FEMALE SCRIPTURE CHARACTERS,

exemplifying Female Virtues, &c. &c. By Mrs. KING. Printed for J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall; and sold by Hatchard and Son, Piccadilly.

In 12mo. price 2s. 6d. in boards, MEMOIR of MRS. AGNES BULMER, Author of "Mesiah's Kingdom," and of the "Memoirs of Mrs. Mortimer," &c.

By her Sister, ANNE ROSS COLLINSON. To which is subjoined, Mrs. Bulmer's last Poem, "Man the Offspring of Divine Benevolence," composed a short time before her death. Printed for J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

## HISTORY OF ENGLAND, from the

earliest Period to the present Time; in which it is intended to consider Men and Events on Christian Principles. By a CLERGYMAN of the CHURCH OF ENGLAND.

The 75th Number is just published. Printed for J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

\* \* \* Volumes I. to V. may be had in boards, price 1l. 14s. 6d.; or in Numbers, at 6d. each.

## A GENERAL VIEW of the DOCTRINE

of REGENERATION in BAPTISM. By the Right Rev. CHRISTOPHER BETHELL, D.D. Lord Bishop of Bangor. Printed for J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

In 1 thick vol. 12mo. price 9s. 6d. in cloth boards,

## THE YOUNG CHRISTIAN'S SUNDAY

EVENING; or Conversations on Scripture History. Second Series: on the Four Gospels. By Mrs. PARRY. Author of the "Infant Christian's First Catechism." Printed for J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Lately published, The First Series: on the Old Testament. 2d edition, 8s. 6d.

Mr. Holden's Exposition of the New Testament. In 1 large vol. 12mo. price 12s. in boards, the 2d edition, revised and improved,

## THE CHRISTIAN EXPOSITOR; or,

a Practical Guide to the Study of the New Testament. Intended for the Use of general Readers.

By the Rev. GEORGE HOLDEN, M.A. Though many Expositions of the Bible of great and deserved celebrity exist in our language, a Commentary sufficiently short to be read by those who have not leisure to consult learned works, yet sufficiently comprehensive to serve as a guide to the study of the Sacred Scriptures, appears to be still wanting. To supply this deficiency is the design of the present work, in which it has been the aim and study of the author to embrace, in a condensed form, such information as will enable the general reader to ascertain the real meaning of the inspired writers.

Printed for J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Of whom may be had, by the same Author, The Christian Expositor of the Old Testament. Price 12s. 6d.

In 8vo. price 9s. 6d. in boards,

## SERMONS on VARIOUS SUBJECTS.

By the Rev. JAMES S. M. ANDERSON, M.A. Chaplain in Ordinary to the Queen, Chaplain to the Queen Dowager, and Perpetual Curate of St. George's Chapel, Brighton. London: Printed for J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall; sold by J. H. Parker, Oxford; and all the Booksellers in Brighton.

Also, by the same Author, the 2d edition of Discourses on Elijah and John the Baptist. 8vo. 10s. 6d.

In small 8vo. with fine Frontispiece and Vignette, price 6s. handsomely bound in cloth,

## SACRED PHILOSOPHY of the

SEASONS—AUTUMN. Being the concluding Volume of a Series, illustrating the Perfections of God in the Phenomena of the Year.

By the Rev. HENRY DUNCAN, D.D. Rathwell. The Volumes on Winter, Spring, and Summer, may still be had, and are sold separately, each being complete in itself. Published by William Oliphant and Son, Edinburgh; Hamilton, Adams, and Co. London; and Curry and Co. Dublin.

## NEW WORKS, UNDER THE SUPERINTENDENCE OF MR. CHARLES HEATH.

### PORTRAITS OF THE CHILDREN OF THE NOBILITY;

A SERIES OF HIGHLY FINISHED ENGRAVINGS, FROM DRAWINGS BY A. E. CHALON, Esq. R.A., AND OTHER  
EMINENT ARTISTS;

WITH ILLUSTRATIONS IN VERSE, BY DISTINGUISHED CONTRIBUTORS.

EDITED BY MRS. FAIRLIE.

First Series. Royal 4to. price 31s. 6d. handsomely bound; Proofs, on India Paper, in morocco, 3l. 3s.

DEDICATED, BY GRACIOUS PERMISSION, TO THE QUEEN.

PORTRAITS OF	DRAWN BY	WRITTEN BY
The Ladies EMILY BLANCHE CHARLOTTE, ROSE CAROLINE, MARY, and EMILY CATHARINE ANNE SOMERSET, Daughters of His Grace the DUKE of BEAUFORT .....	CHALON.	LADY EMMELINE STUART WORTLEY.
The Lady MARY HOWARD, Daughter of the EARL of CARLISLE .....	BOSTOCK.	Capt. MARRYAT, in imitation of HERRICK.
Children of the EARL of WILTON .....	CHALON.	COUNTRESS OF BLESSINGTON.
The Hon. FRANCES DIANA MANNERS SUTTON, Daughter of VISCOUNT CANTERBURY ...	BOSTOCK.	L. E. L.
Sons of His Grace the DUKE of BUCCLEUCH and QUEENSBERRY .....	CHALON.	W. B.
ELIZABETH JANE SOMERVILLE, Daughter of Sir WILLIAM SOMERVILLE .....	MACLISE.	H. L. BULWER, Esq.
The Ladies HENRIETTA LOUISA PRISCILLA, and GERALDINE HARRIET SOMERSET, } Daughters of His Grace the DUKE of BEAUFORT .....	CHALON.	JAMES SMITH, Esq.
Daughter of LORD FREDERIC FITZCLARENCE .....	CHALON.	COUNTRESS OF BLESSINGTON.
The Daughters of LORD LYNTHURST .....	MACLISE.	B. D'ISRAELI, Esq. M.P.
The Right Hon. MARY FRANCES ELIZABETH, BARONESS LE DESPENCER .....	CHALON.	Mrs. FAIRLIE.

"The conception of this publication was a brilliant idea. The highest credit is due to Messrs. Chalon, MacLise, and Bostock, for the ability with which they have preserved so much of the delightful beauty, vivacity, and grace, of the infantile and youthful character."—*Literary Gazette*, Nov. 19.

"We have this day to notice a new star in the literary world—a new book of beauties, and truly a beautiful book, entitled, 'Portraits of the Children of the Nobility.'"—*John Bull*, Nov. 30.

"The choicest volume of the season. Never did the acknowledged dignity and grace of the English aristocracy take a more triumphant form than the features and figures of the youthful group to which the pencils of MacLise, Chalon, and Bostock, have here given a long-surviving power. The taste and propriety, the perception of beauty, and the judgment in realising it, which are exhibited in this volume, entitle Mrs. Fairlie to the warmest felicitations of all who are particularly interested in it; and this number extends not merely to all the English nobility, but to every admirer of grace, beauty, and refinement—in one word, to every lover of the poetry of childhood."—*Courier*, Nov. 19.

"The engravings are beautiful, as all are that have the benefit of Mr. Charles Heath's superintendence."—*Spectator*, Nov. 30.

"This is a very elegant work, both as regards its embellishments, and the poetical illustrations which accompany them."—*Sun*.

### LEILA; OR, THE SIEGE OF GRANADA.

A ROMANCE.

By EDWARD LYTTON BULWER, Esq. Author of "The Pilgrims of the Rhine," "Rienzi," &c.

1 vol. royal 8vo. with Fifteen highly finished Historical Engravings, price 31s. 6d.; Imperial 8vo. with India Proof Plates, price 2l. 12s. 6d.

Forming a Companion to Captain Marryat's "Pirate," and the Second of a Series of Illustrated Works by the best Authors, executed under the  
superintendence of Mr. CHARLES HEATH. (*Early in 1838.*)

### BEAUTY'S COSTUME;

A SERIES OF FEMALE FIGURES, IN THE DRESSES OF ALL TIMES AND NATIONS, CONTAINING TWELVE  
ENGRAVINGS BY THE FIRST ARTISTS.

WITH ORIGINAL DESCRIPTIONS BY LEITCH RITCHIE, Esq.

ANCIENT EGYPTIAN COSTUME  
TURKISH COSTUME  
BERNESE COSTUME  
RUSSIAN COURT DRESS

CONTENTS.

A SWISS COSTUME  
PERSIAN COSTUME  
AN ANCIENT SCOTTISH COSTUME  
COSTUME OF THE COURT OF LOUIS XII.

MILANESE COSTUME  
COSTUME OF THE ENGLISH PEASANTRY  
COSTUME OF THE COURT OF CHARLES VII.  
SCOTTISH HIGHLAND COSTUME.

In 4to. price 21s. elegantly bound; or coloured in imitation of the Drawings, 2l. 2s.

On Saturday, December 16th,

### CONFESSIONS OF AN ELDERLY LADY.

Printed by JAMES MOYSE, of Brook Green, Hammersmith, in the County of Middlesex, Printer, at his Printing Office, Number 28 Castle Street, Leicester Square, in the said County; and  
published by WILLIAM ARMIGER SCRIPPS, of Number 18 South Molton Street, in the Parish of Saint George, Hanover Square, in the County aforesaid, at the LITERARY GAZETTE  
OFFICE, Number 7 Wellington Street, Waterloo Bridge, Strand, in the said County, on Saturday, November 25th, 1857.

# THE LITERARY GAZETTE; AND Journal of Belles Lettres, Arts, Sciences, &c.

No. 1089. LONDON, SATURDAY, DECEMBER 2, 1837.

PRICE 8d.  
Stamped Edition, 9d.

## REVIEW OF NEW BOOKS.

### THE ROYAL SOCIETY.

*A Letter to H. R. H. the President of the Royal Society, on the New Catalogue of the Library of that Institution now in the Press.*  
8vo. pp. 60.

AT the time we are reading this pamphlet of Mr. Panizzi, the Society whose character it impugns is dining together, and enjoying the anniversary of St. Andrew's Day. Whether the dessert here or there is most fitting, it is not our province to pronounce; but the matter, as affecting so important an institution as that at the head of British science, is of too much public interest not to demand an exposition in a journal devoted to such subjects. As Mr. Panizzi's statement is also *unpublished*, and only distributed among few hands, it becomes the more our duty to take a sufficient notice of it.

The dispute is a painful one. It is between an individual and a powerful body; and, consequently, unfavourable to the latter, as public opinion always naturally takes side with the weaker party. It is, further, between a single foreigner, complaining of injustice, and a native tribunal of great weight and influence—a disadvantage which, in like manner, enlists the feelings on behalf of the aggrieved, whether, indeed, his complaint be well or ill founded. It seems also to hinge, in some particulars, on small punctilio and angry private and personal resentments, quite as much as on substantial grounds of difference; and the whole pecuniary amount at issue appears unworthy of having been made an object of contention. In order to enable the world to form its own judgment, however, and not to speak *ex cathedra* ourselves, we shall merely glance over the pamphlet, and lay its principal heads before our readers.

Mr. Panizzi commences by referring to the president's annual address, this time last year, and says,—

"In this address, your royal highness mentions the facts that I 'was employed by the council to draw up a classed catalogue' of the Society's library, and that this classed catalogue is now composed. To these facts your royal highness adds, that it 'is undergoing such a revision from different members of the council, who have kindly undertaken the task, as is calculated to make it as correct and complete as the circumstances of the case will allow it to be.' This remark it is impossible for me, in justice to myself and to the members of the Society, who are, in general, profoundly ignorant of the proceedings of the council, to pass over without notice, nor without some animadversions upon the circumstances under which the catalogue compiled by me has been withdrawn from my own control, and placed under the 'revision' of 'different members of the council.' With what justice and courtesy I have been treated by the council in this withdrawal will, I think, appear, as will also the bibliographical qualifications of some of those persons who have so 'kindly undertaken' to render my catalogue 'correct and complete.' Your royal highness cannot be unacquainted with the facts, that I have been prevented from continuing my labours upon the catalogue by

what I consider a most unjust resolution of the council of the Royal Society; that against this resolution I have in vain remonstrated; and that I had previously endeavoured to dissuade the council from persisting in certain acts, which, in my opinion, will render the work less correct and less complete than it was my wish to make it, in justice to the character of the Society, and to my own literary reputation. I humbly conceive that, in fairness to the Society, to the council, and to myself, these facts ought to have been mentioned in your royal highness's address; and I must also take the liberty of protesting strongly against the manner in which your royal highness speaks of the revision which the catalogue is now undergoing, 'as calculated to make it as correct and complete as the circumstances of the case will allow it to be,' since it conveys the idea that I had performed my task in so incorrect a manner as to render such a revision necessary, and implies that to me are to be imputed the circumstances which will not allow the work to be as correct and as complete as it would otherwise have been."

Lamenting that the president's long indisposition should have prevented him from becoming acquainted with the demerits which the writer ascribes to members of the council and of the library or catalogue committee, Mr. P. asks, "How can it be asserted, that the library of the Royal Society is singularly rich in journals, and in works on physical and anatomical science? How can it be said that the catalogue would present the 'treasures of the library' in such a form, 'that persons engaged on works of research, or on any specific subject of scientific inquiry, might be made at once acquainted with nearly all the sources from which they could derive information?' Had your royal highness not been deceived, could you have held out the Royal Society's catalogue as an example which might influence the trustees of the British Museum 'in hastening the compilation of a similar work?' He continues, "Although it is somewhat an ungracious task to expose the faults of a catalogue confessedly so bad as was the first attempt of the committee—an attempt which, if it had been persevered in, would have rendered the Society the laughing-stock of scientific Europe—yet, in self-defence I am compelled to do so. Some of my disagreements with the council have arisen, it will be seen, from my repudiating, as judges of my work, those scientific men, some of whom either compiled or sanctioned that catalogue, and thus proved themselves unqualified for the task; I must also show that mathematics, or natural history, do not of necessity involve a knowledge of bibliography, and that solecisms in the last may be easily committed by those who are conversant with the former, and that it is no uncommon thing for a man of science to be but imperfectly acquainted even with the authors who have written on the subjects most familiar to him. Your royal highness may, perhaps, have heard of a secretary, in former times, of the Royal Society, who did not know M'Laurin, and who gravely quoted before the astonished members, 'Monsieur Laurin's Account of Newton's Discoveries.' But solecisms

more grave than this have been committed, more advisedly, as your royal highness will admit, after having heard the whole history of this unpleasant transaction."

Mr. Panizzi proceeds to demonstrate this by reference to a specimen sheet which was submitted to him as a model.

"I was (he says) astonished at the numberless errors by which it was disfigured. The more I looked into it, the worse did it appear, and I soon felt convinced that it was utterly incapable of correction. I immediately wrote a note to Dr. Roget, stating the conclusion to which I had come, and begging to decline to have any thing to do with a work which I felt satisfied would be disgraceful to the Royal Society, and to any person who should venture to meddle with it."

Mr. P. hints that this pretty strong and unceremonious opinion hurt the self-love of Dr. Roget, and made him his enemy: he was, nevertheless, engaged, on certain terms, to compile the entirely new catalogue which he recommended, instead of that whose blunders he so satirically condemns.

"That sheet (he tells us) extends from letter A to letter D of pure mathematics, with which several works therein entered have nothing whatever to do; for instance, 'Avogadro's Nouvelles Considérations sur la Théorie des Proportions déterminées dans les Combinaisons, et sur la Détermination des Masses des Molécules des Corps'; 'Bagay's Tables Astronomiques et Hydrographiques'; 'Brown's Principles of Gunnery'; 'Clifton's Tabular Observations, recommended as the plainest way of practising Physics'; 'Cloquet's Traité Élémentaire de Perspective à l'Usage des Artistes.' Since, according to the scheme adopted, there were such classes as chemistry, astronomy, mechanics, anatomy, including medicine, and optics, it is clear that, to range such works under pure mathematics was preposterous. \* \* \* I must mention that several works had been altogether omitted: for instance, but of six works of Anderson's, only three had been entered. As a compensation, however, many works are twice catalogued. Of this I shall give only one or two specimens. Between the two names Condorcet and Conti the following entries occur:—

• Christiani (F. N.) The Elements of Linear Perspective.  
8° Cantab. 1811.

— Tetragonismus sive Circuli Quadratio. 4°  
Brixlar, 1821.

— Essais d'Analyse. tom. 1. Par. 1768.

— Autre exemplaire.

— Et M. D'Alembert, sur le Système de Monde et sur le Calcul Intégral. 4° Par. 1768.

— Discours sur les Sciences Mathématiques, prononcé au Lycée le 15 Février, 1768. 8° Par. 1812.

The first two entries are to be again met with in the same words under the same name between Cresswell and Cronier, although the 'Elements of Linear Perspective' are by Cresswell, and the 'Tetragonismus' by Christiani. The other four articles are by Condorcet; the third, instead of being by him and D'Alembert jointly, it is by him alone, addressed to D'Alembert; in the last, the name of D'Alembert does not occur at all. Authors' names were not better treated than the subjects. Bonaventura, the Christian name of Cavalieri,

was taken for a family name, and a cross reference put from it to Cavalieri; of the three mathematical decades of Giovan Camillo Gloriosi, one was put under Camillo, his second Christian name, and the remainder under his family name Gloriosi. On entering a collection, the word *Collezione* was taken for a surname, and Nuova for a Christian name, and thus the entry is to be found 'Collezione (N.)'. I will not notice mere errors of the press, of which the number is prodigious; but there are entries which prove abundantly that the printer was not to be accused of them. 'Cossali's History of Algebra in Italy,' was printed, 'Nelle Real Tipografia Parmense,' and Parmense was gravely inserted as the name of the place where the book was printed. 'Da Cunha's Mathematical Principles' were translated into French by D'Abreu, after the author's death, and have this title: 'Principes mathématiques de feu J. A. Da Cunha.' Any one who has even merely heard of the 'feu Lord Mair de Londres,' may easily guess, without much knowledge of French, that *feu* here means late, viz. deceased. The compiler of this catalogue, however, did not attach such a gloomy meaning to this word; but philosophically conceived it to signify *fire*, as is evident by his precaution in writing it with a capital F, *Feu*; and by substituting the word *opuscules* for the correct one *principes*, the following entry was made:—

'Da Cunha. (J. A.) Opusculs Mathématiques de Feu, traduits littéralement du Portugais, par J. M. d'Abreu. 8vo. Bordeaux, 1811.'

The idea conveyed to a Frenchman by this title would not be very clear, but it might possibly be understood that this is an infamous book, deserving to be burnt. It is a fortunate thing for *feu* Mr. Da Cunha, that this libel on his fair name was not published in his own country (he was a Portuguese) when he was living, and when the fashion was, not only to burn books, but authors; else, so dangerous an insinuation by the Royal Society of London might have exposed him to the chance of paying dearly for their blunders and bad French.\* If errors of so ludicrous a nature occur in the first sheet, which was so often revised, one may easily conceive in what state that part of the catalogue was which was set, but not corrected.

This the writer goes on, in the same tone, to exemplify, and we select a portion.

"The three following entries are to be found close to each other, about the middle of the class designated as 'astronomy and navigation.'

'Lictus (Fort.) *Multra, sive de duplici Colore Corporum Naturalium*. 1636.

\* "Of this merely elementary book, two copies are in the collection of the Royal Society, as I find from the proofs of my catalogue, where I had entered it as follows (with a cross reference from Da Cunha):—

'Cunha (Joseph Anastase da). Principes Mathématiques, traduits du Portugais, par J. M. d'Abreu. 8vo. Bordeaux, 1811. (Two copies)'

One of these copies has been in the library for more than a century, the other was presented before it was printed—if we are to believe the stamps with which they are marked, as belonging to the Royal Society. The former is said to have been presented by the Duke of Norfolk (in 1687); the other is said to have been presented by that author who is designated as *feu* in the title. How this happened, I cannot say; probably, the translator presented the book; and, the word *feu* not being understood, he was mistaken for the author. The former copy was bought with the money received for the Arundel MSS., and like other books, so added to the collection, stamped as the Duke of Norfolk's gift. Scrupulous chronologists will be perplexed at some future period, by comparing the date of the death of his grace with that of the books which he is said to have presented: but what a few hundred years signify for astronomers, for geologists, and for such other philosophers? Of the propriety of buying a second copy of merely elementary works, I am no judge: the council, probably, suppose that they are the most in request, and that 'the limited funds' of the Society cannot be better employed than in meeting what they delicately assume to be the pressing wants of the members by whom they are elected."

Lithosphorus, sive de Lapide Bononiensis (sic). 4<sup>o</sup> 1640.

Linckius (r. n.) De Stellis Martia. fol. Lipsie, 1733.

Before entering into a particular examination of the first two entries, I beg to observe to your royal highness, that I have never seen in the library of the Royal Society the two works by Liceti here mentioned, and I strongly suspect they never were there. I can, perhaps, explain how they got into the catalogue. A kind of advertisement is to be found at the conclusion of the printed plan of classification of this very catalogue, in these words:—'The books added to the library through the money received from the British Museum, for the Arundel manuscripts, are marked with an asterisk.' The works of Liceti are so marked, and having often observed books not in the collection entered with this distinguishing mark, I was told, that although the asterisk was only said to point out the books added through the above money, it did, in fact, apply also to such as were meant to be added to the library; and I have no doubt that Liceti's two works were to be, but never had been purchased. But, although I have been able to explain in a manner, if not agreeable to the parties concerned, at all events satisfactory to any one else, how books never bought were entered as purchased with certain special funds, I am at a loss to account how the first of them, at all events, was classed among astronomical works. Perhaps *multra* was taken for a constellation, like the bear, the bull, the ram; and being a compound word (*multra*, seu *mulsetra*, quasi *mulus* in *astris*, as *Ménage* would say), the mistake was a most natural one, particularly for a good Greek scholar, who must have recollected the two asses and the stable mentioned by Theocritus.\* It would, however, be time lost to speculate further how this book got among astronomical works: suffice it to say, that it is there classed. I cannot state positively, but I would almost stake my existence that such a book never existed, and that, instead of *multra*, the word meant was *multra*, that is, instead of an ideal constellation, the real word means a *milk-pail*. The following work by Liceti, was probably the one intended:—'Fortunii Liceti Genuens in Patavina Lyceo Philosophi ordinarii *Multra*, sive de duplici colore corporum naturalium dialogus physico-medicus. 4to. Utini, 1636.' *Multra* is the name of the dialogue, in which this utensil takes a share together with Circe, who had metamorphosed a human being into that implement. The subject is physiological, and the heat (*color*), not the colour (*color*), of some bodies, forms part of the subject in discussion, which I do not find either very learned, very clear, or very intelligible. The other work by the same author has no more to do with astronomy than the aforesaid milk-pail; here is its correct title:—*Lithosphorus, sive de lapide Bononiensi lucem, in se conceptam ab ambiente claro mox in tenebris mire conservante liber Fortunii Liceti Genuens pridem in Pisano, nuper in Patavino, nunc in Bononiensi Archigymnasio Philosophi eminentis*. 4to. Utini,

\* "The class astronomy, including also inland navigation, the lines of Theocritus here alluded to must have found themselves upon the mind of the Arcadian shepherd who catalogued this book, the asses being particularly favourable to sailors:

'Εκ δ' ἄρκτου τ' ἰφάνησαν, ὅταν τ' ἀνὰ μέσσω ἀμυγνὴ φέσση, σημαίνουσα τὰ πρὸς πλῆθος ἰδιῶτα πάντα.

Idyl. xvii.

'The bears and asses with the stall between  
Forebush a voyage safe and sky serene.'

Mr. Chapman, in his translation, observes that 'the asses are two stars of the fourth magnitude in the breast of Cancer.' Aratus also alludes to them. 'If two asses are stars, why should not one mule enjoy the same honour?'

1646.' I suspected, at one time, that the error arose from *Lithosphorus* being mistaken for a star, and no attention being paid to that explanation '*sive de lapide Bononiensi*.' I am now satisfied that my suspicion was unfounded, and that the blunder is gravely, deliberately, and learnedly perpetrated; it is not to be attributed to the mere ignorance, that *lapis* means a stone, not a star, but to a very ingenious process of reasoning, by which phosphorus was metamorphosed into a heavenly body. To demonstrate this in 'as correct and complete' a manner, 'as the circumstances of the case will allow,' I beg to call your royal highness's attention to another work by Liceti, which does exist in the library of the Royal Society, and which was catalogued in the following manner, in the specimen now under consideration:

Lictus (Fort.) De Lunæ sub obscurâ luce prope conjunctiones Libri III. 4to. Utini, 1642.

In my proofs it stands thus:

Lictus (Fortunius). De Lunæ subobscurâ luce prope conjunctiones, et in eclipsibus observata. 4to. Utini, 1642.

The 50th chapter in the '*Lithosphorus*,' is entitled, *De Lunæ subobscurâ luce prope conjunctiones et in eclipsibus observata, digressio physico-mathematica*. In this work Liceti declares, 'lumen illud obscurum non esse solare nunc a terra revibratum in lunarem superficiem,' against the opinion of one Galileo, (not less known than Cavalieri out of the Royal Society's apartments) who held it 'essere effecto cagatione dal riflesso de' raggi solari nella superficie del nostro globo terrestre.' At the request of Leopold, Prince of Tuscany, Galileo wrote to him a long letter in Italian, dated Arcetri, 1st of March, 1640, the object of which was to answer Liceti's objections, as well as to shew that the opinion which he held, that the light in question originated 'ex reperiens solis luminis ab æthere lunæ contraria,' was incorrect. Liceti states in these words his opinion, at the very beginning of the work, '*De Lunæ subobscurâ luce*,' and continues, 'Quam opinione colere placuit in opere de lapide Bononiensi lucifero, qui cum Lunæ in ista passione mihi visus est habere miram analogiam.' This special treatise '*De Lunæ subobscurâ luce*,' was written on purpose to reply to Galileo, whose Italian letter is inserted at length, and analysed, paragraph by paragraph. Whoever catalogued the last of these works, happening to cast his eyes on the first page, where the words just quoted occur, thinking that *Lucifer* must mean either the devil or a star, and observing that the *Lucifer* spoken of by Liceti was one which, according to this author, had a wonderful analogy with the moon, he came to the philosophical conclusion, that it must rather be like a star than like a devil, and, therefore, scientifically classed the work '*De lapide Bononiensi lucifero*,' among other books on stars, star-fish included, as I shall presently have the honour to shew to your royal highness. To unravel the motives for human actions is always a difficult task; and your royal highness will admit, that to discover the motives by which were guided the persons who classed these books, requires more depth of learning than I can, unfortunately, lay claim to: my conjectures, therefore, may not meet with universal approbation; but, then, what other reason can be assigned for placing a book on Phosphorus or Bologna-stone, not in the collection, among the astronomical treasures in the library? The work by Linck is to be found entered in my catalogue in the following manner:

'*Lucius (Johannes Henricus). De stellis marinis; figures et auctor observationes dispositae et illustratae C. G. Fischer; accedunt E. Luidfi, de Reaumur, et D. Kade hujus argumenti opuscula. fol. Lipsie, 1793.*'

Your royal highness may have heard of the Board of Agriculture having sent for twelve copies of Miss Edgeworth's essay on 'Irish Bulls,' for the use of that Institution; and this ludicrous mistake was thought so exquisite, that no one would have fancied it could possibly be equalled. But the attempt at cataloguing drawn up by some learned astronomers, the ornament and pride of the Royal Society, proves that among the members of this famous institution there are some who could leave the whole Board of Agriculture in the shade. The work on star-fish, mistaken for a work on constellations, not only is adorned with plates, shewing that it treated of aquatic, not heavenly bodies, but on the very title-page there is an oval engraving representing, on the upper half, the heavens covered with stars, and the lower half, the sea with star-fish; with the motto, *scilicet superius ita est inferius*, which was taken literally by the acute individual who made this entry, and who very mathematically argued that the stars below must belong to the domain of astronomical science, if they be, as the author declares, like those above. On the recto of the following page, a dedication of the work occurs to Sir Hans Sloane, as president, and to the fellows of the Royal Society, which, probably, was either passed over unread by the modest fellow who catalogued the book, or served to dazzle his understanding with such passages as this, '*fulgent sidera in caelis, in orbe litterario illustris vestra societas. Sideribus inscribere stellas convenit.*' But, how could any one doubt that the work was astronomical, when the writer provocingly begins his preface, '*Caelorum spectare sidera decet juvatque Astronomos?*' It is true he continues, '*Physicorum interest stellis marinis visum intendere.*' But this was, probably, taken for a figurative speech; and with that bold decision by which great men are distinguished, this work on so inferior a subject as star-fish, dedicated to the Royal Society, was by the *élite* of that same body declared to be a treatise on much higher bodies—on constellations, and, consequently, classed among astronomical books; whilst I, thinking marine stars to be animals, did not dare to follow an example so *splendide mendax*, and classed the work among others on zoological subjects. What a difference, both with respect to the length of the title, and the classes in which it was entered! Linckius would rise from his grave, were he to see misclassified a work which, as he said, he had dedicated to the resplendent constellations forming the Royal Society of his days, just because it treated of stars! How fortunate that the learned persons who are to render my catalogue correct and complete, have it still in their power to appease his indignant shade, by re-classing the work among astronomical treatises! These few specimens will satisfy any one of the justice of my assertion, that it was impossible to correct such a work."

These illustrations are, no doubt, sufficiently ludicrous, but it seems, in the end, that the council were as much dissatisfied with Mr. Panizzi's catalogue as he was with theirs. They insisted on revising and correcting it, which he resisted. They ordered it to be executed in *Classes*; and he expends many arguments to demonstrate the absurdity of that method, and the superiority of his own views in favour of an alphabetic catalogue, with an index of matters. Other points came into dispute; and, at last, after an immense load of correspondence,

crimination, and recrimination, the whole affair exploded; Mr. Panizzi was, in effect, dismissed with a payment of 477*l.*, whilst he asserts that the value of his labour amounts to 730*l.* Into all these particulars, occupying, as they do, some thirty closely printed pages, it is impossible for us to enter. Of the corrections made on his production, Mr. P. says:—

"The very classes which had passed one ordeal, when submitted to another, were mere altered; and, as I had foreseen, the greater was the number of the alterations and of the persons making them in the several classes, the greater were the discrepancies and inconsistencies. One found fault with the length of the titles; another with their shortness: one did not like the arrangements of '*Transactions*'; others did not object to it; and the same parties would have them arranged in one way in one class, and another in another; in one class, I was desired to make alterations, which, in the identical case in other classes, were not required; some disapproved of meteorology being united with chemistry; and others would have no physiology and medicine in the same class with anatomy, which was the same as to wish me to reclass the whole library, after having been compelled to adopt a bad classification; at last, the very type itself, the use of capitals, the use of italics, punctuation,—and every thing, in fact, which had been previously discussed and arranged,—were now found fault with, and all laid to my charge; and, of course, it was expected to be altered. I then saw that the resolutions were even worse practically than they seemed to be theoretically, and I determined to shew the impossibility of complying with them, as well as the injustice of expecting me to do so."

The dispute accordingly grew fiercer and more fierce; and, at length, Mr. Panizzi appears to have become so angry with the council, and so very suspicious of their intentions towards him, that he would put the most dubious construction upon the words of their resolutions, when communicated to him; and, in one instance, we think too fastidiously, refused to accept rather plain terms in the sense of their common acceptance. We allude to a Resolution of July 7th, 1836, where the council "regret that Mr. Panizzi should find any difficulty in complying with the resolutions of the catalogue committee of the 26th of April last; but, in order to meet Mr. Panizzi's wishes, the council consent that he should consider the remarks of the committee only as suggestions for his guidance."

Upon this conciliatory resolution, a friend advises him to put an offensive construction; and away again go hammer and tongs, to shew that it was only meant to be a ruse and take-in. Under these impressions, offers are made of reference, of which the council take no notice; and, finally, they refuse to hold any further correspondence with their inexorable and indefatigable accuser. He would not return the *révises* they demanded, and he charges them with unhandsoomely using a key, deposited with their under secretary, under a pledge of safe custody; thus depriving him of the proof necessary to support his demand for remuneration. Altogether, it is a strange, and not very creditable business, of which we take leave in a few last words of the writer.

"The situation in which I am now placed is such as to preclude me from any remedy. The council, knowing the precise number of titles which I have catalogued, know to a fraction how much they owe me; and, as they do not pay the balance, there can be no doubt they do not mean to pay it, unless they be compelled to

it. Now, they are well aware that I have not the means of compulsion, inasmuch as I cannot prove how many thousand titles they took from my drawers; I am therefore stopped in *limine*, and cannot even make a claim upon them. Possibly, there is some legal means of obtaining redress; but in a country like this, justice is not a luxury for a poor man to indulge in; and the council, having at their disposal the funds of the Royal Society, can amuse themselves, without personal trouble or loss, with a law-suit which I have not the means of sustaining. As for public opinion, I am not so silly as to think that any one will care a rush about my loss, and the injustice to which I must submit. Moreover, a powerful body like the council, who do not scruple at trifles, will find it very easy to misrepresent the case, and to raise an outcry against an alien whose wrongs may be made a subject of sport and ridicule. All this I know: the council know it too. Had I been an Englishman, well connected, with good interest, assisted by powerful friends disposed to see justice done to me, I should never have had to submit to the treatment which the council have nobly dared to use towards me. At present, were I to stoop to be patronised by great men, and through them to crave as a boon what I claim as my right, I might receive, through a job, what I do not get through justice. But, although the council may glory in their achievement in retaining what they owe to me, they shall never have the power of exulting in my having condescended to beg of them to act honestly. It is no small pride for me, that the council of the Royal Society do not disdain to appropriate my property to the increase "of their limited funds," by means which I have no doubt are justified, in their opinion, by the end which they have in view—the advancement of natural—if not moral—science. \* \* \* The public will perceive that a contract was entered into between the council of the Royal Society and myself for the performance of a literary work: that the council broke the terms of that contract: that they refused to state by what right they did so: that they would never answer my proposals of referring to arbitration any point in which they thought I did not act in accordance with our agreement: that, after the rudest and most uncommercial proceeding, they stooped to having clandestine access to private drawers containing the proofs of what they owe to me, and have now the meanness not to pay their debt, which by their dishonest proceedings they are aware it is out of my power legally to claim."

We have but one or two observations to add:—To mention that there is some indifferent English in this appeal, though extraordinary for a foreigner; and to express our surprise, that all the proceedings of the council seem to be repeated out of its private room, as immediately and publicly as if they sat with reporters to report them.

*Mary Raymond, and other Tales.* By the Author of "*Mothers and Daughters.*" 3 vols. London, 1838. Colburn.

THE first story in this collection is singularly touching and beautiful. It paints a wretchedness "taking many shapes and wearing many names;" but still wretchedness the hardest to bear, that which is part of ordinary existence—the existence of dependence. What a picture is the following passage, where Mary Raymond contrasts the preparations for her cousin's marriage with those for her own!

"But there was something in the stir and

bustle of the house, and more particularly in the maternal and paternal anxieties of Sir Charles and his wife, which grated painfully on the feelings of Mary. It was now just a twelvemonth since these people had conducted her to the altar; just a twelvemonth since her bandboxes of wedding finery had been hurried into the house. And who had shed tears for her? Who had experienced a moment's misgiving as to the temper or principles of the man to whom her vows of eternal love and submission were to be dedicated? Who had cared to inquire into the antecedents of his family—their temper—their temperament? Alas! Merstham's official eminence had been accepted as the voucher of his respectability—his house in Grosvenor Place as the certificate of his worthiness. A man, with an income of four thousand a year, proposing to a portionless niece, could, in fact, be neither mad, nor bad, nor even indifferent. Mary recollected how Sir Charles, without actually forcing him on her acceptance, had pointed out, in the sternest and least ornamental prose, that her situation in life was a very precarious one; that in case of the decease of Lady Raymond and himself, she would be destitute of a home; that her net income amounted to eighty-four pounds per annum; and, if he did not add that it was her duty to herself and the family to accept so respectable a protector, he implied it as plainly as ever yet injunction was implied by uncle. She recollected that the authoritative Lady Raymond had said to her, a few days previously to her marriage, 'I hope and trust, Mary, I shall see no tears on Thursday. It would be a very bad compliment to Mr. Merstham, and a poor return for all the kindness your uncle has shewn you, if you seemed to form with reluctance a connexion we judge so suitable, and so well calculated to secure your happiness.' And thus, poor girl, even the luxury of tears was denied her—to her, who had so little besides; while Juliana, rich in the devoted affection of the lover of her choice, surrounded by troops of friends, and sinking under the prosperities of life, might have wept fountains unreprieved!

But the whole story is so exquisitely wrought out, that we are unwilling to destroy the effect by piecemeal quotation. We shall only commend it to our readers as among the very best of Mrs. Gore's productions. Its companions are as various in merit as the printed form they assume—the type of the second and third volumes being different from that of the first. They are too French—from which the hints of many of them are taken—and rather wiredrawn, with one startling situation. The following scene is a fair specimen. The invalid, who has been such for years, is on her death-bed, surrounded by her family and her husband.

"By the light of that ill-omened lamp I looked upon the pale, pale face of madame, scarcely distinguishable from the white pillow on which it rested, and noticed the slender hands devoutly crossed upon the breast of the sufferer, as though it had been too great an indulgence for a dying sinner to suffer them to be clasped in the endearing grasp of the loved ones who knelt around her couch. Mademoiselle Sophie's head was buried in the coverlid; Claire and Antoinette were entwined in each other's arms; but on the face of the poor father was utter despair. 'Take courage!' said I, after having bent over her, and examined her countenance. 'Heaven is giving her renewed strength. Her breath is free—her pulse beats stronger. Speak, dear lady!

Set their hearts at ease! You are better; are you not?' 'Almost well!' replied Madame de St. Sauveur, in a voice whose hollowness startled her hearers with horror. 'Raise me up, Victorine, and give me my last measure of earthly sustenance, that my soul may bless you before I die.' Although nearly motionless, air, with awe, I obeyed her injunctions. I raised her in my arms—I lifted to her lips a cordial potion; and, as she stooped her head to drink, I heard a murmur between her parched lips. And, trembling as I listened, I wiped away the heavy dew from her dying brow, and supported her emaciated frame in my arms, when, on a sudden, she called wildly on the marquis to draw near, and cried aloud, in a hoarse voice, that she must not die till all should be accomplished. 'I cannot go hence,' said she, 'till justice has been done. A secret lies heavy on my soul—to weigh me down to destruction. My husband will curse me in my last moments—my children will loathe me in the grave—yet, behold, my task must be fulfilled.' 'No, no, no!' ejaculated Monsieur de St. Sauveur, breathless with consternation, and willing to impute the incoherent words of his wife to delirious excitement. 'You are destroying yourself by this violence. Tranquillise your nerves by a night's rest. The curé of Icart has been sent for, and, in the morning, the spiritual consolations of the church will restore you to a happier frame of mind.' 'He shall seek me in the morning, and he shall not find me,' answered the marchioness, in a wild but solemn voice. 'But tell him that if I died unblessed by the sacraments of grace, it was that I held myself unworthy to approach them in my struggle with death; although, if earthly penance may avail in the sight of the Most High, for years and years I have neither stirred or rested, save with the remembrance of my sin before my eyes.' 'If not in mercy to yourself,—in pity to me,—desist!' cried the poor marquis, covering his face with his hands. 'Nay!' replied the dying penitent, in a tone hoarse with the near approach of death; 'I have deferred my confessions too long already. Husband, my eyes are dim, and I behold your face no longer. Children, my hands are cold as the clod of the valley, and your embraces must be mine no more. Grant me only a word of pity—a word of pardon!' 'Mighty Heaven!' cried Madame Sophie, almost distracted, 'restore her to herself! She raves!' 'Oh! no, no,—I am not raving,' faltered the marchioness. 'With the full and perfect possession of my faculties, I avow that one of the daughters now weeping beside me is not the offspring of my husband!' A thunderbolt falling into the chamber of death could not have produced a more startling sensation. The horror of the announcement burst at once upon the minds of the girls. One of them, then, was an alien. One of them was about to be cast forth. One of them upon the verge of orphanhood. Involuntarily the three sisters precipitated themselves at the feet of him whom each still trusted might be her father. The words resounded in their ears,—'one of them is not the offspring of my husband!' 'Oh, do not say it is I! Mother, mother! say not, say not, that it is I!' cried Sophie, writhing with agony. 'We have been so happy together!' ejaculated Claire, embracing both her sisters; 'and must we part at last?'—while Antoinette, pale as her dying mother, was unable to utter a syllable; but kept convulsively kissing the hand of the marquis, as if a sentence of illegitimacy would prove to her young heart a sentence of death. 'And since I must

die with the brand of guilt upon my brow,' added the dying woman, 'let me at least atone the injury I have inflicted by a final act of justice.' 'Not another word!' cried Monsieur de St. Sauveur, advancing solemnly towards the bed-side; 'such atonement were a deeper injury. I have loved—I love these three children as my own. I cannot spare the one of which you would deprive me. I have heard too much; I wish to hear no more. You have robbed me of my tenderness towards the wife of my youth; bereave me not of one of my beloved girls.' The sisters sprang at once into his arms. They bathed him with their tears; they clung to the heart—the generous heart of that best of men; and lo! a flush of indescribable joy lighted up the countenance of the guilty mother, whom for a moment they had forgotten. 'I die content!' she faltered, laying her poor head upon my shoulders. 'The innocent one will not be driven forth to perish. Blessings on him—blessings on them—I die content.' Loudly, at that moment, did I call upon the marquis, to extend his hand to her in token of forgiveness; for I saw that her spirit was passing away. And, after a moment's pause, he did so; but the concession came too late. She was gone! she was at rest! Yet I would have given much that her dying ears had caught the parting adjuration of her husband:—'Thy sins be forgiven thee above, as I have truly and freely forgiven them!—*Vade in pace.*'

We must, though we have seen it before, particularise "Lady Evelyn Saville's Three Trials;" it belongs to a higher moral order than the melodramatic Gallicism.

*Kay's Works, with Biographical Sketches. Parts II. and III.* Edinburgh, Paton; London, Smith, Elder, and Co.

FROM the first Part of this amusing publication we quoted some pleasant anecdotes. We proceed to transcribe a few from the Parts before us.

*Dr. Webster.*—"Dr. Webster was married to Miss Mary Erskine, a young lady of fortune, daughter of Colonel John Erskine (brother of Sir Charles Erskine, of Alva, Bart.), by Euphemia, daughter of William Cochrane, Esq. of Ochiltree. She was nearly related to the family of Dundonald, and was courted by some of the first peers of the realm. This connexion originated in a somewhat curious manner. During his residence at Culross, Mr. Webster was employed by a friend to procure for him the good graces of Miss Erskine, who then resided at Valleyfield, in the neighbourhood. This duty he faithfully performed, and urged his friend's suit with all the eloquence he was master of, but to no purpose. At length, wearied with his importunities in the cause of another, and at the same time prepossessed by his own figure and accomplishments, both of which were eminently attractive, Miss Erskine plumply remarked to him, 'You would come better speed, Sandy, if you would speak for yourself;' and on this hint Mr. Webster did indeed speak, and to such purpose, that they were shortly afterwards married.

"No less remarkable for his wit and convivial powers than for his more solid qualities, Dr. Webster was as great a favourite at the social board as in the pulpit. He was particularly fond of claret. A friend, on whom he called one day, and who was aware of his predilection for this liquor, said he would give him a treat, adding that he had a bottle of claret which was upwards of forty years old. The bottle was accordingly produced, but proved to be only a pint bottle. 'Dear me,' said the

disappointed doctor, taking it up in his hand, 'but it's unco little o' its age!'"

*Bailie Lothian.*—"Bailie Lothian, though a very excellent person, was not remarkable for his literary acquisitions. The late Mr. Smellie, printer, invited him to attend the funeral of Mr. Greenlaw, teacher and preacher of the Gospel, Edinburgh: the funeral letters were, at the dying request of that gentleman, written in Latin. The receipt of this circular puzzled the worthy magistrate exceedingly—for hours he turned it over and over again, without being able to make any thing of it. On a sudden a new light came upon him. He remembered that Mr. Smellie had published some animadversions upon the conduct of the magistrates, and he sagely concluded this to be a fresh libel, not only upon the whole civic authorities, but upon himself in particular. Impressed with this idea, he determined to lay the matter before his brethren; and, accordingly, at the first meeting of council, he threw the mysterious paper, with great indignation, on the table, observing, that this was another '*skit*' by that fellow Smellie on the magistracy! His astonishment may be well conceived, when those present, so far from sympathising with him, received his extraordinary communication with reiterated bursts of laughter."

*Roger Hog, Esq.*—"Being very parsimonious, he amassed a large fortune. Beside his landed property, he died possessed of personal estate to a vast amount, the succession to which was contested, and gave rise to the celebrated case of *Lashley* against *Hog*. It is said that Mr. Hog, amongst other economical habits, used to dispose of his poultry, and, to superintend the trade himself, he usually brought them to market in his carriage. His son and heir going out one day to Newliston, to visit his father, met him on his way to town. The servants knowing their master was short-sighted, drove the carriage close up, that they might converse together. The son, in popping his head in at the carriage-window, was, to his infinite astonishment, immediately seized by the nose by an enraged turkey-cock on his way to the market."

*Francis Grose, Esq. F.A.S.*—"He was exceedingly corpulent, and used to rally himself with the greatest good humour on the singular rotundity of his figure. The following epigram, written in a moment of festivity by the celebrated Robert Burns, the Ayrshire bard, was so much relished by Grose, that he made it serve as an excuse for prolonging the convivial occasion that gave it birth to a very late hour: The Devil got notice that Grose was a-dying, So whip! at the summons, old Satan came flying; But when he approach'd where poor Francis lay moaning, And saw each bed-post with its burden a-groaning, Astonished, confounded, cries Satan, '—', I'd want him, ere take such a — load!"

*Samuel M'Donald, or Big Sam.*—"On one occasion, having been challenged by two soldiers of his own regiment, on the understanding that he was to fight both at once, Samuel agreed, but said, as he had no quarrel with them he should wish to shake hands with them before they began. One of the combatants instantly held out his hand. Samuel took hold of it; but, instead of giving it the friendly shake expected, he used it as a lever to raise its owner from the ground, when he swung him round as he would a cat by the tail, and threw him to a great distance. The other combatant, not admiring this preliminary process, took to his heels."

*Dr. Black and Dr. Hutton.*—"Several highly respectable literary gentlemen proposed to hold a convivial meeting once a-week, and

deputed two of their number, Doctors Black and Hutton, to look out for a suitable house of entertainment to meet in. The two, accordingly, sallied out for this purpose; and, seeing on the South Bridge a sign with the words, 'Stewart, vintner, down-stairs,' they immediately went into the house and demanded a sight of their best room, which was accordingly shewn to them, and which pleased them much. Without further inquiry, the meetings were fixed by them to be held in this house, and the club assembled there during the greater part of the winter; till, one evening, Dr. Hutton, being rather late, was surprised, when going in, to see a whole bevy of well-dressed but somewhat brazen-faced young ladies brush past him, and take refuge in an adjoining apartment. He then, for the first time, began to think that all was not right, and communicated his suspicions to the rest of the company. Next morning the notable discovery was made, that our amiable philosophers had introduced their friends to one of the most noted houses of bad fame in the city! These attached friends agreed in their opposition to the usual vulgar prejudices, and frequently discoursed together upon the absurdity of many generally received opinions, especially in regard to diet. On one occasion they had a disquisition upon the inconsistency of abstaining from feeding on the testaceous creatures of the land, while those of the sea were considered as delicacies. Snails, for instance—why not use them as articles of food? They were well known to be nutritious and wholesome—even sanative in some cases. The epicures, in olden times, esteemed as a most delicious treat the snails fed in the marble-quarries of Lucca. The Italians still hold them in esteem. The two philosophers, perfectly satisfied that their countrymen were acting most absurdly in not making snails an ordinary article of food, resolved themselves to set an example; and, accordingly, having procured a number, caused them to be stewed for dinner. No guests were invited to the banquet. The snails were in due season served up; but, alas! great is the difference between theory and practice: so far from exciting the appetite, the smoking dish acted in a diametrically opposite manner, and neither party felt much inclination to partake of its contents. Nevertheless, if they looked on the snails with disgust, they retained their awe for each other; so that each, conceiving the symptoms of internal revolt peculiar to himself, began with infinite exertion to swallow, in very small quantities, the mess which he internally loathed. Dr. Black at length broke the ice, but in a delicate manner, as if to sound the opinion of his messmate. 'Doctor,' he said, in his precise and quiet manner,—'doctor, do you not think that they taste a little—a very little queer?' D—queer! d—queer, indeed!—tak them awa', tak them awa'!" vociferated Dr. Hutton, starting up from table, and giving full vent to his feelings of abhorrence."

*Electricity; its Nature, Operation, and Importance in the Phenomena of the Universe.* By William Leithhead, Secretary to the London Electrical Society. 8vo. pp. 399. London, 1837. Longman and Co.

THERE is not a truism in the literature of physical science which will admit of less controversy, than that the science of electricity is not yet in that condition in which its importance in the phenomena of the universe can be much more than guessed at. Hence the absence of any systematic works upon the subject. The elements of the science are well treated of in most modern chemical works; and Mrs. Somerville's admirable little book

contains the best view of the progress of electro-magnetism and electro-galvanism: but there still remained an excellent opening for a work like the one before us, but which, we regret to say, by no means possesses the qualifications most desirable in such a treatise. If we might judge of a man's mind by his work, we should say that Mr. Leithhead, possessed of much caution, has still a decided preference for the unreal over the real; and hence the long and, perhaps, tedious experimental inductions of modern investigators, are neglected for theories of cholera, fever, thunder-storms, and the hap-hazard but brilliant discoveries of Mr. Crosse. There is not a greater desideratum just now, than a condensed and intelligible view of the discoveries of Mr. Faraday, diffused as they are through the ponderous tomes of the Royal Society, or such brief reports as the *Literary Gazette* could give;\* and the researches of Becquerel, unnoticed here, on electro-crystallisation, preceded those of Mr. Crosse. The extracts taken from various physiological writers, to shew the opinions held of the connexion existing between nervous and electric action, would appear, isolated as they now stand, to be so many attempts made by those eminent men to approach the perfection of an electric theory, such as is propounded for us by the author in his circulatory nervous conductors. But they are, in fact, only pegs upon which to hang the said theory. Every physiologist, and every man of science, is now deeply imbued with the idea of a connexion between modified forms of electric action, and many vital phenomena—intimate relations of mind and matter, which will render more remote than ever the supposed boundaries of philosophy, and which faintly shadow forth the outlines of a science in which the *elements of investigation* have not yet been discovered. Sensible of this condition of an ever-progressive knowledge, Faraday, Wilson Philip, Magendie, Bostock, Mayo, and a host of others, have, not as leading arguments, but as urged upon them by some momentary subject of discussion, intimated briefly and darkly the existence of a *nervo-electric power*. It is saying much for Mr. Leithhead, that, in handling this subject, he has done so without entering too widely into the regions of hypothesis; and the greatest novelty offered in the inquiry is the connexion of electricity with certain gaseous conditions, and the almost hypothetical conjecture regarding the nature of our atmosphere. We almost wish the work may go through another edition, that its few faults may be corrected. The constant habit of running away from the subject, when a new train of thought suggests itself, as in article *Clouds* (p. 334), betrays habits of writing without discipline; and there are rhapsodies, as at p. 298, upon a dew-drop, exhibiting a desire to be eloquent, which is pardonable, but not pleasing. We may remind the author, that Dr. Henry's and Dr. Turner's chemical works proceeded from small beginnings; and it only remains to keep to this really inductive part of the science, to render the present book the manual of the day.

#### *The Book of Beauty.*

[Second Notice.]

IT is not often that we afford a second notice to an Annual, but the circumstance mentioned

\* These reports, we are proud to say, have been authentic and correct, so far as they could go; but, how insufficient they must, of necessity, be, in conveying a complete idea of the great scientific achievements of Mr. Faraday, we are reluctantly compelled to admit.—*Ed. L. G.*

in our list, viz. that our copy of the *Book of Beauty* had miscarried till too late for us to give it a fair examination, induces us to recur to its lustrous external and satisfactory internal qualities, both as regards miscellaneous literature and specimens of art. The *clothing* is, we think, the most handsome we ever saw in this style of "silken sheen;" and the engravings, thirteen in number, are very charming. Among these, we did mention Mrs. Wombwell's as a lovely portrait; and "Lady Chesterfield," after E. Landseer, by H. Robinson, deserves almost similar praise. A bust of the Queen, as a vignette on the title-page, is a graceful production. "Mrs. H. Bathurst and Child," and "Aisha," are quite in Chalon's way; and yet "Miss Leithbridge," by Hayter, is much in the same manner. "Dolorida," by K. Meadows, has somewhat more depth or colour. The "Butterfly," by Hayter, two beautiful children, is in a like free sketchy character, and would, in our opinion, have been improved had their childish eyes and attention been directed to the fragile object which gives its name to the print. "Marguerite," by Bostock, competes, without disadvantage, with all the delightful artists we have specified. "Mrs. Fairlie" is an exquisite portrait, by J. Wood; and "Katerina," by the same, an exquisite companion to it. "Rhoda," by J. J. Jenkins, is not unworthy of this beautiful assemblage; and "Mrs. Lane Fox" completes the group, as it should be, though, perhaps, a little clearness might be desired in the execution.

In again making a choice from the literary contents, we trust that going to the same well of poetry will find its excuse, first, in the novelty of the *débutants*, and, secondly, in the merits of her performance, of which we are not aware how much may be due to the French original, but feel that this version is full of bold and forcible imagery and effect.

"Dolorida. From the French of the Count A. De Vigny.  
By Mrs. Torre Holmes.

Yo amo mas a tu amor que a tu vida.  
J'aime mieux ton amour que ta vie. *Espagnol.*

Has passion kindled yon mysterious light;  
To guide a lover through the gloom of night;  
Yon shaded lamp, that at its silent hour,  
Through gauze and crystal, sheds a softer power?  
As the fresh breezes through the foliage glide,  
Behold! the Moorish window opens wide;  
The fair moon rises; and her silver ray  
Looks calm and holy, like the dawn of day;  
While earth's fierce fires contrast with those above,  
As human passion vies with heavenly love.  
Now like a stream of milk upon the ground  
The moon-beams pour, and whiten all around;  
Steal through the chamber, and reveal to view  
The velvet cushions, and their azure hue,  
The silken ottoman of gorgeous dyes,  
Where carelessly the unclosed volume lies;  
The moving pendulum, to mark the hours,  
Vases of gold, rich urns of blooming flowers;  
The pure Madonna's image, and—most fair—  
A couch, with lovely form reclining there.  
Oh! never in Madrid did noble knight  
See so much beauty to such grace unite!  
Never for brighter charms, when day decay'd,  
Awoke a lover's melting serenade;  
Never before the altar sweeter eyes  
Turned from their rosy to meet the skies:  
Or in the vast arena, where the dames  
Of Spain assembled, view those dang'rous games,  
In which the matadores' triumphant skill  
By woman's warm applause is greeted still;  
Amid the snowy hands in movement there,  
None 'neath their black mantilla shone more fair.

But, oh, young Spaniards! in whose bosoms burn  
An ardent flame, which meets with no return;  
O'er clouds of slaves while her disdainful eye,  
Careless of conquest, passes coldly by;  
If, when in silks and pearls that form was bright,  
Which of you would not perish with delight  
To look upon its loveliness to-night?  
And the avenging dagger boldly meet,  
To gaze upon those white uncover'd feet,  
That ivory throat, that bosom, smooth and fair,  
Those long black tresses of luxuriant hair,  
Which on her glossy shoulders fall around,  
Then, like the willow's branches, sweep the ground?

A simple robe, of texture soft and light,  
O'er Dolorida throws its veil of white;  
Envelop'd in its folds, her form divine  
Seems like a statue for Love's holiest shrine:  
Her polished arms support her languid head;  
Yet still she shudders at; and hours have fled,  
Since towards the dial tower'd her weary eye,  
Has marked its tedious hand creep slowly by.  
But who is he such anguish does not touch?  
He loves not, then! he whom she loves so much.  
Each day, with careless haste, she feels him press  
Upon her eager lip a cold career;  
While in her heart a love that cannot die,  
Grows with disdain, and feeds on agony.

Perhaps, young wife, had thy sweet charms possessed  
The true devotion of thy husband's breast,  
Some wandering fancies might, without control,  
Have reign'd within that weak, though ardent soul:  
For woman's love is like an infant's play;  
The fairest toys obtained, he casts away,  
And tramples with disdain on flowers most bright,  
To chase the insect in its rapid flight.

Three hours since midnight! Oh! how sad and drear  
The lapse of time strikes on the mourner's ear!  
Marking, when absence is the source of grief,  
The tedious hours that fall to bring relief.  
The lamp grows paler, its expiring light  
Now fades to dimness, now burns fiercely bright;  
Like some poor dying wretch, whose looks are cast  
Fondly to earth—it struggles to the last.  
To Dolorida's eyes, oppress'd with gloom,  
A darker horror glides o'er her countenance;  
The cold has seized her; but when sorrow lies  
Deep in the soul, it knows not tears nor sighs;  
Tranquil she seems, but wounds in anguish vain  
With jealous tooth the hand that feels no pain.

How long the silence lasts! but steps are near,  
Her husband's steps—he enters—he is here.  
She trembles not his aspect to behold,  
Where some dark tragedy at once is told;  
She views unmov'd his pale and altered face,  
Where death's cold hand hath set a fearful trace—  
She sees him beautiful, in manhood's bloom—  
Approach her couch, as though it were his tomb.

His mantle's folds exhaust his feeble strength,  
His sword weighs heavily—he falls at length;  
But, resting on his knees, in accents weak,  
With faint and trembling lips, essays to speak.

'I come to bid farewell, ere I expire,  
Dolorida, for I die! an unknown fire  
Its burning current pours through all my veins,  
Till at my tortured heart its anguish reigns.  
My feet are cold, dark mists obscure my sight;  
My strength thrice failed, returning here to-night.  
But I would see thee, when the fever came,  
And fierce convulsions shook my shudd'ring frame;  
I said, I die; but in my latest hour,  
Still shall my parting soul retain the power  
To tell her, she in absence yet was dear—  
Dearest of all. Dying, I struggled here;  
And at thy feet my pangs are half forgot.'

'Why come to die? In life you sought me not.'

'Hast thou no mercy? Canst thou harshly steal  
Thy bosom to the deep remorse I feel?  
Come, touch upon my brow the death-damp cold,  
The glassy dimness of my eyes behold:  
Give, give thine hand—one word! Oh, let me hear  
One word of kindness in my dying ear!  
Does not my youth some gentle feeling move  
Of pity, for, alas! I ask no love.  
Let my forgiven spirit part in peace,  
Feeling thy anger with my life will cease;  
Shew some indulgence in this awful hour.'

'Death is but death. Revenge should have more power.'

'O God! so young! and such a heart of stone!  
Alas! what suffering must that heart have known,  
To change it thus! but I myself upbraid,  
To see the suffering wretch that grief hath made:  
In thy harsh language all my guilt is shewn;  
Thy very cruelty is mine alone.  
But come, draw nearer, let mine accents steal  
Into thy wounded soul with power to heal;  
I swear—and I am dying—every word  
Before the Saviour's Image may be heard;  
My arms are weak, or I would raise them there,  
Touching the sacred crucifix, to swear  
That ever o'er my heart, in passion's hour,  
Thy cherished form retained its hallow'd power.  
I saw thee, still, between my fault and me;  
My very faithlessness was full of thee:  
Thy image ever to my mind appeared  
Loveller in tears, and by my guilt endear'd;  
Regul'd by pleasures that are false and brief,  
I own my frailty—but behold my grief—  
I have but twenty summers—and I die.'

'Did she, my rival, view thine agony?'

'Oh, what a cruel joy thy speech reveals!  
Alas! be happy in the pain she feels.  
When first this horrid anguish rack'd my frame,  
I saw her weep, and shudder at thy name;  
Thee, thee I call'd for in my vain despair—  
My only terror was to perish there,  
Away from thee: to die without the power  
To claim thy pardon in my parting hour.

Wilt thou not grant it to my deep distress?  
One word, one sign, one look of tenderness?  
Oh, speak before I die! But what contains  
That cup, thy eager lip so fiercely drains  
With such strange haste?

'The poison in thy breast,  
I gave thee yesterday . . . I drink the rest.'

Of the prose, Barry Cornwall's tale, told in his most simple and touching manner, is best suited to our page; though we should remark on the pleasant and varied interest which attaches to the other writers, such as Lord W. Lennox ("Legend of Hainaker"), who is following up his first steps, in publishing with great spirit; Mrs. Norton, even on the old subject of a "Monk of La Trappe;" Mr. Bernal, in his "Rhoda Tracy;" and the Author of "Vivian Grey;" W. S. Lander; "The Concert," by Miss Worthington, and other contributors.

"We live in a world of busy passions. Love and hate, sorrow and joy, in a thousand shapes, are for ever near us. Death is at our threshold. Life springs up almost at our feet. Our neighbours are 'Exultations, Agonies!' And yet we seem to live on, ignorant of all. Could we but unroof (Asmodeus-like) the houses which, day after day, present towards us so insensible an aspect, what marvels might we not disclose! What fruitful thoughts, what radiant visions, would throng into our brain! The mystery of human conduct would lie unveiled. We should see and know all men truly. We should see the miser, the spendthrift, the scholar, the tolling artisan, the happy bride, and the girl deserted (like the people in the palace of Truth), all contributing their share to the unknown romance which Time is for ever weaving round us. As it is, each of them spins out his little thread, and dies, almost unknown, and soon forgotten; unless some curious accident should arise, to extend his influence into another region, or to hold his 'fame' in suspension, twenty years after his coffin has been lowered into the dust. It was some such chance as I have just adverted to, that threw into our knowledge certain facts, regarding a neighbouring family, which else had probably slipped very quietly into oblivion. You will observe, that what I am now about to relate is, almost literally, a fact. Some years ago, we lived, as you know, in — Square. The room in which we usually dwelt was at the back of the house. It was spacious, and not without some pretensions to the graceful; the marble chimney-piece being distinguished by a painting by Cipriani, whilst on the ceiling were scattered some of the conventional elegances of Angelica Kauffman. From the windows, which occupied the northern extremity of the room, we looked (to the left of a large oriental plane) upon the back of a crescent of houses, — the points of the arc receding from us. [I mention these things, merely to recall to your mind our precise position.] In the centre of this crescent, was a house which had for a long time been untenanted. Whilst its neighbour dwellings were all busy with life and motion, this only was, for some reason, deserted. We were beginning to speculate on the causes of this accident, and to pity the unhappy landlord, whose pockets were lamenting the lack of rent, when suddenly — it was on an April morning — we perceived, for the first time, signs of change. The windows of the deserted mansion were opened, and workmen were seen bustling about its different rooms. There was an air of preparation, evidently, which announced an incoming tenant. 'Well,' said —, 'at last that unhappy man has discovered some one bold enough to take his haunted

house; or, perhaps, after all, he is merely endeavouring to decoy the unwary passenger. We shall see.' A few weeks determined the question: for, after the house had been duly cleansed and beautified, and the odour of the paint suffered to fade away, various articles of furniture were brought into the rooms. These were of moderate price, and explained to us that the new tenant was a person of respectable station, but not rich. We began to feel a wish to know 'what manner of man' he was. Our interest in the once empty house had received a new impulse; and we looked out, day after day, for the stranger's arrival. At last, a young man, of lively and agreeable presence, was one morning seen giving directions to a female servant, about the disposition of the furniture. This was evidently the master of the mansion. He stayed for half an hour, then departed; and he repeated his short visit daily. He was probably a clerk in some public office, — a merchant or professional man, — whose time was required elsewhere. But, why did he not reside there? That was a problem that we strove to solve in vain. In the end, he went away altogether.

'Each morn we missed him in th' accustomed room' —

And now no one, except the solitary maid, was seen. Throwing open the windows at morning, to let in the vernal May; closing them at night; rubbing, with a delicate hand, the new furniture; gazing at the unknown neighbourhood; or sitting listlessly in the afternoon, 'imparadised' in rustic dreams, she appeared to be the sole spirit of the spot. It was not the 'genius loci' which we had reckoned upon. Our imaginations were not satisfied; and we looked forward confidently to another comer. We were not disappointed. After the lapse of a fortnight from the young man's departure, our inquisitive eyes discovered him again. He was sitting at breakfast, with a lady by his side. Pretty, young, neat, and attired from head to foot in white, she was evidently a bride. We rushed at once upon this conjecture; and certain tender manifestations, on the husband's leave-taking, confirmed us in our opinion. He went away; and she, left to herself, explored, as far as we could observe, all the rooms of the house. Every thing was surveyed with a patient admiration; every drawer opened; the little bookcase contemplated, and its slender rows of books all, one by one, examined. Finally, the maid was called up, some inquiries made, and the survey recommenced. The lady had now some one to encourage her open expressions of delight. We could almost fancy that we heard her words — 'How beautiful this is! What a comfortable sofa! What a charming screen! How kind, how good, how considerate of —!' It was altogether a pretty scene. Let us pass over the autumn and winter months. During a portion of this time, we ourselves were absent in the country; and, when at home, we remember but little of what happened. There was little or no variety to remark upon; or, possibly, our curiosity had become abated. At last, spring came, and with it came a thousand signs of cheerfulness and life. The plane put forth its tender leaves; the sky grew blue over-head (even in London); and the windows of the once melancholy house shone blushing with many flowers. So May passed; and June came on, with its air all rich with roses. But the lady? Ah! her cheek now waxed pale, and her step grew weak and faltering. Sometimes she ventured into her small garden (when the sun was full upon it): at other times, she might be seen, wearied with

needle-work, or sitting languidly alone; or, when her husband was at home (before and after his hours of business), she walked a little, leaning on him for support. His devotion increased with her infirmity. It was curious to observe how love had tamed the high and frolicsome spirit of the man. A joyous and, perhaps, common manner became serious and refined. The weight of thought lay on him — the responsibility of love. It is thus that, in some natures, love is wanting to their full development. It raises, and refines, and magnifies the intellect, which else would remain trivial and prostrate. From a seeming barrenness, the human mind springs at once into fertility — from vagueness into character — from dulness into vigour and beauty, under the 'charming-gaze' of love. But, let us proceed: — On a glittering night in August, we saw lights flashing about the house, and people hurrying up and down, as on some urgent occasion. By degrees the tumult subsided; the passings backwards and forwards became less frequent; and at last tranquillity was restored. A single light, burning in an upper window, alone told that some one kept watch throughout the night. The next morning the knocker of the house was (we were told) shrouded in white leather; and the lady had brought her husband a child. We drank to its health in wine. For a few days, quiet hung upon the house. But it was doomed speedily to depart. Hurry and alarm came again. Lights were seen once more flickering to and fro. The physician's carriage was heard. It came, — and departed. The maid now held her apron to her eyes. The husband, burying his face in his hands, strove (how vainly) to hide a world of grief. Ere long, the bed-room window was thrown open — the shutters of the house were closed; and in a week, a hearse was at the door. The mystery was clear — she was dead! — She died! No poet ever wove around her the gaudy tissue of his verse. The grave she sleeps in is probably nothing more than the common mould. Her name even is unknown. But what of this? She lived, and died, and was lamented. The proudest can boast of little more. She made the light and happiness of one mortal creature, fond and fragile as herself. And for a name — a tomb — alas! for all the purposes of love, nothing is wanted save a little earth — nothing but to know the spot where the beloved one rests for ever. We fear, indeed, to give the creature whom we have hoarded in our hearts, to the deep and ever-shifting waters — to the oblivion of the sea! We desire to know where it is that we have laid our fading treasure. Otherwise, the pilgrimage is as easy (and as painful) to the simple churchyard hillock, as to the vault in which a king reposes. The gloomy arches of stately tombs — what are they to the grandeur of the overhanging heavens? and the cold and ghastly marble, how poor and hideous it is, in comparison with the turf whereon many a daisy grows! The child survived. The cares lately exhausted on another were now concentrated on a little child. The solemn doctors came, and prescribed for it, and took their golden fees. The nurse transferred to it her ready smiles. The services which the mother purchased were now the property of another claimant. Even the father turned towards it all of his heart which was not in the grave. It was part of her who had strewn sunshine in his path; and he valued it accordingly. But all would not do. A month, — 'a little month,' — and the shutters were again closed. Another funeral followed swiftly upon the last. The mother and her

child were again together. From this period, a marked change arose in the man's character. The grief which had bowed him down at his wife's death (relieved a little by the care which he bestowed upon her child), now changed to a sullen or reckless indifference. In the morning he was clouded and oppressed; but at night a mad and dissonant jollity (the madness of wine) usurped the place of his early sorrow. His orgies were often carried into the morning. Sometimes he drank with wild companions; sometimes he was seen alone, staggering towards the window, stupid and bloated, ere the last light of the autumn sunset concealed him from our sight. There were steadier intervals, indeed, when reflection would come upon him, — perhaps remorse; when he would gaze with a grave (or oftener a sad) look upon the few withered flowers that had once flourished in his gay window. What was he then thinking of? — Of vanished hopes and happy hours? Of her? her patience, her gentleness, her deep untiring love? Why did he not summon up more cheerful visions? Where was his old vivacity, his young and manly spirit? The world offered the same allurements as before, with the exception only of one single joy. Ah! but that was all. That was the one hope, the one thought, that had grown vast and absorbed all others. That was the mirror which had reflected happiness a thousand ways. Under that influence, the present — the past — the bright to-come — all had seemed to cast back upon him the picture of innumerable blessings. He had trod 'even in dreams upon a sunny shore.' And now —! But why prolong the pain and disgrace of the story? He fell, from step to step. Sickness was on his body; despair was in his mind. He shrank and wasted away, 'old before his time;' and might have subsided into a paralysed cripple or a moody idiot had not death (for once a friend) come suddenly to him, and rescued him from further misery. He died, as his wife and child had died before him. The same signs were there — the unnatural quiet — the closed shutters — and the funeral train. But all, in their time, disappeared. And in a few weeks, workmen came thronging again to the empty house — the rooms were again scoured — the walls beautified. The same board, which two years before had been nailed to the wall, with the significant words, 'To Let' upon it, was again fixed there. It seemed almost as though the old time had returned again; and that the interval was nothing but a dream. And is this all? — Yes; this is all. I wish that I could have crowned my little tale with a brighter ending. But it was not to be. I wish even that I could have it more heroic, or have developed some grand moral for your use. As it is, it contains little beyond the common threadbare story of human life — first hope, and then enjoyment, and then sorrow, all ending quietly in the grave. It is an ancient tale. The vein runs through man's many histories. Some of them may present seeming varieties — a life without hope or joy — or a career beginning gaily, and running merrily to its close. But this is because we do not read the inner secrets of the soul — the thousand thousand small pulsations, which yield pain or pleasure to the human mind. Be assured, that there is no more an equality in the heart than in the ever-moving ocean. You will ask me to point out something from which you may derive a profitable lesson. Are you to learn how to regulate your passions? to arm your heart with iron precepts? to let in neither too much love nor sorrow? and to shut out all despair? Some wise friend will tell you

that you may learn never to lean too much on others; for that thereby you lose your independent mind. To be the toy of a woman—to rest your happiness on the existence of a fragile girl, whom the breath of the east wind may blow into the dust, is any thing but the act of a wise man. And to grieve for her when dead—to sigh for what is irrecoverable! What can be more useless? All this can be proved by every rule of logic. For my part, I can derive nothing for you from my story, except, perhaps, that it may teach you, like every tale of human suffering, to sympathise with your kind. And this, methinks, is better, and possibly quite as necessary, as any high-wrought or stern example, which shuts the heart up, instead of persuading it to expand; which teaches prudence instead of love; and reduces the aim of a good man's life to a low and sordid mark, which all are able, and most of us too well contented, to reach. We should not commit ourselves to the fields, and inhale the fresh breath of the spring, merely to gain strength to resume our dry calculations, or to inflict hard names upon simple flowers. We should not read the sadness of domestic history, merely to extract some prudent lesson for ourselves. We should open our hearts beneath these great influences, and endeavour to learn that we possess the right, the power, nay, the wish (though it may sleep) of doing good to others, to a degree that we little dream of. So persuaded am I of this truth, that I have invented a sentence wherein to enshrine it. And I hope that you will not entirely condemn this, until you have given it the consideration of a friend. It is this:—“Let but the heart be opened, and a thousand virtues will rush in.”

*Changes produced on the Nervous System by Civilisation considered, according to the Evidence of Physiology and the Philosophy of History.* By Robert Verity, M.D. &c. &c. 8vo. pp. 79. London, Highley.

“THE highest physiological authorities of modern times agree in maintaining that the general nervous system is an absolutely necessary condition for the manifestation of the many kinds of activity, animal, moral, and intellectual, which take place in the human subject; and it has been regarded, with great truth, as a characteristic feature of these later times, that the superior functions of this system have been universally expressed with a plenitude, extension, and energy hitherto unrecorded in the history of man.” So says Dr. Verity, in what we can only regard as an essay upon the subject proposed, written in the style of the transcendental school of Germany, but every where furnishing evidence of a mind well stored with knowledge, and pregnant with high philosophical feeling. The laws of the separate and distinct functional operation of the nervous system, first exposed by Dr. Gall, and developed by Sir C. Bell, Magendie, and Flourens, have lately received a further accession from the labours of Dr. M. Hall and Mr. Grainger; and the progress of the development, as entailing size and activity, or, as expressed by the author, “plenitude, extension, and energy,” from the savage to the civilised condition, has been well shewn by the various comparisons instituted between the cerebral systems of the ancient Peruvians and Egyptians, and those of more modern races of people; but the pleasures that accrue to individuals, and hence the general advantages that result to society at large, and to civilisation, from the tempered use of all the faculties, intellectual, moral, or organic, with which the Maker has endowed man, and

the evils, on the contrary, that result from the misuse, abuse, or infringement of the same laws, have never been put forth with such simplicity of eloquence and force of feeling as in the “Constitution of Man,” by Geo. Combe. Our author travels from the great nations of antiquity to the period of the northern migrations; and from the times of a pure feudalism, through crusades and chivalry, to the modern influences of a benign and intellectual Christianity, in a style which fits the magnitude of the subject, and marches onwards with a vigorous and a stately step. The representatives of the high civilisation of modern times cannot be viewed to more advantage, when labouring under functional disorder, than when considered in relation to the modified type of temperament produced by the increased proportion of the nervous element in their organisation; and such considerations and studies cannot but always add to the philosophy of the principles upon which medical science rears its superstructure.

#### MISCELLANEOUS.

*Phantasmion.* Pp. 387. London, 1837.

Pickering.

THIS is a genuine fairy tale, of the Undine kind, and, consequently, German in form and texture. Not only black spirits and white, blue spirits and gray, but spirits of flowers, spirits of the earth, spirits of the insect tribes, water-witches or demons, and, in short, all sorts of imaginary beings, figure on the scene, and take principal shares in the adventures and incidents. If there be any allegorical meaning or moral inference, we have not detected either; and can, therefore, merely speak of the wildness of the story and the beauty of some of its descriptions. Of a youthful sovereign it is said, that “his pleasures were so closely set, that they hindered one another's growth;” and this is the prettiest sentence we have found in the volume.

*Verba Consilii; or, Hints to Parents who intend to bring up their Sons to the Medical Profession.* By W. Hempsen Denham, F.R.C.S. 12mo. pp. 101. London, Churchill.

THIS little book, professing to be hints to parents, is, for the most part, of a polemical nature. That amelioration is requisite, by the lapse of time, in all human institutions, is now a historical fact; but, as to how far changes are to be carried, will always be the point upon which individuals will split, and thus, in professions as in politics, there will always be a movement and a conservative party. The author, for example, considers it as a national calamity, that a man should be allowed to embark in the medical profession without being endowed with superior powers of mind, which, it would strike many persons of ordinary powers, might frequently be a matter of dispute; and he further thinks that every country and town practitioner of eminence (and who, in his own small coterie, is not?) should be able to qualify his own pupils for practice. The results of such a proceeding, we think, it would not require a superior mind to foresee. The best and most practical part of the book is taken, acknowledgedly, from the “Lancet,” and the grammar of the original is not always correct; for example, in the Dedication, he says: “Professing a mind acutely sensitive upon every topic which involves, in its consequences, the respectability and usefulness of the medical character, you have often deeply deplored the existence of the defective method of educating him.” Him is here the character. There is,

in the following sentence, some comfort for the professional man. It is in allusion to the requisites of a lecturer who describes deviations in structure:—“To be able to depict with the elegance and expression of a Lawrence or a Reynolds, or to attempt the bold sublimity of a Rembrandt, is not necessary, nor to be expected (although the talent which enabled these artists to give, as it were, life and animation to canvass, is almost to be adored); but that humbler, though equally useful power, by which we are able to give visibility to the airy forms of thought, is a great acquisition to the physician.” What a pity that he who penned the above is not an honoured and famed professor!

*The Parliamentary Pocket Companion, for 1838, including a Compendious Peerage, &c. &c. &c.* London, Whittaker.

A MOST useful, seemingly a very correct guide, not only to the legislature, with notes of their residences, connexions, opinions, &c. but containing other necessary information respecting parliament and parliamentary matters. It appears, from the members marked as new in the House of Commons' list, that there are a hundred and thirty of the six hundred and fifty-eight who were not in the last parliament; a very considerable change in the constituency at this important period.

#### ARTS AND SCIENCES.

##### GEOGRAPHICAL SOCIETY.

Nov. 27. Mr. Hamilton, president, in the chair.—Read, extracts from various papers: 1st. From Captain Alexander, giving the details of his recent journey in South Africa, across the Orange River, thence to the northward, beyond the tropic, and as far as Walvich Bay; where he and his party arrived, almost starved, on the 19th of April. Thence he travelled 300 miles to the eastward; and, not being able to get a guide to proceed further to the northward, he returned to the Orange River, and reached Cape Town on the 21st of September, just one year and ten days since his departure, during which he had travelled 4000 miles. On the same day, the expedition to Australia, which left England in August last, arrived at the Cape; and, by the last account (Oct. 1), Lieutenants Grey and Lushington had freighted a small schooner, to proceed direct to their destination. 2d. From Professor Chaix, at Geneva, stating that, in the course of some inquiries, instituted by order of his government, he has found the study of geography and statistics becoming very general; and steps were taking to make the geography of that beautiful land of lakes and mountains familiar to the Swiss people. He further mentions, that Colonel Dufour's large map of the country was fast advancing; as, also, an orography, or description and height of mountains for 25 leagues around Geneva. 3d. The latest intelligence from Captain Burnes, dated Bombay, September 9th, mentioning his arrival at Attok. He had made a slight *détour* as far as Bahwulpur, on the River Sutlej; and thence had continued the examination of the Indus as far as Attok, on his road to Cabul. The chief interest of this evening's meeting was the presentation of the gold medal of the Geographical Society at Paris to Captain Back, liberally awarded to him by that body, for his former journey to the shores of the Arctic Ocean; and we were gratified to notice that there was a very numerous attendance of his brother officers and friends.

The President, on presenting the medal, said: Captain Back, I have the pleasure to

acquaint you, in the presence of your numerous friends before us, that the Geographical Society of Paris, in testimony of their high appreciation of the service which you have rendered to the cause of discovery, in the course of your expedition to the Arctic Regions in 1832-3-4, have awarded you their gold medal for the year 1834; and as this, their determination, took place during your absence from England, in the prosecution of your late expedition towards Wager Inlet, the letter announcing it to you, and the medal itself, have been consigned to the Royal Geographical Society of London. I need not enlarge on the gratification which I feel in being the organ of our sister society on this occasion. The details and result of your expedition to the Arctic regions of the American continent, in search of Sir John Ross and his companions, have been long before the world; and we remember the delight with which we hailed your return, after having verified the extent and configuration of the Great Slave Lake, and the succession of lakes, and course of the river connecting them with the coast, where you ascertained the great probability that the northern coast of America takes a range considerably to the south of the supposed peninsula of Boothia Felix. Since this expedition, which added much to our geographical knowledge, you have been appointed to the command of H. M. S. *Terror*, on another voyage of discovery, the result of which, it was hoped, would have demonstrated to us, besides various other points of high interest, the water connexion, or separation by land, between Prince Regent's Inlet and Point Turnagain. But you and your dauntless companions have been baffled by the adverse power of the elements. And, after contending against them during the whole of a most severe winter, which may be said to have lasted, at least, three parts of the year, the utmost you have been able to accomplish (not to allude to the meteorological and other scientific data which you have acquired, and the correction of the line of Southampton Island, of which we have heard, this evening) has been to bring home your party in safety. But, as some of the most illustrious generals who adorn the pages of history have exalted, instead of tarnishing, their fame, by a masterly retreat, so have you not only acquired additional glory by the victory you gained over the physical difficulties which surrounded you, and opened new proofs of what the skill and hardihood of a British sailor can achieve, but you have enlarged the sphere of the supposed physical endurances and capabilities of man; and I understand that your brother navigators, who have preceded you, declare that the sufferings which you and your crew underwent, were beyond all which they had ever witnessed or conceived. You have thus put the seal to another triumph of order, discipline, and obedience, when under the guidance of skill and experience; and, as in naval history it is recorded that the wreck of a leading ship has, ere now, proved the safety of the rest of the fleet, so we may be confident that your experience, your sufferings, your failure, may prove the auspicious beacon to point the way to future discoveries in the yet unknown and unsurveyed regions of the globe. Only one word more. This is the third time that the Geographical Society of Paris have awarded their gold medal to an Englishman. Burnes, Ross, and yourself, have received it within the last few years: a circumstance, no less honourable to the liberal feelings of the one nation, than to the deeds and successes of the other.

Captain Back, in reply, said: I find a difficulty, sir, in adequately expressing my feelings on the reception of so valuable a tribute of foreign approbation; for, though our chief desire must be to deserve the esteem of our own countrymen, yet the testimony of a corresponding sentiment from so distinguished a body as the Geographical Society of Paris, will ever be among the proudest recollections of my life. Such a reward will serve to stimulate candidates for discovery—many of whom I trust are now present—to prosecute, with zeal and energy, the path they have chosen, confident that their cares and toils will be appreciated, not only in their own country, but also by scientific societies and individuals both in France and throughout Europe at large. To you, sir, personally, for the gratifying manner in which you have communicated to me the flattering and liberal award of the Geographical Society of Paris, allow me to offer my sincere thanks.

With reference to my late voyage, I have little to add, except that from our entrance into the ice to the moment of quitting it, was one continued struggle against enormous floes and heavy masses. The ship was at its mercy, and was frequently thrown into the most perilous situations; but when some convulsion occurred which was invariably preceded by a furious subaqueous rushing that produced a loud rolling noise, in an instant ponderous pieces were upheaved forty feet high, and, at the same time, icy waves, a third of a mile in extent, rolled quickly forward, overturning and throwing up slabs and fragments of tons weight, and yet there was little or no water to be seen. These shocks strained the frame of the ship dreadfully; she shook and trembled so violently that people fell down on the deck, the timbers cracked, and beams, eighteen inches square, were bent; until the extreme pressure forced the fore part of the keel on the surface, so that one might have crept beneath it, while the stern was half buried between two ridges of ice. It was then that the moving waves, high above one quarter, seemed on the point of overwhelming us; a few feet more and we must have been crushed to atoms; they even touched the stern, when, as if arrested by the invisible hand of Providence, the whole turmoil suddenly ceased, and a deathlike stillness prevailed.

A few words with respect to currents. By former observation, a current had been found setting from west to east, through Behring's Straits, along the coast of America to the entrance of Back's River; and Sir E. Parry had described one as running through Fury and Hecla Straits. On my late voyage the same result was manifested along the north-eastern shore of Southampton Island, by which means the *Terror*, when fixed in the ice, was carried upwards of one hundred and forty miles past the opening of Fox's Channel and Hudson's Bay, fairly into Hudson's Strait; and had she not been liberated from her icy shackles, there can be no doubt but that she would have continued to drift into the Atlantic. The evidence for the direction of the current may, therefore, be considered as conclusive, and fully bears out what had been long ago stated by Sir John Barrow, the ablest advocate of Arctic discovery. The obstacles opposed to the late expedition do not affect the probability of success in any future attempt, as they are solely attributable to a most severe and unparalleled season, one so different from all preceding it, that the largest ship of the Hudson's Bay Company was so hampered by ice at her anchorage, as to be unable to land her cargo, and was compelled to

return to England with it, being the first circumstance of the kind that had happened for nearly a century. A smaller vessel was crushed and destroyed altogether by the ice. In following up this service, I am of opinion, that the course to be taken should be to the south, and not to the north of Southampton Island; for experience shews, that on the latter the ship is exposed to the drift, from the north and west, of ice three hundred miles in extent; and, if the season prove unfavourable, is deprived of a place for shelter, or, in the event of accident, is thrown on a desolate coast. On the contrary, by taking the former route, the island acts as a barrier to keep off the ice, leaving nothing to contend with but the comparatively small quantity usually found in the *Welcome*, while both harbours and provisions would, in most cases, be met with along the indented outline of the main land. Other difficulties, arising from locality, might be surmounted, by having a tolerably fast-sailing vessel. The reasons, therefore, for the practicability of prosecuting the survey of what remains to be done to complete our knowledge of the American coast, remain unaltered; and I sincerely hope, that this Society, from which the proposals for executing the two last expeditions emanated, will continue to exert itself for the same purpose, until the end be accomplished.

Sir John Barrow observed, that he had been referred to by the gallant officer as having advocated the existence of a current from the west, setting through various channels, to the eastward, and even to the Atlantic: he had done so; and it was now full twenty years since he first mentioned it. Sir E. Parry had passed through what was called Lancaster Sound, and through the strait as far as Melville Island, where he ascertained the set of a current from the westward. The same distinguished officer, on another occasion, had also experienced so strong a current in Fury and Hecla Strait, as actually to be stopped by it; while Franklin, Ross, Beechey, and Richardson, had each borne ample testimony to the same flow of current along the sinuosities and shores of the American continent, from Behring's Strait to Point Turnagain. Lastly, driftwood, known to be the production of the banks of large rivers to the westward, was found two hundred miles east of Point Turnagain, not far from Regent's Inlet; and now, Captain Back had informed them that the same current had, in his late perilous situation, driven the *Terror* almost into the Atlantic. He must say, that such evidence appeared to him to decide the question, and thereby fully to justify the previous opinions given on the subject. On contemplating the obstacles which opposed themselves to the late enterprise, and the unprecedented trials to which the crew had been exposed, there was great reason for thankfulness that the ship was enabled to effect her return; and it was also highly creditable to all on board, since discipline and obedience alone could have ensured such a happy result. And it must be gratifying to Captain Back, his officers, and his crew, to know that their exertions were fully appreciated where they most desired that they should be well received. The north-west passage, continued Sir John Barrow, has ever been, to me, a subject of deep interest. I have exerted myself, on all occasions, to further its accomplishment; and I do most sincerely hope that, after so much has been done by this country—after having passed the threshold—we shall not suffer any other nation to snatch away the wreath to which British enterprise is so justly entitled.

## BOTANICAL SOCIETY.

Nov. 29. Anniversary meeting. Mr. Gray in the chair.—The secretary read the report of the council, from which it appeared that the number of members was 60, and the number of specimens in the herbarium was 4819, including ferns; and 707 species. There remained 3506 duplicates for distribution among the members. Specimens of the following new plants have been sent to the Society:—*Cinclidium stypicum*, a new moss, found by Mr. R. Leyland, in Halifax; specimens of *Claytonia alcinoides*, found wild, near Chatsworth, by Mr. Baxter, of Oxford; and a large number of specimens of *Spartina alternifolia*, found by Dr. Macreight, at Itchen Ferry, Southampton. A ballot then took place for the officers for the year 1838, and Mr. Gray was re-elected president, and he appointed Dr. Macreight and Mr. Johnson, vice-presidents. A splendid drawing of the *Victoria Regina*, recently discovered by Mr. Schomburgk, in British Guiana, was on the table, and excited much interest. The meeting was very numerously attended, comprising many ladies, members of the Society.

LITERARY AND LEARNED.  
UNIVERSITY INTELLIGENCE.

Oxford, November 23d.—The following degrees were conferred:—

*Masters of Arts*.—D. R. Godfrey, Michel Scholar of Queen's College; H. Cooper, Worcester College; Rev. R. P. Allen, Magdalen Hall; Rev. T. Jackson, St. Mary Hall; J. G. Seymer, Alban Hall.

*Bachelors of Arts*.—E. W. Morris, New Inn Hall; G. Atty, Lincoln College; R. G. Craufurd, Magdalen Hall; Hon. W. Howard, Christ Church; E. J. Fensley, Fellow, W. R. Wardale, M. Harrison, Scholars of Corpus Christi College; F. M. Knolls, Demy of Magdalen College; H. Highton, Exhibitor of Queen's College; W. D. Furneaux, Scholar, W. D. Poore, T. D. Bernard, E. T. Williams, Exeter College; H. Formby, Scholar, C. K. Grenside, R. Town, Brasenose College; W. Lonsdale, Oriel College; S. G. Dudley, Jesus College.

## ROYAL SOCIETY.

THURSDAY being the anniversary, the usual medals were awarded: viz. the royal medal to the Rev. William Whewell, for his various papers on the tides; the Copley medals to Mr. Becquerel, for his papers on electricity; and to John Frederick Daniell, Esq., for his papers on voltaic combinations. His royal highness the Duke of Sussex was absent, in consequence of the injury done to the cap of his knee by his recent fall in the house of lords. The royal duke was re-elected president. Francis Baily, Esq., the Earl of Burlington, John George Children, Esq., Davies Gilbert, Esq., the Marquess of Northampton, and Stephen Peter Rigaud, Esq., were elected vice-presidents; and Samuel Hunter Christie, Esq., was appointed one of the secretaries, *vice* Mr. Children.

## SOCIETY OF ANTIQUARIES.

THURSDAY, Nov. 23. Mr. Hudson Gurney in the chair.—Mr. Dufour exhibited two short swords, or daggers, recently found in the margin of the Thames; their age is of the fifteenth, or early in the sixteenth century. Mr. Pettigrew communicated an account, with various drawings, of a mummy brought from Egypt by the late John Gossett, Esq., and presented by his father, Isaac Gossett, Esq. to the museum of the island of Jersey. The hieroglyphics on the cases, or coffins, described the enclosed body as a female and a princess, but her name was carefully obliterated: the age was in the time of the Pharaohs, about 1430 years before Christ. Part of the communication being read, the remainder was postponed until the next meeting.

Thursday, Nov. 30. The Earl of Aberdeen

in the chair.—The remainder of Mr. Pettigrew's paper was read. Round the head of the mummy was a wreath of acacia and bay-leaves, mixed with lotus flowers. After removing several layers of bandages, he came to a coat of asphaltum, which had to be cut through; and, among the bandages, between the asphaltum and the body, were several necklaces, emblems, deities, &c. The embalment appeared to have been performed in the highest and most expensive mode, and exhibited some varieties in the proceeding which Mr. Pettigrew had not before met with. The brain was not abstracted in the usual way, through the nostrils, but by a passage cut up the interior of the neck, driving the root of the tongue and its bones on one side, and making one cheek larger than the other. The intestines were divided into four portions, as he had always found them, though differently placed in different subjects, and, sometimes, not within the wrappings at all, but deposited in four canopic vases, bearing the four deities of the Amenti. But an extraordinary circumstance was, that the body was not that of a female, nor of the era designated on the cases, but of a priest, and, probably, of the age of the Ptolemies. It was known that the priests made a traffic of the tombs and sepulchral tablets; and, when a family died off, so that the fees to the priests ceased, they obliterated the name, and disposed of the sepulchre to others. In the present instance, it is evident they had removed the body from its coffins, and, having struck out the name, applied them to another.

LITERARY AND SCIENTIFIC MEETINGS  
FOR THE ENSUING WEEK.

*Monday*.—Entomological, 8 P.M.; Phrenological, 8 P.M.; Medical, 8 P.M.; Royal Institute of British Architects, 8 P.M.

*Tuesday*.—Linnæan, 8 P.M.; Horticultural, 3 P.M.; Architectural Society, 8 P.M.

*Wednesday*.—Society of Arts, 7½ P.M.

*Thursday*.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Zoological, 3 P.M.; Islington Literary, and three succeeding Thursdays, 14th, 21st, and 28th (Mr. R. Addams on Acoustics).

*Friday*.—Astronomical, 8½ P.M.

*Saturday*.—Westminster Medical, 8 P.M.; Electrical, 7 P.M.

## FINE ARTS.

## PAINTING ON GLASS.

THROUGH the kindness of a friend, we have lately seen a superb specimen in this department of art,—the intended window for St. Mary's College, Oswest, near Birmingham; designed and executed by Mr. W. Warrington. The subject is the "Assumption of the Virgin," surrounded by the Apostles, Saints, and Martyrs of the Church. The name of the artist has hitherto been unknown to us; but, if we may judge from the present sample of his talents, he will not long remain a stranger to the public, and especially to the connoisseurs in this class of ornamental and decorative painting. Unless we are much mistaken, it will be acknowledged,—with reference to particular colours, which have been thought unattainable in modern art,—that Mr. Warrington produces not only the brilliant ruby and crimson of the old paintings on glass, but also tints of a compound and neutral character, unrivalled of their kind. The style of the painting, as well as its character and costume, resembles that of the most splendid of the ancient missals; the works of Hemmelinck, Albert Durer, Van Eck, and others of the school considered the most appropriate to Gothic architecture. This gem-like assemblage of colours is arranged with so much skill and taste as to produce to the eye an effect satisfactory and complete. It must be

highly gratifying to Mr. Pugin, the architect of the chapel, and to Mr. Warrington, whose performance we have just noticed, to have been instrumental, by their combined talents, in the production of so fine a religious edifice.

We understand that the gentleman to whom we were indebted for a sight of this beautiful specimen of glass-painting, is preparing an extensive treatise on the subject; and we do not doubt, that his knowledge as an antiquary, and the diligence of his researches, will render it a very valuable publication; and that this branch of the fine arts, as applied to the mansions of our nobility, as well as to cathedrals, churches, and other sacred buildings, will, ere long, vie with any other, and come in for its fair share of public encouragement.

## NEW PUBLICATIONS.

*The Beautiful Gate of the Temple*; engraved by Freebairn, with Bates's Anaglyptograph. Hodgson and Co.

THIS is the first of a set of the cartoons which is about to be published, and it is, of its class of art, by far the most beautiful work that has yet been produced: the tone of the print is more silvery, and brilliant, and delicate, than any similar production that we have yet seen; for, besides that its proportions are accurately traced by the perfect and beautiful machine of Mr. Bates, the tone in which it is etched, and the artist-like beauty of the work thus produced by Mr. Freebairn, place it far above any specimen yet produced by our Continental neighbours. Instead of the bronzed, black, spotty appearance of the "Canterbury Pilgrims," produced by the French, with misbegotten and distorted heads and other projecting parts, in this print all is in place, all is beautiful. We say, let them beat it if they can; for, besides the defect of their machinery which we have so clearly shewn, the art of superintendence in which they at first excelled, is, by this specimen, far surpassed. We scarcely thought it worth our while to advert again to the barefaced claims to accuracy, in spite of our exposure, set forth by the French party in the trumpety mis-statements at the end of the "Authors of England," which we lately noticed; and in which not one piece of the ruling is "mathematically true." Why, we ask, was the legend and margin of the Henry IV. left out? and why were the eyes (engraved too large), the mouth, and the beard, in great part, put in cross lines with the graver? In the last Numismatic Journal, the Seine and coronation medals were declared, by the same authority, to be "mathematically correct," when, so far from being so, the head on the medal by Pistrucci, was so lop-sided and distorted, that the eyelid was lost in the brow. Every numismatist who could compare the engraving with the medal, would instantly see the monstrosity of the head, and laugh at the monstrosity of the assertion. The party may be assured, that if they cannot prove their superiority by their works, we are not stupid enough to close our eyes, and believe their assertions. We would rather avoid, unless provoked to it, alluding to them again. Let each, the French and the English, the wrong and the right, as we believe, take their stand upon the merits of their productions: it must come to this: but we will not be silent when we see error foisted upon us for truth: let them, we say again, beat this cartoon of the Beautiful Gate if they can. We shall be glad to see such excellence from any quarter; if we rejoice that it is from the ingenuity and skill of our countryman, 'tis an honest subject for self-congratulation as Englishmen.

*Ray's Works, chiefly Edinburgh Portraits.* Parts 2 and 3. Paton, Edinburgh; Smith, Elder, and Co. London.

ABOVE thirty more of the distinguished and odd personages who were resident in the northern capital in the "days of lang syne." They are to the full as characteristic as their predecessors.

### ORIGINAL POETRY.

#### THE ENGLISH GIRL.

SHE laughs and runs, a cherub thing;  
And proud is the doting sire  
To see her pluck the buds of spring,  
Or play by the winter fire.  
Her golden hair falls thick and fair,  
In many a wavy curl;  
And freshly sleek is the ruddy cheek  
Of the infant English girl.

The years steal on, and, day by day,  
Her native charms expand; [ray,  
Till her round face beams in the summer  
Like the rose of her own blest land.  
There's music in her laughing tone,  
A darker shade on the curl,  
And Beauty makes her chosen throne  
On the brow of the English girl.

She is standing now, a happy bride,  
At the holy altar rail,  
While the sacred blush of maiden pride  
Gives a tinge to the snowy veil.  
Her eye of light is the diamond bright,  
Her innocence the pearl;  
And these are ever the bridal gems  
That are worn by the English girl.

ELIZA COOK.

### DRAMA.

*Drury Lane.*—In the *Daughter of the Danube*, the performance of Wieland is so perfectly *impeish*, that it is alone enough to recommend a drama; but the dances are also very fanciful, appropriate, and pleasing. On Thursday, *Joan of Arc* was produced as an opera, the music by Balfe. At so late an hour, and with so long a piece, all we have time to observe is, that if it were obliged to be shortened, as our notice is, it would be the more entitled to praise and favour.

*Covent Garden.*—On Tuesday evening, the play of *Riches, or the Wife and Brother*, and most judiciously reduced from five to three acts, and adapted from Massinger's *City Madam*, was produced here, and with great effect. The principal character, *Luke*, has always been a greater favourite with us than *Sir Giles Overreach*; for it has more nature and less extravagance, and yet equal force as a dramatic character. To say that Macready embodies it perfectly to our high conception of its capabilities, is all that we need say: we never saw a more striking personation. *Lady Traffic* was sustained by Miss Taylor in a very spirited manner; but we are not sure that her reading of the part is correct. *Lady Traffic* is a proud and stately city dame, and of a certain age. There is no flatness or fussiness about her; but *hauteur* and insolence. Now, though Miss Taylor acted several scenes admirably, and justly obtained great applause, she did not represent the character as, in our opinion, it was drawn by the author. Bartley, in *Sir Maurice Lacey*, is perfect. His good-nature is redolent of the heart; and every word he uttered took its effect upon the house. Miss P. Horton, E. Phillips, and Mrs. Garrick, did all that could be done for their slight parts—and the same compliment may be paid to Messrs. Vin-

ing, Anderson, and Meadows. Didear was a capital *Sir John Traffic*; and the whole was performed with vigilant attention to every point, even the most minute, in scenery and action.

A new grand historical and legendary drama, called *Joan of Arc*, followed, and was, indeed, in every respect what such a spectacle can be made. The story is full of interest; and the heroine of Orleans, witch and saviour of her country, with appliances natural and supernatural, is performed with great power by Miss Huddart. Of the other parts, the chief novelties are Anderson, as *Sir Lionel*, done with very fine feeling; Meadows, who looked admirably, and played no less so, as a wizard; Mr. Serle and Mr. Pritchard, as the *King of France* and the bastard *Dunois*. But the grand attraction is in the scenery—the most beautiful and splendid that can be imagined. Some new effects of light, and dresses the most gorgeous, added to the illusion; and at the fall of the curtain the waving of handkerchiefs and shouts of cheering testified to the delight of the audience.

*Opera Buffa.*—On Thursday, Rossini's opera, *L'Inganno Felice*, was the first performance here; and we think not very deserving of revival, as the music is but meagre, with the exception of an excellent trio, and as good a quartet. Catone and Sanquirico were the props of the opera. *Il Campanello*, a farce of Donizetti's, and played for the first time in this country, made ample amends for any languor in its precursor. It is full of spirit and mirth, and just what an opera buffa should be. The music is very sweet, and, as well as the acting, was admirable. F. Lablache far excelled any thing he had formerly done. Sanquirico was also very clever. Madame Francheschini acquitted herself entirely to the satisfaction of the audience; and Madame Bellini sang her slight part very agreeably. The house was very full (including her majesty, who seemed to enjoy both the stage and before the curtain very much, during frequent peeps at the latter), and continued laughter rewarded the comic efforts in *Il Campanello*.

At the *St. James's*, we have had a laughable burletta, and a domestic drama. *Angeline*, the latter, a feminine *Monsieur Jacques*, very sweetly played by Mrs. Stirling, on whom, indeed, the whole interest of this piece rests, has been quite successful. A touching story of early bereavement, and consequent sadness in after life,—an unexpected and unhoped-for return, comprehend the slight plot. In the first scenes, the depression caused by calamity, mixed with the natural vivacity of the Frenchwoman, were faithfully portrayed by Mrs. Stirling,—and in the last, the overwhelming joy, upon recognising the lost lover, was also very faithfully given. Gardner has a slight facetious part, which he plays well. We must not forget a devilish sort of character, in the shape of a sexton, acted admirably by Mr. Hollingsworth. The burletta of the *Siamese Twins*, new at this house, is a most laughable affair. Wright and Hall are very funny in it.

### SIGHTS OF LONDON.

*Gallery of the Society for the Illustration and Encouragement of Practical Science.*—On Saturday, the Adelaide Gallery was re-opened under new auspices, and with considerable alterations; a floor having been added by sinking to a lower story, and making the quondam sides of the original ground-floor into a gallery. The only inconvenience we perceived was from an increase of heat, in consequence of descending

towards the stories in the lower regions; but the general aspect and conveniences of the gallery are greatly improved. H. R. H. the Duke of Cambridge, with his duchess and son, Prince George, were among the visitors on this occasion; and the place was crowded till the shades of evening rendered exploration vain. We have always spoken highly of this resort for the acquisition of useful information; and several novel features seem to give it still stronger claims to our approbation. The illustrations of chemical and mechanical sciences are excellent, as before, especially in electricity and magnetism, with a fine and powerful apparatus; but there has been added other means of instruction, of which we think the value may, in some measure, be surmised from the following catalogue extracts:—

"The process of manufacturing Ornaments and Artificial Fruit and Flowers in Alabaster and Wax, is carried on during the day, and explained to visitors by Signor Carotti; the process of Lithographic Printing is carried on during the day, and explained to visitors by Mr. Baker; the manufacture of Glass Toys, by means of a table blow-pipe, is carried on during the day, and explained to visitors by Mr. Miles; a Jacquard Loom, in which the process of figured silk-weaving is carried on during the day, and is explained to visitors by Mr. Catherall, Weaver; a Twenty-shuttle Riband Loom."

A series of glass-cases, as follow:

"The glass-cases on the western-end railing contain, 1. Specimens of Dried Leaves, intended to illustrate the technical terms used in Botany; 2, 3. Specimens of the principal Plants, British or Foreign, either used for Food, Medicine, or in the Arts; 4, 6. Continuation of the Botanical Specimens; 7, 8. Collection of Minerals, illustrating the Geology of Saxony, formerly in the possession of Werner, and labelled by one of his pupils; 9. Collection of Minerals from parts of the United States; a few Minerals from the neighbourhood of Niagara; 10. Miscellaneous Geological and Mineralogical Specimens; 11. Specimens of Marbles, from the Secondary Limestones, British and Foreign; 12. Specimens of Slates, specimens of Topazes, Garnets, &c. from S. America, specimens of Agates, Jaspers, &c. cut and polished; 13, 14. Specimens of various Minerals, interesting either in a scientific or economic point of view; Geological Model of the Isle of Wight; Bottle, containing the Colours of Sands from Alum Bay; 15. Iron Ore; 16. Lead Ore; 17. Copper and Tin Ores; 18. Ores of other Metals; 19. Specimens of Lignites, Coals, &c. from various localities; 20, 21. Mineralogical and Geological Collections; 22. Series of Minerals from Vesuvius and the adjacent district; Specimens of Minerals from the neighbourhood of Vesuvius. Other glass-cases contain: 1-3, a select Collection of British Insects; 4-6, various Organic Specimens, Animal and Vegetable; 7. Specimens of Silicified and Mineralised Woods; Specimens of the Woods used in Ship-building; Specimens of the Fancy Woods used in Cabinet-making; 8. Fossil Plants from the British Coal Fields; 9-12. Series of the British Strata of the Tertiary, Secondary, and Upper Primary Systems, illustrated by the characteristic and other fossils of each, and a specimen of each of the principal strata from different localities; 13. Ammonites, &c.; Fossil Shells, &c. from the Green Sand, &c.; 14, 15. Collection of Fossil Shells, &c. from the Folkestone, Gault, and other formations; 16. Collection of Fossil Shells, &c. from the tertiary formations of North America; Cyathophyllum from Buxton, Westmoreland, United States; 17-19. Fossils, Teeth, &c. of Elephants."

But still more useful, perhaps, are

"Optical Apparatus for illustrating some of the Phenomena of Polarised Light; Series, illustrating the Silk Manufactory, from the raw material to the finished fabric; Specimen of Weaving, considered the most perfect specimen of delicate silk-stocking weaving yet executed; Specimen of British Velvet and Embroidery; Series, illustrating the preparation of the Fine Apple Fibre (*Bromelaceae*), and of the fabrics proposed to be made from it; Series, illustrating the Manufacture of Clocks, Watches, and Chronometers; consisting of the several parts in different stages, with references; Specimen of English and Foreign Types; Series, illustrating the making of Glass; Series, illustrating China Manufactory; Series, illustrating the making of Hats and other articles from Felt; Series, illustrating the Manufactures of Sheffield Cutlery, Files, and other Tools; Series, illustrating the Manufacture of Needles, and Hooks and Eyes, from the rough wire to the finished article; Specimens of Door-knobs, Eacutheons, &c., manufactured from Buffalo Horns; Series, illustrating the Manufacture of Combs, in imitation of Tortoiseshell, from the Horns and Hoofs of the Cow; Series, illustrating the Manufacture of Plated Ware, exemplified in a Candlestick, complete and in its several parts, with descriptions; Series, illustrating the Manufacture of Powder-horns; Series, illustrating the Manufacture of British Plate, or German Silver; Series, illustrating the Manufacture of Britannia Metal, exemplified in a Teapot, complete and in its several parts, with descriptions."

There are, besides, a series to show how

cotton, wool, and flax, are wrought into the manufactured articles; than the whole of which (except visiting the great manufactories themselves) nothing can be more usefully instructive. Hence it is that Britain has her strength, wealth, and glory; and it is well that her sons and daughters should study, and make themselves acquainted with their origin. Models of steam-engines, too, with their improvements, enrich the exhibition; and, in these matters, we have only to express our hope that the society will go on to increase and perfect their representative system.

#### VARIETIES.

**The Philodorian.**—No I. (Walker and Son) of a new magazine of domestic games and amusements, begins in a lively manner, and promises well. Here we have something of chess; Polish draughts; whist (with its combinations, amounting to 635,013,559,600, on the thirteen cards in four hands, and all the possible combinations of the 52 cards, to 16,250,563,659,176,029,962,568,164,794,000, 749,006,376,006,400—not fewer than forty-seven figures!!); English draughts; ecarté (the description of which is ill and indistinctly written); and review notices. We like the plan, and hope it will succeed.

**Mr. J. O. Robinson,** the publisher, and well known to literature and the fine arts as the partner of Mr. Hurst, and intimately connected with the Edinburgh house of Constable and Co., died on Tuesday morning, adding one more to the list of mortality in this class for 1837.

**Dr. Lloyd,** the provost of Trinity College, Dublin, who was president of the British Association, at their meeting in that city, 1835, and who contributed so much to their cordial and magnificent entertainment, died very suddenly, at Dublin, a few days ago. He was a most amiable man, and one of high endowments, not only as a scholar, but in general literature and science. His son, Professor Lloyd, is very eminent in the walks of science.

**Weather Wisdom.**—Last week quite erroneous: for the next, we are told, "The first quarter will bring high winds and rainy weather. Fog and small rain will prevail about the 6th and 7th. The 8th brings a change, and the air grows milder."

**The British Almanac, and its Companion** (Charles Knight) for the ensuing year, are quite equal to any that has gone before. There is ample information on all the usual matters for calendar reference; and the directions for geologists, mineralogists, botanists, &c. &c. are excellent. The epitome of new parliamentary and public intelligence is another valuable feature; and public records, public works, chronicles, and abstracts, fill up the "tattle of the whole" in a very useful manner. The operation of the poor law has a warm defendant in these pages; and there is a little political bias, which, however slight, is not to be commended in productions of this class. *The Working Man's Almanac* (same publisher) is a smaller volume, with much of similar character, and well adapted for the class to whom it is addressed.

**The Royal Guildhall Entertainment.**—A sketch of this spectacle, made under the sanction of the city authorities, by Mr. Deighton, is about to be engraved under the same auspices.

**The Fullerian Professorship of Physiology in the Royal Institution** (vacant by the retirement of Dr. Roget, whose period of professorship had expired), has, we are informed, been filled up by the nomination of Dr. Robert E. Grant, of University College.

**The Ethereal Oil of Wine.**—It is well known that a mixture of the various constituent principles of wine, such as water, alcohol, tannin, tartar, &c., has scarcely any smell; and that, nevertheless, all wines are known by a characteristic odour, more or less developed according to their quality. This odour proceeds from a particular ethereal substance, which resembles an essential oil, and which ought to be distinguished from the aroma, a non-volatile fugacious principle, which does not exist in all wines. When a large quantity of wine is distilled, there is obtained, towards the end of the operation, an oily matter, which is also found in the lees. This ethereal oil forms about a forty thousandth part of the wine. It has a strong savour, and is colourless, at least unless it be combined with a small portion of oxide of copper, which communicates to it a green tint, that may be removed by means of the hydrosulphuric acid. As it is mixed with a free acid, it is purified by frequently agitating it with a hot solution of carbonate of soda, which dissolves the acid, and which does not act on the ether. If the milky mixture which results be boiled, the ether will swim upon the surface, and may easily be separated.

**Ceylon.**—The *Ceylon Chronicle* (No. 9, May 31) gives a brief but interesting return of the exports and imports of that prospering colony. The account stands as follows:

	Imports.	Exports.
1831 .....	£282,968	£153,293
1832 .....	351,223	160,568
1833 .....	320,691	132,628
1834 .....	372,725	145,633
1835 .....	355,076	199,287
1836 .....	411,167	334,519

Upon which the editor remarks, "We are very well aware that our trade is, after all, insignificant, as compared with many other colonies; that a total export of 411,000, is almost a reproach to a colony containing not far short of a million and a half of inhabitants; but it is our sincere opinion, that we are but on the threshold of commercial prosperity, and that the next five years will give a result far exceeding even the last."

**Irish Readiness.**—It is said of the ready-witted Irish, that they never like to confess ignorance of any question put to them, and yet are seldom at a loss for a reply. The following recent dialogue is not a bad illustration of the fact. A tourist, near Killarney, asked a native, "Whose house is that?" and the dialogue ran thus:—"That house, yer honour, that is Mr. Dobbigen's." "Mr. Dobbigen's! It is a fine place. What is he?" "He, yer honour—oh, he was a minor, but now he's of age!"

**Paris Statistics.**—In 1835 there were 7233 individuals brought to trial in France on criminal charges, whereof 2816 were acquitted, and 4407 convicted and sentenced to various punishments.

To death .....	54
Hard labour for life .....	151
..... a fixed number of years .....	777
Seclusion .....	796
Imprisonment .....	2599
Surveillance without any other penalty .....	9
Children under 16 years of age sent to houses of correction .....	20
	4407

#### LITERARY NOVELTIES.

We understand that Mrs. Godwin, the author of "Popular Delineations of Youthful Character," "The Wanderer's Legacy," &c. is preparing for publication a Series of Tales, original and selected, which, emulating the splendour and variety of the "Arabian Nights Entertainments," will, in a moral point of view, be unexceptionable, and in every respect adapted to the juvenile reader. The work will be entitled "The Hail of the Caravan."

Among the literary distinctions conferred on our coun-

trymen by foreign institutions, we are well pleased to see that Sir Graves Haughton has been elected a foreign member of the Institute of France; being now the only Englishman of that station among the individuals of whom the body consists. He was elected by 22 out of 23 votes.

Mr. Schloss, the ingenious publisher of the *Bijou*, has this year contrived a further embellishment of its literary portion. The poems are to be surrounded by engravings, which form a kind of frame. We have seen one or two of the designs, and think these emblematic tablets among the prettiest designs that have come under our notice.

**Archæological Essays.**—The premium for the best essay on the Life of Robert, baron Fitzwalter, has been awarded to G. W. Johnson, Esq. The subject announced for next year is, "Margaret Beaufort, countess of Richmond, the mother of Henry VII., and foundress of St. John's College, Cambridge."

#### In the Press.

**Colloquies.**—Imaginary Conversations between a Phrenologist and the Shade of Dugald Stewart. By Dr. J. Slade. With a portrait of Dugald Stewart.

#### LIST OF NEW BOOKS.

The Book of Beauty for 1838, edited by the Countess of Blessington, super royal 8vo. elegantly bound, 11. 1s.; India proofs, 2l. 12s. 6d.—A Treatise on Geology, by Professor Phillips, in 2 vols. #### TO CORRESPONDENTS.

To the Editor of the Literary Gazette.

SIR,—In transcribing the notice which you were so good as to insert in your *Gazette* of Saturday last, concerning the patronage bestowed by the late Earl of Egmont on the Fine Arts, two errors were committed. The words "and fifty" should have been added to "new and" modern British productions bought by his lordship; and, instead of 170 of the pictures being in Petworth House, it ought to have been stated 190. Let me beg the favour of you to make this known to your readers as soon as you conveniently can, and in whatever way you please, and you will oblige, sir, your humble servant, T. F.

## ADVERTISEMENT,

Connected with Literature and the Arts.

Now publishing,  
**THE CARTOONS OF RAFFAELLE**,  
 etched, on a large scale, from the originals at Hampton  
 Court.

**BULL'S NEW SYSTEM**  
 of supplying FAMILIES, BOOK SOCIETIES, &c.  
 throughout England, Scotland, and Ireland, with all Works,  
 Magazines, and Reviews, regularly for perusal. Full particulars  
 of its advantages, and of the terms on which it is offered, in the  
 Publications, can be had, or sent by post as a single letter, on  
 application to Mr. Bull, Librarian, 15 Holles Street, four doors  
 from Cavendish Square. (See also *The Athenaeum*, Nov. 11th.)

**NEW PUBLICATIONS.**  
 Subscribers to Andrews's Circulating Library are libe-  
 rally supplied with all the New Works (English and Foreign) as  
 soon as published. The Proprietor does not profess any new  
 plan or system of circulation; thirty years' experience having  
 convinced him that he is solely indebted to the extensive and  
 distinguished patronage he enjoys to his liberal and unlimited  
 supply of every new work, and of all the value the New  
 Catalogue, containing all the standard Authors in English,  
 French, and Italian Literature, including all the New Publi-  
 cations to the present day, is just ready, which, with the Terms of  
 Subscription, will be forwarded, on application, to any part of  
 the United Kingdom.  
 Library, 167 New Bond Street.

 John Murray, Albemarle Street.

November 1837.

Nearly ready, with portraits, &c. 4 vols. post 8vo.  
**THE MEMOIRS OF THE LIFE OF WIL-**  
**LIAM WILBERFORCE.**  
 By his Son, ROBERT ISAAC WILBERFORCE, M.A.,  
 Vicar of East Farleigh, late Fellow of Oriel College;  
 and SAMUEL WILBERFORCE, M.A.,  
 Rector of Brightons.

These Memoirs are drawn from a Journal in which, during a  
 period of fifty years, Mr. Wilberforce was accustomed to record his  
 private sentiments and his remarks on the incidents of the day—  
 from his correspondence with his distinguished contemporaries,  
 Mr. Pitt, Lord Grenville, Lord Melville, Mr. Windham, Mr.  
 Canning, Lord Liverpool, Lord Manners, the Emperor Alexan-  
 der, Prince Talleyrand, La Fayette, Henry Bentham, Dr.  
 Currie, Dr. Burch, Bishop Porteus, the Rev. William Mason,  
 Rev. Christ. Wyvill, Dean Milner, the Rev. John Newton, the  
 Rev. John Wesley, John Thornton, Esq., Henry Thornton, Esq.,  
 James Stephen, Esq., William Hay, Esq., Lady Waldegrave, Mrs.  
 Hannah More, as well as with many other Great Persons still living.  
 John Murray, Albemarle Street.

On Tuesday, 26th Dec. Volume the Sixth of  
**THE LIFE OF SIR WALTER SCOTT.**  
 By Mr. LOCKHART.

Robert Cadell, Edinburgh; John Murray, and Whitaker and  
 Co. London.

Of whom may be had,

## HEBREW LITERATURE.

**A GRAMMAR OF THE HEBREW**  
**LANGUAGE.**  
 By MOSES STUART,  
 Associate Professor of Sacred Literature in the Theological  
 Institution at Andover, U.S.  
 Fifth edition, 8vo. boards, 14s.  
 This Hebrew Grammar is considered as the best extant; it has  
 been recommended as such from the chairs of the Regius Pro-  
 fessors both of Hebrew and Divinity, in this University, and Dr. Lee,  
 the Regius Professor at Cambridge, says, "Dr. Stuart's is  
 closely followed by Professor Stuart, in the very excellent Hebrew  
 Grammar which he has published."

II.  
**Hebrew Chrestomathy.** Designed as an In-  
 troduction to a Course of Hebrew Study. By Moses Stuart, An-  
 dover. 8vo. cloth boards, 14s.

III.  
**An Introduction to Writing Hebrew;** con-  
 taining a Series of Progressive Exercises for Translation into  
 Hebrew. With an English-Hebrew Lexicon, and an Appendix  
 on the Pause. From the German of A. E. Schenker, With Re-  
 ferences throughout to the Grammars of Professors Stuart and  
 Lee. 8vo. 8s.

IV.  
**A Manual of Biblical Antiquities.** By John  
 Jahn, D.D., Professor of Biblical Antiquities and Theology in  
 the University of Vienna. Translated, with an Index of Texts  
 illustrated, and many other additions, by Thomas C. Upham.  
 The 2d edition, thoroughly revised and corrected, 8vo. bds. 14s.  
 This work is recommended from the chair of this  
 University, by the late Regius Professors, Van Mildert and Lloyd.  
 It is also recommended by Professor Stuart, of the United States.  
 Oxford: D. A. Talboys, and 113 Fleet Street, London.

London: Longman, Orme, and Co.

In 8 vols. 8vo. price 8s. **ESSAYS AND CORRESPONDENCE,** chiefly on Religious Subjects. By the late JOHN WALKER, Some time a Fellow of Trinity College, Dublin, and a Clergyman. Corrected and prepared for the press, By WILLIAM MURTON. London: Longman, Orme, and Co.

New publication of the **ENCYCLOPÆDIA BRITANNICA,** in Monthly Half Volumes. A Republication of this great National Work, in Monthly Half Volumes, price 12s. each, will be commenced on the 1st of January next.

The high reputation which it has maintained throughout the Six extensive Editions which have already been disposed of, and more especially the peculiar favour with which the present edition, re-modelled in all its arrangements, has been received, render alike unnecessary any detailed explanation of its plan, or commendation of the manner in which it has been executed. A provision of twelve thousand pages of stereotype plates, and of four hundred Engravings on Steel, afford ample security that the publication will proceed with the most rigid punctuality to the completion of the Work.

In Paper, Typography, and beauty of Embellishment, as well as in the Literary value of its contents, the present Edition will be found very far superior to all which have preceded it. The style of Binding will combine elegance with durability, and the convenient intervals at which the parts will appear, recommends the Work in an especial manner to those who wish to combine the advantage of a periodical supply of instructive and interesting reading, with the permanent possession of a great authoritative repository of all the departments of human knowledge. A prospectus of the Work will be found inserted in the leading Magazines and Reviews published during the months of November, December, and January. Adam and Charles Black, Edinburgh; Simpkin and Marshall, Whitaker and Co., and Hamilton, Adams, and Co., London; and John Cumming, Dublin.

In small 8vo. with Six Engravings, price 6s. in handsome embossed binding. **THE JUVENILE FORGET-ME-NOT,** for 1828. London: L. A. Lewis, 15 Fenchurch.

No. 2.—III. Calliopeus. No. 3. Apollo. IV. Circassia.  
(Conclusion.)—V. Guizot.—VI. The British Colonization of New  
Zealand.—VII. The World we Live In. No. 14.—VIII. Augusta  
Victoria.—IX. Solomon's Flights.—X. Justice to Ireland.—XI. The  
Anglo-Burmese War: a Tale of the Fifteenth Century.  
William Blackwood and Co. Edinburgh; and T. Cadell,  
London.

**FINDEN'S TABLEAU;**  
or, Picturesque Scenes, Illustrative of National Character,  
Beauty, and Costume, with large and beautifully engraved  
Plates.  
Edited by MISS MITFORD.  
Author of "Our Village," &c. &c.  
Imperial size, splendidly bound in morocco, 31. 3s.

"Regally gorgeous—the literature is choice in kind. The little  
stories, and especially Miss Mitford's contributions,—"English  
Edith," for instance, with its happy scenes, and the piquant  
"Wager,"—are exactly what light and graceful description  
which is most suitable to such works as the present."—*Tait's  
Magazine*.  
"An Annual of the same class to which the 'Flowers of Lovell-  
ness,' and the 'Gems of Beauty,' belong, and it is superior to  
both in its plan and execution."—*Quarterly*.  
Charles Tilt, Fleet Street.

Price 11. 11s. 6d. tastefully bound,  
**THE AUTHORS OF ENGLAND.**

Fifteen large and beautiful Plates, engraved in the new  
Bauverel Style, with Biographical and Critical Sketches.  
By HENRY P. CHORLEY.  
Author of "Memoirs of Mrs. Hemans," &c. &c.

A few Copies with India Proof, 31. 12s. 6d.  
"The Authors of England" is an Annual of the first magni-  
tude and importance. It is composed of a group of fourteen of  
the most popular writers of poetry and fiction in our own times,  
departed as well as living—each set in a rich frame-work of  
tasteful device. The volume is superbly got up; the embossed  
cover, with its handsome design, is very elegant."—*Quarterly*.  
"This, for the present season, shall be our annual. The plates  
are exquisitely engraved."—*Athenaeum*.  
Charles Tilt, Fleet Street.

Price One Guinea,  
**THE ORIENTAL ANNUAL.**

By the Rev. HOBART LUNTER, B.D.  
With Twenty-two Engravings from Drawings by the late  
William Daniel, R.A.  
Elegantly bound in morocco, large paper, with Proof Plates,  
31. 18s. 6d.

"In point of binding, gilding, and ornament, 'The Oriental  
Annual' has hitherto been gorgeous, while its plates are always  
in a first-rate style, and eminently illustrative of the glorious  
East. The volume now before us, we are inclined to think, excels  
in these particulars."—*Monthly Review*.  
"It is scarcely possible to imagine a more beautiful book: the  
binding is perfect."—*Literary Gazette*.  
Charles Tilt, Fleet Street.

Price 3s. 6d.  
**THE COMIC ALMANACK, for 1838.**

Illustrated with Twelve humorous Plates by George Cruik-  
shank; a Hieroglyphic, and other embellishments, with a great  
variety of amusing matter.  
\*Copies of the Almanacks for former years, neatly bound  
in 2 vols. cloth, price 12s., may still be had.  
Charles Tilt, Fleet Street.

**THE ASIATIC JOURNAL for December**

contains an unusually large portion of intelligence from  
all parts of the East to a very late date, including News from  
the Presidencies, Appointments, Deaths, &c. to a late period in  
September. The Political Intelligence comprises the particulars  
of the Transactions in Oude consequent upon the Death of the  
King, the Incidents of the Revolution in Ava, and the Prospects  
of a War in that Empire; Political Occurrences in Nepal;  
Travels from our Ultra-Gangetic Provinces to the Frontiers of  
China, &c. &c. The Original Papers comprehend the following:  
—Steam Communication with India—An Indian Vision Mo-  
tivated—The Non-Interference System—Settlement on New Zea-  
land—Estimate of the Risk of Life in the Civil Service—An-  
ecdotes of the War with Mysore—Constitution of the Bengal  
Government—Vocal Rocks at Narok—Life of the Fatimita  
Caliph Meer-ul-din-Alah—Mr. Auber's "Rise and Progress of  
the British Power in India." Critical Notices, &c. &c.  
Wm. H. Allen and Co. 7 Leadenhall Street.

In super-royal 4to. containing Thirty Plates, bound in morocco,  
price Two Guineas.

**THE HIMALAYA TOURIST;**

comprising Thirty Views of Scenery in India, principally  
among the Himalaya Mountains; from Drawings on the Spot by  
Lieut. G. F. White, of the 31st Regiment.  
Edited by Miss EMMA ROBERTS.  
From the private Journals of several Gentlemen who have  
kindly placed them at her service.  
"I have beheld nearly all the celebrated scenery of Europe,  
which poets and painters have immortalized, and of which all the  
tourists in the world are enamoured; but I have seen it sur-  
passed in these unfrequented and almost unknown regions."—  
*Captain Skinner's Journal of a Tour in the Himalaya Mountains*.  
Fisher, Son, and Co., London; Cumming, Dublin; and  
Menzies, Edinburgh.

**NEW WORK BY THE AUTHOR OF "THE MORNING  
AND EVENING SACRIFICE."**

Bain; J. Capes; H. G. Bohn; T. Bumpus; R. Mackie; T.  
Gee; J. Maynard; H. Wadsworth; J. and J. Deighton  
Cambridge; Wilson and Sons, York; G. and J. Robinson, Liver-  
pool; A. and C. Black, Stirling, Kenney, and Co., P. Brown,  
and Macdonald and Stewart, Edinburgh.  
Of whom may be had, an 8vo. Edition, complete in One Volume,  
with a Glossary and Portrait, price 14s. boards.

**ENCYCLOPEDIA BRITANNICA.**

A New Publication of this Great National Work, in  
Monthly Half Volumes, price 12s. each, handsomely bound in  
embossed cloth, and lettered in gold, will be commenced on the  
1st of January.  
A. and C. Black, Edinburgh.

**A SPLENDID FAMILY PRESENT.**  
Dedicated to Her Most Gracious Majesty, Queen Victoria.

**THE NEW TESTAMENT;**

Revised Part I. of "The Illustrated Family Bible";  
with copious Marginal References, Notes, and Annotations, and  
a complete Concordance to the Old and New Testaments.  
Price of the small paper edition, in handsome binding, 40 15 0  
Fine edition, large paper, superbly bound in morocco, 1 11 6  
This unique Work will be completed in a style of art superior  
to any edition of the Holy Scriptures that has yet issued from the  
press, forming one of the most useful and most splendid Presents  
that can possibly be selected as a Sacred Token of Remembrance,  
and certainly far more worthy both of the giver and the receiver,  
than any of those ephemeral productions annually published for  
such a purpose.  
London: Published by Smith, Elder, and Co. Cornhill; and sold  
by all respectable Booksellers in the Kingdom.

In duodecimo, price 6s. 6d. boards,  
**THE DOCTRINE OF ELECTION,**

and its Connection with the General Tenor of Christianity,  
illustrated from many parts of Scripture, and especially from the  
Epistle to the Romans.  
By THOMAS ERSKINE, Esq. Advocate,  
Author of "Remarks on the Internal Evidences for the Truth of  
Revealed Religion," &c.  
London: James Duncan, 37 Paternoster Row; W. Innes,  
Edinburgh; and J. A. Begg, Glasgow.

**NEW AND CORRECTED EDITION.**  
New ready, bound in cloth and lettered, price 3s. 6d.

**THE VOYAGES, ADVENTURES, and  
RESCUES, OF CAPTAIN RICHARD FALCONER.**

Sir Walter Scott observes of this interesting work, "Nothing  
ever disturbed my feelings more than when, sitting by the old  
oak table, my aunt, Lady Aestrum, used to read the lamentable  
catastrophe of the ship's departing without Captain Falconer, in  
consequence of the whole party making free with lime-punch on  
the eve of its being launched."  
E. Churton, 36 Holles Street; and all Booksellers.

In 3 vols. 8vo. price 31s. boards.  
**A SECOND COURSE OF SERMONS for  
the YEAR;** containing Two for each Sunday, and One  
for each Holiday; abridged from the most eminent Divines of the  
Established Church; and adapted to the service of the day; in-  
tended for the use of Families and Schools.

By the Rev. J. R. PITMAN, A.M.  
"There is no question which the clergy are more frequently  
asked, and in which they find it more difficult to give a satisfac-  
tory reply, than is—What Hermans would they recommend for the  
use of a private family? We earnestly think that Mr. Pitman's work  
bids fair to supply the deficiency which has been so much re-  
quested."—*Quarterly Theological Review*.  
A Third Edition, revised throughout, of the First Course, is  
just published, same title and price as above.  
James Duncan, 37 Paternoster Row.

## MR. COLBURN'S NEW PUBLICATIONS.

**MEMOIRS OF JOSEPH HOLT,**  
GENERAL OF THE IRISH REBELS IN 1798.

Edited from his original MS. in the possession of Sir William Betham, Ulster King at Arms, Keeper of the Irish Records, &amp;c.

By T. CROFTON GROKER, Esq.

In 2 vols. 8vo. with Portrait. (Just ready.)

**MRS. GORE'S NEW WORK.**

MARY RAYMOND, AND OTHER TALES. 3 vols.

**MISS PARDOE'S CITY OF THE SULTAN.**

A new and revised edition, in 3 vols. post 8vo. with all the Illustrations.

MISS LONDON'S NEW NOVEL.

**ETHEL CHURCHILL; or, THE TWO BRIDES.**

A STORY OF THE REIGN OF GEORGE II. 3 vols.

"Such a record of female sentiment and passion as has hardly been published since the days of Corinne."—*Times*.

STORIES OF SPANISH LIFE.

Edited by Lieutenant-Colonel CRAUFURD, Grenadier Guards.

2 vols. post 8vo.

"These volumes are a welcome and valuable addition to English Literature, giving by far the best view of Spanish Life we have yet met with."—*Spectator*.**THE BENCH AND THE BAR.**

By the Author of "Random Recollections of the Lords and Commons," "The Great Metropolis," &amp;c. 2 vols. post 8vo.

"In these goodly octavos, as in a mirror, the general reader can catch a glimpse of all the leading members of the legal profession. The work is highly interesting, and will circulate extensively among readers of every class. The anecdotes are lively, characteristic, and happily introduced."—*Sun*.**JANE LOMAX;**

Or, A MOTHER'S CRIME. By the Author of "Brambletye House," "Reuben Apsley," &amp;c. 3 vols. (Just ready.)

LONDON, SATURDAY, DECEMBER 9, 1837.

PRICE 8d.  
Stamped Edition, 9d.

## REVIEW OF NEW BOOKS.

*Trelawny of Trelawne; or, the Prophecy: a Legend of Cornwall.* By Mrs. Bray, author of "The White Hoods," &c. 3 vols. 12mo. London, 1837. Longman and Co.

THE West of England is singularly rich in legendary lore, and lore of the most picturesque and romantic character. The Jacobite spirit was there kept alive to the last; while the wild scenery, and the vicinity of the sea, gave their colouring to the traditions which pervade that bold line of coast, and the loveliest valleys in England. The house of Trelawny would seem the especial property of romance; but it has remained for Mrs. Bray to make its archives current coin of the realm; and, no doubt, to be universally circulated. The period of her story is chosen most judiciously; it is laid in the reign of James II.—enough removed from the present to have all the prestige of the past, and yet with opinions and feelings in common with to-day. The work is carried on by means of letters—a style of composition we are old-fashioned enough to like exceedingly. We seem to grow so intimate with the various writers: they place, as it were, a confidence in us, that at once engages us on their side. Moreover, the various styles assist so much in developing the different characters. How marked is the distinction between Rebecca and Letitia Trelawny! The one just a lively, good-humoured girl, full of all pretty vanities, and duly impressed with the importance of the last "French head." The other "a thoughtful apparition sent" to shew us

"How divine a thing a woman may be made."

It is an exquisitely drawn character, full of poetry and grace. In a completely opposite style is Dr. Ruddell, a delightful sketch of learning and simplicity: "a very quaint and kind old man," who is exceedingly surprised that Mrs. Letitia Trelawny, though she has consented to marry Sir Francis did not "yet so immediately bend her mind to keep shape with her purpose, as a young lady so well grounded in the classics, and having also a very pretty knowledge of theology, ought to have done." The Bishop himself is a noble and stately picture, while the eventful period to which he belonged lacks none of its interest in the narrative now before us. The work opens with a very lively and pleasant account of a visit paid to the family seat of the Trelawnys, during which the first idea was suggested, and the materials of the story collected. Thence we take the description.

*The Heroine.*—"But the most interesting pictures in this apartment are two several portraits of 'Mirtilla' (Letitia), the bishop's daughter. Each of these is the size of life. The first represents her when a child, chubby and beautiful. A black boy, with a silver collar round his neck, is seen presenting her with a dove, which appears to startle her by its fluttering. The other portrait of Mirtilla is that of a young and lovely woman of about twenty years old. She is sitting, holding a flower in her hand. The figure slight, but elegant; her eyes are full, dark, and radiant; the features very regular; the form of the face oval; the mouth has in it great sweetness. The

dark-brown hair, in large wavy curls, is tastefully disposed, and by its simplicity harmonises well with the general expression; that of the countenance is very marked, pensive, sedate, reflective, indicating a character where you would expect to find strong feelings, but subject to the perfect control of reason."

*Early Death.*—"It is at all times full of awe; but when the friend cut down is young—in the very dawn or morning of life, it carries with it something of that feeling of disappointment, which irritates our regrets by our thinking what the deceased might have been had he been spared. The old, when they die, have run their course; their work is done; their cup of good or of evil has been filled and emptied; their whole history is known, and nothing remained for hope had they been spared. But in an early death, so much is left for the imagination; and we picture to ourselves what the young would have been had he not died; and we decorate his image with all the flowers of hope, which are ever of the fairest and the best when they are scattered by the hand of affection."

*A Funeral Service.*—"My lord, that was a sad morning, at the ancient house of your lordship's forefathers, when the poor remains of this sweet child were taken forth to the burial. Mr. Harry Trelawny, being your lordship's own nephew, and the eldest male of the family then present, was chief mourner; and the ladies of the family, who all attended, chose to be the close mourners. These, therefore, had the rosemary. As the custom has it, they, with the chief mourner sitting at the head of the corpse, were shut up in a room hung with black for more than an hour. The coffin stood on tressels. As the deceased was young and single, the ladies and gentlemen wore white scarfs and gloves; and the books given away as the dole gifts were tied with white ribands; each book had silver clasps. The deceased had himself ordered that the dole books chosen for this occasion should be copies of the 'Holy Dying,' or of the 'Golden Grove;' and all his orders and wishes were punctually fulfilled. The grave garland\* was, as is usual in the West of England, made to be carried to the church by the chief female close mourner, who is always chosen among the virgins of the deceased's kin, if he be young and single; thus prettily prefiguring the innocent estate of him who goes down, like an April flower, to the tomb. Your lordship's beloved child, and my most rare and dear pupil, Miss Letitia Trelawny, was chosen garland-maid on this sad occasion. She had woven the chaplet with her own fair hands; and laurel, myrtle, bay, and rosemary, with many a rose and other sweet-smelling flowers, were there interwoven with that delicate art which shews how sweetly Feeling can dress itself and its images in all things, and can make the very flowers of the field to speak their pretty lessons of morality. The mourners rose as I entered the room, dressed in my surprise, and ready to lead on to the ceremony. All rose but Mr. Harry Trelawny, who, as chief mourner, stirred not till

\* "These curious forms and customs, so circumstantially described by the good doctor, are now quite obsolete in Cornwall."

the bearers lifted the corpse, before which he immediately placed himself, and so was to walk in the procession. Miss Letitia Trelawny, in her black dress, with the white scarf floating over it, looked very lovely: she took up the garland that was laid at the head of the coffin, and sighed deeply. Your lordship knows how full of reflection is her truly sedate mind; rich in matter, and ever ready to bring forth some of its stores on occasions the most happy and fit for their exercise. She could not lift the garland without giving vent to some apposite expressions of her mind; and in her poetic way, for her feelings constantly connect themselves with the poetry of things, she opened a page in the 'Holy Dying,' a copy of which was her dole gift, and, looking sadly on the coffin, she said,—'Poor Charles! so young, so early lost!' And then she read aloud from her book,—'But so I have seen a rose newly springing from the clefts of its hood, and at first it was fair as the morning, and full with the dew of heaven, as a lamb's fleece; but when a rude breath had forced open its virgin modesty, and dismantled its too youthful and unripe retirements, it began to put on darkness, and to decline to softness and the symptoms of a sickly age: it bowed the head and broke its stalk; and at night, having lost some of its leaves, and all its beauty, it fell into the portion of weeds and dust.'"

*A Landscape.*—"The peculiar scene which presents itself on descending the steep, winding, precipitous track that leads down into Polperro) was, on this evening, more impressive than I have ever before seen it. The sun was on the decline; and as his beams seemed to send darts of fire against those stupendous fortifications which nature herself has here raised to render impregnable this iron-bound coast, their gigantic forms rose sublime, and shewed, in the most distinct manner, the bold outline of every cliff, turreted with crags and broken rocks. In those wild summits the winds and the storms might be fancied to make their abode, till they rushed forth, and called up their tributary hosts, in those high and crested waves, which here so often deluge the shore, together with the poor fishers' huts, as they roll on covered with foam, and beat against the rocks, that reverberate the voice of their complaints. To the right, immediately behind the very loftiest chain of cliffs, hung a mass of black clouds that seemed for awhile motionless in the heavens, whilst far removed beyond these, lay a second and more varied combination of vapours, that looked like a walled city with towers and castles, here and there partially gilded by the lurid rays of that sun, which appeared as a conqueror to give them light, or to consign them to darkness, as he alternately triumphed or declined. The ocean (which seen from the beginning of this descent, presents a horizon of such extraordinary height, that, according to Dr. Ruddell's standing remark, the waves appear to be going up hill), was now only partially illumined, and that in long gleams by the setting sun; and where these gleams fell, they shewed breakers covered with white foam, that came rolling and boiling over the reef—the reef that lies near that most wild and beautiful combination of rock, which,

starting abruptly from the sea, near the entrance to the little harbour, presents summits as sharp as the heads of so many spears; and on this account I always used to call them the spikes. The spikes, then, were at this moment strongly illuminated, whilst the miserable huts that form the little hamlet of Polperro lay in gloom, as the immense black curtain that had, but a minute before, appeared to hang still as a pall of death in the sky, unfurled and unfolded, and gradually spread itself over the face of the heavens, towards the north-east. The seamews, here so abundant, were with clamour and cry winging their way to the land, and seeking their nests for shelter amid crag and cliff, whilst, by another of those changes of the sky, which at such an hour seem like the work of the weird's wand, the black mass became streaked and edged with hues of the deepest purple, and gleams of fiery red. These were more than signs of an approaching storm; for the sea rolled with tremendous waves towards the shore, and the wind began to howl and to moan in a manner so dismal, that it might, to the ear of fancy, sound as the anthem of some water spirit, who rejoices for the destruction he is that night doomed to accomplish on the mighty element, over which he has the power to exert his unpitied rule."

We will not break in upon the mystery of a story whose interest is well kept up to the last; but, whether for narrative or character, we cannot but consider *Trelawny of Trelawne*, the very best of Mrs. Bray's numerous and standard works.

*Views in India, chiefly in the Himalaya Mountains.* Drawn from Nature by Lieutenant G. F. White, 31st Regiment. Edited by Emma Roberts. 4to. pp. 84. London and Paris, 1837. Fisher and Co.

UPON these engravings, thirty in number, and comprehending some of the most splendid mountain scenery in the world, the publishers state, in a prefix, that they have expended no less a sum than 2400*l.*; and we can well believe it, for their fidelity, their picturesque beauty, their magnificence, are so perfectly preserved, that the spectator seems, when he has closed the volume, to have traversed these "wonders of Ind," from the Ganges to the Jumna, and visited the sacred sources of those mighty streams. There are the natives basking on the sunny banks, whilst sumptuous fairy-looking vessels navigate the flood; there are the fortress-crowned hills and the warrior encampment below, with its coursers, its camels, and its elephants; there is the fakier's fane and the simple Hindu at worship; there are the extraordinary trees of the eastern clime — almost a forest in a single tree; there is the frightful pass, and yonder the terrific alps which seem to frown a sterner prohibition on the mortal who would dare to enter; there is the temple, there the Ghaut, there the cavalcade, the cupolaed city, the extended plain, the bridge of swinging rope, the heights of everlasting snow, the stupendous waterfall — in short, there is every form and variety of oriental nature embodied by art, and made distinctly and beautifully obvious to the European sense.

Turning to the letter-press description, we have hardly less reason to be pleased. Of the vast Himalaya chain:—

*Feet.*  
 "Dhawalagiri, or, the White Mountains; above the level of the sea ..... 27,000  
 Nunda Debee, one of the Juwahir cluster of peaks, and No. 14, A 2, of Hodson and Herbert's survey 25,741  
 Setghur, properly Swetaghur, or the White Tower north of Nepal ..... 25,261,

*Feet.*  
 A mountain, supposed to be Dhaibau, above Catmandoo 20,140 feet; above the sea ..... 24,768  
 A mountain, not named, observed from Catmandoo, in the direction of Calia-Bhairava, 20,000 feet above the valley of Nepal, and above the level of the sea ..... 24,625  
 Another near to it, 18,662 feet above the Nepal valley; above the level of the sea ..... 23,261  
 A third in the vicinity, 18,451 ditto; ditto ..... 23,052  
 Two peaks, named St. George and St. Patrick, situated at the head of the Bhagruttee, or true Ganges; calculated, in Hodson and Herbert's survey—the first at ..... 22,654  
 —the last at ..... 22,796

The two peaks of the Roodroo Himala, north-east of the Ganges, 23,390, and ..... 22,906  
 Peaks of the Jumnotree, or Bunderpooch Mountains (giving rise to the Jumna, the Tonse, and the Beral Gunga), varying in elevation from 20,123 to ..... 21,155

Also, upwards of fifty inferior peaks, lying between lon. 78° and 80° east, varying from 18 to ..... 20,000

"In clear weather, the most lofty of these mountains in the direction of Catmandoo in Nepal, may be seen from Patna, at the distance of 160 geographical miles; while, in some places—Purneah and Rejmhal, for instance—they are visible at a still more extraordinary distance, 232 English miles: a circumstance which, according to the calculation of Mr. Colebrooke, establishes their height to be at least 28,000 feet, since nothing less would render them barely discernible at that distance in the mean state of the atmosphere; although, under circumstances of extraordinary refraction, a lower altitude would produce the same effect.

"The present series of views belong to the scenery which occurs in that portion of the Himalayan regions lying between the rivers Sutlej and Kelee, having for its boundary on the north and north-east the snowy chain of the Himalaya, and, to the south and southwest, the plains of Hindostan. Within this tract of country are comprised the provinces of Sirmoor, Gurwall, and Kumaon, besides several other inferior states, the whole of which are either annexed to the British possessions, or have become allies or tributaries to that government."

The accounts of every separate part illustrated are extremely spirited and interesting. We shall endeavour to extract a few examples. Janghera, on the Ganges, "is supposed, in former times, to have been united by an isthmus to the shore; but the rapid river continually rolling down, has worn a passage for itself between, and the rock is now completely isolated. This place has been considered, during many ages, to be particularly holy; and, accordingly, from time immemorial fakiers have established themselves upon it, deriving a considerable revenue from the donations of the pious voyagers of the river. A ghaut, or landing-place, has been constructed at the back of this rock; and rude stairs conduct the pilgrims who are desirous to perform their pilgrims at the hallowed shrine, to the pagoda at the summit dedicated to Naryan, who figures as the principal deity of the place. There is an idol of him in the temple that crowns this beautiful pile, and his image, together with those of Vishnu, Seva, and others, is carved in different parts of the rock. The leading fakier preserves a dignified seclusion, and is to be seen as silent and as motionless as the idol himself, seated on a tiger skin, and unencumbered with any covering except the chalk and ashes with which he is plentifully bedaubed: he has, however, more active followers in his train, who are at the trouble of collecting the tribute which he endeavours to exact from all the passers-by, whatever their religious persuasion may be. These fellows push out from the rock whenever the state of the water will permit, and

follow the voyagers with their importunities. But when the river is full, and the current, strengthened by the melting of the snow, comes down in one sweeping flood, there is no loitering under the rock of Janghera; and a vessel sailing up with a strong wind against this tide, makes rather a perilous navigation as it stems the rapid waters. In going down the Ganges at such a period, we pass the rock like an arrow shot from a bow, only catching a transient glance of its picturesque beauty; but when the river is low, and the current flows gently, we may pause to view it at our leisure, many persons landing to pay a visit to the grim occupant of the pagoda.

"Veins of coals have been discovered, a circumstance of great importance since the introduction of steam navigation upon the Ganges. At present, the exceeding unhealthiness of the climate of these fastnesses—for such the hilly districts in this neighbourhood may be deemed—proves a great barrier to research. Cutting roads through them, and the attempt to bring them into cultivation, we may hope, will lead to improvements which will enable the scientific traveller to penetrate their recesses, and pursue in their own haunts his studies of the animal creation, hitherto existing in profound solitude scarcely trodden by the foot of man. The ornithologist has found a considerable accession to the catalogue of birds: a splendid animal of the bovine genus, the gaour, feeds in the valleys, and the hippopotamus is supposed to inhabit the lonely rivers of Gundwana; the gaour differing considerably from the bison, or any other known specimen of the class, is altogether new in the records of zoology, and prevailing opinion confines the hippopotamus to Africa: it is, therefore, a matter of some importance to establish the existence of the one, and to render the other useful in a domestic capacity. Specimens of the gaour have found their way to the general mart in India, the fair at Hurdwar, but the attempts hitherto made to tame this fine animal have proved unsuccessful: those individuals that have been exhibited measured upwards of sixteen hands in height. The gaour somewhat resembles the buffalo in form, but has a much finer coat; it is distinguished by an excrescence running down the back, which by casual observers has been mistaken for the hump found in the common Indian bullock; and its appearance is so rare as to excite great curiosity among the native community, who crowd eagerly to gaze upon it when taking its place among the curiosities of Hurdwar."

Of Runjeet Singh the history is very curious; and especially of his obtaining the famous diamond *Kohi Noor*, or mountain of light, the gem of Cabul and Cashmere.

"Runjeet Singh, though owing the greater portion of his acquisitions to craft of the lowest kind, and of the most unjustifiable nature, is possessed of talents of no common order, which, if properly cultivated, would have secured for him an ascendancy based upon a more honourable foundation; but, with too many of the vices of the Asiatic character, he has also a very large proportion of those ridiculous notions which are obsolete in countries illuminated by the light of science. The Seik ruler is a great believer in omens, and not only consults the stars, but also the chirpings of birds, previous to any measure of importance. He has lately suffered from ill health, but the remedies prescribed by European physicians have been neglected for the advice of soothsayers. These personages took upon themselves to discover the cause of the malady of the sovereign, which some old beggar-woman had naturally enough

attributed to the oppression of his people. Upon consulting the stars, they found Saturn in the ascendant; a planet which, according to general belief, always exerts a baleful influence. There was no difficulty now in tracing the liver complaint and dysentery of the lion of the Punjab to its true source; but what was to be done in such an emergency? the dislodgment of a planet from the sky being beyond the power of the maha-rajah, great as he undoubtedly is. Nevertheless, it was necessary to hit upon some method to get rid of the malignant influence, and it was determined to transport the planet in effigy out of the Seik dominions into the British territory, in the expectation that, on its arrival on the coast, the governor-general would evince his friendship by transporting Saturn beyond the kalapance, or salt ocean. The credit of this ingenious device is due to Mudhsoodun Pundit, and other learned men, who, according to the statement in the Lahore ukhbars, recommended his highness to cause an effigy of the planet Saturn to be made of gold, set with sapphires, and to give the same, with a black shawl, to a brahmin of some other country, who should be placed in a rath, or car, of a dark colour, drawn by buffaloes instead of bullocks, and transported along with the image across the river; when, with the blessing of Providence, the maha-rajah would speedily recover. This notable expedient was instantly adopted, and a golden effigy of the planet speedily constructed. When it was finished, a brahmin of the Chobal class, a native of Mutha, was found to undertake this novel charge; who, after being bathed in oil, and his person blackened from head to foot, was clad in sable garments: when the effigy in question, with a pair of gold bracelets, five hundred rupees in cash, and a black horse with a black saddle, were given, according to the rite called *Sung-klus*. After being placed in a covered rath, drawn by a pair of buffaloes, the brahmin, accompanied by two battalions of soldiers, was ordered to be carried across the river. It is needless to add, that the instant that Saturn left Lahore, the maha-rajah nearly recovered: the further progress of the planet was not stated, but it was supposed that his highness would be quite well before it reached Loodianah. Runjeet Singh entertains crowds of dancing-girls at his court, and has, in his old age, scandalised the more fastidious portion of the community, by raising one of these ladies to the throne. The celebrated dancer, Goolbahar, having frequently attracted the attention of her lord, at length obtained sufficient influence over him to induce him to make her his wife. The marriage was solemnised with all the pomp and splendour consistent with the rank and dignity of the bridegroom, made happy in the possession of a beauty whose charms are stated to be transcendent. It is said that no report can possibly exaggerate the attractions of the lady, whose loveliness far surpasses any idea that can be formed of it. Not content with the usual number of female attendants, Runjeet Singh has a band of amazons, armed and equipped as a guard to the Zenana. These women are splendidly dressed, and many are said to be very handsome, and great favourites of their sovereign.

The following is a lively picture:—

“It is difficult to afford any idea of the grandeur and beauty of the inanimate objects which render Hurdwar one of the places best worthy of a traveller's attention in India, but still more so to convey even a faint notion of the swarms of living creatures, men and beasts of every description, which occupy every foot of

ground during the time of the fair; multitudes of cows, horses, bullocks, camels, elephants, ponies, and mules from Osbeck Tartary to Benares, are crowded together, rendering the scene in the highest degree animated and interesting: every thing is to be found at the fair, though horses form its principal attraction. The horse merchants from Bokhara and Cabool occupy the stony central parts of the river; while those from Turkistan take up their quarters in small enclosures behind the houses of the town. These men are famed for their ponies and galloways, animals of great power, called *Toorkies*, some of which bear very high prices. The elephant dealers incline to Khunkul, for the sake of fodder, but traverse the roads of the fair with their studs during the mornings and evenings, each elephant bearing a large bell attached to the neck, for the purpose of giving warning to passengers of their approach. The bunnas, or grain-sellers, *hulwāes*, or confectioners, cloth, shawl, and toy-merchants, occupy the road-side close to the town, their dwelling-places being interspersed with small enclosures containing piles of barley and straw, heaped up, and ready for sale. On the sides of the hill to the west, thousands of Seik families are to be seen, with their huts, tents, camels, bullocks, mules, and horses, thrown together, as it were, without order or method. Then come the tents of the better order of visitors, formed into groups of two or three, and constructed of white or striped canvass, gaily fringed, and ornamented with scalloped borderings of scarlet cloth. Then, again, are the tents of the superior horse-dealers, Arab or Persian merchants, who have brought splendid animals of the purest breed, for which they demand enormous prices; men, also, with bears, leopards, tigers, deer of all kinds, monkeys, Persian greyhounds, beautiful cats, and rare birds, for sale. Then there are heaps of *assafoetida*, in bags, from the mountains beyond Cabool; sacks of raisins of various kinds; pistachio-nuts, almonds, and boxes of preserved apricots; and stalls filled with merchandise of every description, brazen vessels of all kinds, bead-necklaces of many colours, rosaries, mouth-pieces for pipes, of agate, cornelian, lapis-lazuli, and different kinds of marble, pearls, black and white chowries, or implements for keeping off flies, formed of the long bushy tail of the yak, the cow of Thibet; stones, for seals, of all descriptions; bangles, bracelets, armlets, and ornaments for the ankles, of silver or pewter; sable, tiger, leopard, ounce, and other skins; stuffed birds, the Argus-eyed, golden, and other varieties of pheasant; idols of all kinds, together with their brazen stands; real and mock coral; garlands and necklaces of tinsel; looking-glasses framed in ivory, with mosaic work in imitation of fruits and flowers, from Delhi; richly embroidered scarfs, skull-caps, and slippers; toys executed in mother-of-pearl; bales of shawls, and jewels of high prices; broad cloth, stationery, and cutlery, from England; perfumes from Paris, Eau de Cologne, and many other articles too tedious to mention. The crowd and confusion of buyers and sellers, the native groups in every imaginable costume, some shining in cloth of gold, and surrounded by followers splendidly arrayed, others less expensively but picturesquely dressed, and many half-naked, or wildly clad, all mixed up with priests, soldiers, and religious mendicants, half beggar, half bandit, with here and there a cluster of Europeans mounted upon elephants, exhibit altogether a concourse which no other

place in the world can shew. The noise baffles all description; the shouts and cries of men come mingled with the neighing of horses, the trumpeting of elephants, the grunts of camels, the lowing of cattle, the bellowing of bulls, the screams of birds, and the loud sharp roars of the wild beasts; and, as if these were not enough, there are gongs and drums beating, trumpets blaring, conch-shells blowing, and bells ringing, which never cease for a single instant.”

These selections will afford some notion of the vivid manner in which the pencil is aided by the pen in this splendid volume; but, as we hope to return to it, we shall, for the present, trespass no further on its interesting pages.

*Sporting.* Embellished by large Engravings and Vignettes, illustrative of Field Sports, from Pictures painted by T. Gainsborough, R.A., E. Landseer, R.A., A. Cooper, R.A., Charles Hancock, J. F. Lewis, W. Barraud, &c. Edited by Nimrod. With Literary Contributions by Thomas Hood, Esq., John Hamilton Reynolds, Esq., the Author of “The Oakleigh Shooting Code,” the Author of “Wild Sports in the West,” the Author of “The Sportsman's Cyclopædia,” &c. 4to. pp. 144. London, 1838. Baily and Co.

MR. APPERLEY (for Nimrod's real name is now so well known that any attempt to conceal it would be sheer affectation) is, in our opinion, perfectly justified in saying, in his very able Introduction to this splendid volume, “I cannot help flattering myself, a work is here produced which must please all.” To the sportsman it will, of course, be pre-eminently interesting; but every lover of nature—and who that has an eye to see, an ear to hear, and a heart to feel, is not a lover of nature?—must also be delighted with it. There is a vigour, a freshness, a truth, a pleasantry in its pages, almost as exhilarating as are the sports which they describe; and we recommend their perusal equally to those who like to be reminded of the enjoyments they have themselves experienced, and to those less fortunate persons, “in populous cities pent,” who wish to obtain some notion of what those enjoyments are. The distinct topics are above thirty in number, more or less technical, but all bearing upon the great subject which they are intended to illustrate. One agreeable circumstance about them is, that they have no necessary dependance upon one another; so that the reader may open the volume at hazard, with the certainty of being amused, and of not being called upon for any long-continued and exhausting effort of attention and patience. The following extract from the description of “Going to cover,” by Nimrod himself, shews at once the experienced fox-hunter, and the pleasing writer.

“Few packs of fox-hounds now meet before half-past ten, and several not before eleven o'clock. These late periods of the day would be ridiculed by our forefathers, could they arise from their graves and witness them; but the present protracted hour of dining, and, consequently, of retiring to rest, renders them almost necessary—at all events they are essential to comfort. The sportsman has now time to get his breakfast at his leisure, instead of, as formerly, either going without it, or swallowing it in half an hour after he awoke; and, unless they are very late risers, he can generally enjoy this cheerful repast with his family. Having the meets of all the neighbouring packs to choose from, he fixes upon the one

most likely to produce a run; and having also fixed over night, with his groom, what horses he will ride, or rather been told over night by his groom what horses 'he had better ride,' they proceed to the place of meeting, at the rate of about five miles in the hour; one of them mounted by a light boy, who is to bring back his master's hack, or return in the rumble of his carriage; the other, by a good and experienced horseman, and one who knows the country well, who is to ride his master's 'second horse,' as he is called. The usual proceedings with the hounds are these:—On the previous day the pack is selected or 'drawn,' as the sporting term is, and being fed not later than mid-day, have nothing more to eat until they return from hunting on the succeeding day. It averages from sixteen to twenty couples, but hardly ever goes beyond the latter number, as, from the present style of riding in the field, there is considerable danger to hounds of being ridden over and trampled upon; and it is, therefore, the huntsman's object to take out no more than he thinks necessary, and to select such as he knows are likely to run well together. About half an hour before the time for starting arrives, he walks into his kennel, and examines the lot he has fixed on for the day; and finding them all right, he returns for the purpose of procuring his horse, and making other arrangements for his start. Being mounted, we have him at the kennel door, with his two whippers-in in the rear. He is generally a man in what may be called the meridian of life, of rather a grave aspect, but with an intelligent countenance, and often a very penetrating eye—the *tout ensemble* conveying an impression of knowledge founded upon experience. He has also the appearance of robust health, and is cast in a mould of the right form to stand work. In fact, he must be sound, and especially as regards his lungs, which should be equal to those of a Stentor. Still, there should be music in his pipe, that is to say, his 'view holloa' should be shrill, and capable of being heard at a very considerable distance; and from the strength it acquires by exercise, it is heard, down wind, as the term is, at the extent of a mile at least. The best and clearest I ever heard, was that of Will Barrow, so many years huntsman to the late Mr. Corbet, who hunted Warwickshire. The whippers-in are equally important, in their situation, with the huntsmen.—Mr. Beckford, indeed, thought more so. At all events, in his own country, which abounded in riot, he preferred, he said, an excellent whipper-in to an excellent huntsman. They should be light men, not too young, with a quick eye, and still quicker ear; and they should be, which, in fact, they generally are, fond of the sport, or they seldom succeed in their profession, and become huntsmen. Again, a whipper-in should not only be a bold horseman, but he should excel in the use of his bridle-hand; for if he do not, from being so often obliged to follow a hound in the middle of a field, to flog and rate him,—the hound, of course, turning and twisting about to avoid him—he would ruin the mouths of his horses. It is, however, not only extraordinary how quickly some of the *élite* of this genus will get a blow at a hound, in spite of his caution in attempting to save himself, but likewise, how an old hunter, that has been long ridden by a whipper-in, will himself turn after a hound, to enable his rider to get a cut at him. I am happy, however, to observe, that there is not now a tittle of the punishment administered to hounds that there was in my younger days, when it was occasionally a practice to tie them,

in a pair of couples, to a gate, and have them flogged, often by both whippers-in at once, for the space of from five to ten minutes at a time. Several causes have operated in their favour here. First, the practice of entering hounds to a scent they are not intended to continue to hunt, is exploded; secondly, hares are now so plentiful in all hunting countries, and hounds walked through them so much in the summer, that they care little about them; and lastly, the greater number of hounds now bred, over that which was formerly bred, admits of more liberal drafting, by which those likely to be incorrigible are put out of the way at once, instead of being attempted to be cured of their evil ways by the lash. It is the duty of the first whipper-in to go well away with the tail hounds, when they break cover, so as to be ready to get to the head of those that are leading, in case his huntsman finds it necessary to have them stopped or turned. And here is an opportunity for a fine display of his art, as well as shewing to the field that he has exercised it with judgment towards the pack; for it is a beautiful sight, when a whipper-in gets quickly before his hounds in chase, and stops them with a few rates, and still fewer smacks of his whip. The second whip need not be so forward: he has not only to see that all the pack have quitted the cover in which the fox has been found; but, by being in the rear, he has frequent opportunities of viewing a short running fox, keeping him off his foil, or trying to force him from his point, if that point be a bad one. The door being opened, the hounds rush out in full cry, but which is soon checked by the whips; and a silent joy is expressed by the flourishing of their sterna, slight whimpers, and looks which cannot be mistaken. Their travelling pace is about five miles in the hour, which keeps them in a kind of jog-trot; and, as may be supposed, what are called 'bridle roads' through fields are preferred to those which are stoned and hard, out of regard to their feet. When the high road is taken, through necessity, they are encouraged to travel on the foot-paths; which the words, 'get over, hounds,' with a slight inclination of the hand and arm, instantly causes them to do. Still there is a peculiarity in the style and manner of hounds, when on their road to cover. Some carry both head and stern up; others, both down. Some like to go a-head; and, were they not looked to, would travel a little out of their way, if they thought they could get any thing good by so doing; whereas others jog quietly on, as if thinking about what they are going to do; and a few have a *penchant* for following close to the huntsman's horse's heels. On their return home, also, they exhibit various traits; and there is scarcely a pack in which one hound is not noted for bringing home some trophy of the day,—the head of the fox, the most common one. But I must not pass over the horses without a few words. The one the huntsman rides is, of course, the best, as his presence with the pack is at all times required, which is not the case with the whips. He is generally an animal of power, more than equal to the weight of his rider; and like him, is also in the meridian of life. Although his legs may be both bunged and blighted, and bearing marks of the firing-irons, he is still sound and firm upon them; and there is a placid and somewhat intelligent look about him, which shews that he has profited by his years, and the experience he has had in the field. He is much attached to the hounds,—unhappy when they are out of his sight; and would not put his foot upon one of them for the best feed of oats

you could give him. He is, of course, an accomplished fencer; has given many proofs of his bottom; and his temper is so fine that nothing can well disturb it. As for the cry of hounds, and the twang of the horn, he heeds them not; nevertheless, he has no objection to a blank day, which I think he would tell us, if he could speak. The horses of the whippers-in are, for the most part, of rather inferior description in their appearance. They are not generally horses of much power, but almost always well-bred and fast, to enable them to catch hounds, when left behind, as they so often are, in covers. Sometimes we see the second whip on what is called 'a promising young one'—that is, a good-looking five-year-old, which his master may have either bred or purchased; and which, after being initiated to all sorts of fences, by the young and strong nerve of an aspiring whipper-in, may one day or another become a valuable addition to his own stud. But it is scarcely fair to make a whipper-in a maker of hunters. A good leaper is at times absolutely necessary to him; although at others, when only bringing up tail-hounds, the fences may be ready crushed to his hand. Ask Jack Stevens, whether or not a whipper-in should ride a good fencer? and he will answer you, 'By all means.' He will tell you how many thousand times 'the squire' has exclaimed, 'Get to 'em, Jack, and turn 'em; what the d—l are you about?'—with a thick bulfinch-fence and, perhaps, a yawning ditch, or an ox-fence, staring him in the face; and this with all the disadvantage, in addition to the absence of excitement, of that slackness a horse exhibits when his head is turned away from the crowd. Arrived at the place of meeting, the huntsman—unless in case of strong wind or bad weather—selects an open space, where he waits with his hounds until his master arrives, and the stated hour is up; but which is generally exceeded by a few minutes, the delay arising, perhaps, from the non-arrival of some influential person in the hunt. There is, however, little excuse for any man being now many minutes behind his time, at the cover-side, as few hounds throw off much before eleven, and some even after that hour; but the late Mr. Meynell obtained for himself great popularity by waiting half-an-hour, now and then, for some sporting graziers, whose horses he saw in the field, but which graziers, he knew, were obliged to attend that morning at some fair in the neighbourhood of the hunt. That excellent master of hounds was well aware of the necessity of conciliating this respectable and influential class of persons, whose services are essential to the preservation of foxes and sport."

Our worthy and entertaining friend Hood's peculiar and exhaustless talent is exhibited to great advantage in "The Praise of Fishing, an Extravaganza," from which we transcribe the following passages:—

"Of all the sports ever sported, commend me to angling. It is the 'wisest, virtuous, discreetest, best;'—the safest, cheapest, and, in all likelihood, the oldest of pastimes. It is a one-handed game that would have suited Adam himself; it was the only one with which Noah could have amused himself in the Ark. Hunting and shooting came in second and third. The common phrase of 'fish, flesh, and fowl,' hints clearly at this order of precedence. The savages follow the course laid down; they all begin in the fishing line,—a line of country comes afterwards. The Islanders, especially, were found to have more than a super-fishal knowledge of the art,—they made very service-

able lines of twisted grass, and as respectable sneek-bends of fishes' teeth and mother-of-pearl, though they had the sense to prefer our English fabric. The New Zealanders positively persecuted their white visitors with the everlasting cry from man, woman, and child, of 'Tippus akirly! Tippus akirly!' i. e. give us a hook. The same natives, however, as we are informed by the journalist of the voyage, ran away like mad from a horse or a gun. It is as plain, then, as a pike-staff, which ought to be some sort of trolling-rod, that if we were to ask Necessity, the Mother of Invention, she would say, 'This is my eldest daughter, sir,' of fishing. To refer to my own experience, I certainly became acquainted with the angling-rod next after the birchen one, and long before I had any practical knowledge of Nimrod or Ramrod. The very first time I was lost I turned up at Sadler's Wells; on the second occasion I had drifted by Leaway to Lea Bridge; and the third time of my being 'tint,' as the goblin page calls it, I was aqua-tinted at the London Docks, after smelts. All my earliest speculations had 'an ancient and fish-like smell.' I always imagined, till I was thirteen, that the monument on Fish Street Hill was Izaak Walton's. My original notion of the chief end of string was, that it was to be tied to a crooked pin; and I perfectly recollect a ridiculous fancy of mine when I first saw a rope-walk, with a man stepping backwards, and spinning the tow, as it were, out of his stomach, that he was making a gut line. The truth is, angling comes more by nature. It is in the system, as the doctors say. Plenty of children are born with water in the head; but who ever heard of a boy coming into the world with gunpowder on the brain, or tops and leathers on his legs? The ancients, indeed, who knew a thing or two about nativities, have given a strong opinion on the subject by assigning two signs, Aquarius and Pisces, to the fisherman, and giving only one—that half horse, half Robin Hood—Sagittarius, to hunting and shooting, like a split vote, between them. So much for the antiquity of the sport. As to its morals, what field pastime can shew such a written character from its master as the favourite pursuit of Cotton's 'Father?' It is inoffensive, sober, and honest. Without fishing for a compliment from Mr. Buckingham, I must remark that the angler eminently inclines to temperance principles, for while at work he never takes any thing without water; and should he afterwards indulge in a little of something neat, he has the peculiar excuse of the chilly temperature of Bleak Hall. In fact, it is on record in 'Salomon's,' and the story ought to be made into a tract, that four fishermen, after a long day in the shrewd keen air of the Scotch mountains, were contented to wash down their dinner with a pint of claret per man. A quartet of gunners would hardly have stopped at such a half measure, but would have charged oftener, and gone more up to the muzzle, with a potato more potent in the country of Farintosh and Glenlivet. Perhaps they would not have considered it out of character to finish off the day's sport by shooting the cat. As for the fox-hunter, he is notoriously apt, whatever pack he may meet with, to find himself in the Vine country in the end. A well-known pen has thrown a purple light on the festivities at certain fox dinners, where a brilliant run with the hounds led to a very fast thing with the de-canter. And, truly, your 'cramming, ramming, jamming cove,' after cramming with venison, ramming with beef, and jamming with pastry, is the very man to go from the Mutton

Cove to the Cove of Cork, and set in for a pouring wet night. There are other little faults, besides checks, about hunting, which cannot be set down to Piscator, in a true bill. For instance, no indignant Diana rushes out shouting 'Horsegomerall!' and accuses him of breaking her pales; on the contrary, the pails of pretty Madge are offered to him for a drink of new milk, and she is even so convinced of his gentleness and other good qualities, that she invites him, in a song, to live with her and be her love. He is too honest to take a fence that is not his own, and too humane to trample on any body's corn. Neither is he obnoxious to the charge of hitting foul, which is brought now and then against the fowling-piece. A comrade never suffers from the shot of the line, as he does from the line of the shot. Piscator is not apt, like Venator and some rash masters, to miss something, and give John a discharge on the spot. He never allows pass a hare-breadth escape at the expense of poor Ponto: or seasons a friend's hat into a pepper-castor. Then there is no incendiarism about him. No puzzling cases of spontaneous combustion occur in his track; for he does not 'throw about fire,' as Dr. Watts sings, 'and say it was only in sport.' You do not hear of his warming a barn, as ladies do their dresses, with a little wadding: or of his obliging a farmer's family to begin fires, towards winter, in the rick-yard. With as many gunners as anglers in its vicinity, the Thatched House, at Islington, would have been, years ago, in a blaze. But there is not any thing about Piscator to make him commonly hazardous; he has not even a fire-fly amongst his flies, or a glow-worm amongst his worms. If he occasionally gets warned off at Waltham Abbey, it is not on account of the powder mills—although Salter says of the London angler, 'as he uses the finest tackle he is obliged to strike light.' Shooting, again, is a noisy affair; a rattling, popping, cracking, banging business; whereas the fisherman disturbs nobody—not even Echo. Silence gives consent to the gentle art, and Zimmermann himself would scarcely have objected to Piscator's company. He is fit to live at Tottenham, amongst the Friends;—a Quaker, indeed, might indulge, without inconsistency, in some of the stiller kinds of angling. It is a sport that might be practised in the cistern of a sick house! 'All Pleasant Place' never complains of it before a magistrate for shattering nerves and glass by sending number six into number seven. Nor is the most delicate female thrown into a shiver of apprehension at the mere sight of its tackle. The shooter, with his 'horrid musketry,' is sometimes the very reverse of a real blessing to mothers: but what bereaved parent ever had to reproach Piscator all her life with leaving his rod about, in children's reach, without even taking the cap off his float! The ruttling of the family empties his kettle over itself without scalding a hair off its head; and if the father himself sits down on a hook, it only reminds him of the many good points about the fisherman! Then, for safety, he is as safe as a safety coach without horses—as harmless to himself as to his neighbour. The shooter will so far mistake his interest as to surcharge his own gun, and a hand or so pays the penalty;—but who ever heard of Teddington Lock flying off, and three or four of Piscator's fingers along with it, to say nothing of Miller's Thumbs. He might drag his butt-end all day long through a quick-set, without his engine 'hedging off' and afflicting him with a load of indigestibles in his stomach. Sometimes, but rarely, he accidentally liquidates the debt of

nature. A bank breaks and lets him in—as a bank might do, however, in Lombard Street; or in speculating too sanguinely for a rise, at a fall, he throws all he has into the concern, and is ruined. The juvenile anglers chiefly suffer. A truant, who ought to be at Merchant Tailors', is dragged out of Breeches-Maker's-Hole—or a gudgeon-hunter goes into the other world by the New Cut;—and so might an urchin be drowned whilst merely washing in the City Road Basin. Besides, cockney angling by the small fry, is not fishing, but only playing with water,—as playing with gunpowder is not shooting. To turn to hunting, what a comfortable difference between breaking a joint of hazel and whalebone, and fracturing the hinge of the *os scruffii*, the top joint, I take it, of the human body! How delicious are the pastoral walks of Piscator through the daisied meads—but just ask Rhodes, the great cowkeeper, *à propos* of 'riding over pastures,' what he thinks of a burst in a clover field? The actuary of any life office will tell you something to the point; and, truly, to hunt oneself to death can hardly be separated from the 'voluntary system,' of suicide. The very pace so boasted of, is an aggravation, when a man is running a risk; but if any deadly risk besets Piscator, it is that of his death of cold, and he knows better than to mount a galloping horse to help him in catching it. The rules of his art, indeed, suggest precautions for the care of his person and health; for instance, to keep as far as he can from the edge—not to put his hand in the kettle, nor to strike without just occasion—to avoid lifting great weights, and straining his lines—to have an eye to a weak part—to keep his inside in good order—to avoid chafing and fretting—and take care of entanglements and embarrassments—to guard with a cork against any thing that might run into him to his injury,—and, in short, many little wholesome hints, to be found in any angling guide, almost as clearly laid down as in a medical one. So much for paying in person: now for paying in purse. It is natural to expect that when money mounts up, it will do so on horseback; and, accordingly, hunting is the costliest of field-sports. Let hounds be kept as dog cheap as they may, they will draw heavily on the pocket, and come to a considerable cheque at the banker's. To be sure a man may only subscribe to a pack; or drop in without subscribing; but still he must purchase and keep hunters, and it is well known that every horse 'eats like a horse,' and, like Dando, without the most remote notion of paying for his repasts. Moreover, besides the corn bill, there are others that will be as full of running till the end of the year;—in short, barring a mounted patrol, it is impossible on many accounts for a gentleman to ride to hounds, and go the pace, at a moderate rate. Ramrod may pay his shot upon more easy terms; still, the most killing gun ever put together will not bring down an expenditure. Putting out of sight that 'auld Joe' Manton, whose pieces used to carry such a load o' money, even a decent single barrel is not to be had for a trifle—and, besides the prime cost, there is a kick for three pounds thirteen and sixpence per annum on firing it off. Then there must be pointers, or setters, or spaniels; and besides their cost and maintenance, every sporting dog must answer to the call of the tax-gatherer, as well as to your own, which, as Franklin says, is 'paying rather dear for your whistle,'—and, finally, there must be a manor, or a right of shooting over Shooter's Hill, or somewhere else. Taking all these items, game will come, as well as go, rather high in

the long run — particularly if you pay the carriage. In fact, as some slender annuitants complain towards winter, "firing comes dear" — very dear indeed, if we compare it to Piscator's water-rates. At his first fitting out, how mildly the rod punishes his pocket! How slightly his lines dip into his income! How trifling the expense of baiting a hook to that of baiting a nag! But he needs no horse — only a little horse-hair. The Thames itself is a free fishery — but, should he think proper to subscribe to a water, how moderate his contribution to a river compared with Venator's to a kennel! As for dogs — he does not even require one to fetch his game out of the water — and, above all, let the prime cost and the current expenditure of the angler be what they may, he enjoys one prodigious and exclusive advantage, namely, that he puts in, as well as draws out."

There are many anecdotes of horses, dogs, foxes, hares, and other animals, which we would willingly quote, but our limits will not permit us to do so. Of the admirable embellishments, we mean to speak in another part of our Number.

*Iona, a Tragedy.* By T. Noon Talfourd. 4th edition. To which are added "Sonnets." London, 1837. Moson.

To offer any opinion upon *Iona* now, would be most superfluous. It has undergone the ordeal of every trying kind of criticism, and has come, like pure gold, through them all. First, private and friendly, but astute judgment; then the strange jury of a mixed audience on stage representation; and last of all the public press and the country. And here it is in a fourth edition. We have marked the three letters *i o n* in *italics*, for, besides the genius of the author, we are impressed with the idea that there is much in them, if our philosophy could find it out, something like magic, and in every language where they occur, witness *Iona*, *Ionah*, *Osirion*, *Apollyon*, *Ionis*, *Iuno*, &c. &c. — but, what has ancient philology to do with modern tragedy? We shall say no more but that *Iona* has long been a hobby of ours.

In the present instance it is introduced by a preface, in which the learned author treats so eloquently of the drama, and expresses so forcibly sentiments in which we cordially agree with him, that we have great pleasure in transferring them to our page. Speaking of the honourable, and, as weeks proceed, every hour more honoured effort making at Covent Garden to redeem the drama from its fallen state, Mr. Talfourd says:—

"There is one circumstance attendant on the circulation of this drama which has afforded me peculiar gratification—that it has been read without disapproval by many of those estimable persons whose conscientious scruples withhold them from the theatre, and has won some of them to confess that there is nothing in the form of dramatic poetry necessarily akin to guilty passions and ignoble aims. I am well aware, that it is indebted for this fortune not to any tone of moral feeling superior to that which is to be felt in its more powerful contemporaries, but to the incidental relations of its author, and to the manner of its original distribution: and I refer to it, therefore, with pleasure rather than with pride. If such as these are still deterred from sharing in the refined enjoyments of the acted drama, and from permitting their children to receive from it the vivid impressions which it leaves, by a just fear of the accidental influences with which it has been too frequently associated, they may be assured that an opportunity is now offered

to them of accepting the benefit without the alloy. They will find one of those great theatres, where alone the mightiest effects of heroic action and suffering can ever be felt, or their greatness fitly presented, under the direction of an artist whose personal worth might grace any profession or rank, and who, in seeking to dissipate the languor which has crept over the general heart in reference to the stage, at the sacrifice of his own health and ease, and the risk of his well-earned fortune, has had the virtue and the courage to cast away all vicious appliances, and to discourage every blandishment except those by which art embodies the conceptions of genius. To Covent Garden Theatre the sternest moralist may now conduct those whose moral nurture he regards as his most anxious and most delightful duty, without fear lest their minds should be diverted from the blameless gaieties or noble passion of the scene by intrusive suggestions of vice, which he would skreen, as far as possible, from their thoughts. If, indeed, dramatic representation itself is essentially evil; if it is a crime to render historic truths more vivid by calling forth its angust figures from the depth of time and the silence of books, 'in their habits as they lived;' if it is a sin to displace the rapidity of conversation, revolving in its own small circle of personal experiences, by presenting the genial eccentricities of character to be at once laughed at and loved, and imagining the graces of society without its bitterness; if it is an offence against the beneficent Author of our being 'to hold a mirror up' to the nature he has moulded, in which its grandest and its fairest varieties shall be reflected in the happiest combinations, as that choicest of all his human works—a poet's soul—has cast them; the attempts to remove from the magic glass all external impurities must be fruitless. But if there are those who, while they hold the faith and morals of Milton, are not afraid to accept his precept and to follow his example, I would entreat of them to assist the lessee of a great national theatre in his generous struggle to rescue the stage from the pollutions which have too long debased it. I urge this on them thus earnestly, because, in proportion as the dissipated and frivolous have withdrawn from this intellectual enjoyment, it becomes their province to sustain it; because I firmly believe that its maintenance is most important to the expansion of all that is social, and to the nurture of all that is great within us; because I deem it—not as an instructor in the way of direct moral invitation or purpose—but as dissolving the crust of selfishness which daily cares and labours gradually form about the kindest hearts; as softening the pride of conventional virtue, and bringing the outcasts of humanity within its sphere; and as combining all the picturesque varieties which external distinctions present with the sense of the noble equality which lies beneath them."

To this high appeal we shall add nothing, but content ourselves with noticing that the eight sonnets added to the publication before us are chiefly founded on local circumstances and feelings, and adding the last of them, being the most general in subject, as a specimen of the writer in this species of composition.

"*Fame—the Symbol and Proof of Immortality.*"

The names that slow Oblivion have defied,  
And passionate Ambition's wildest shocks,  
Stand in lone grandeur, like eternal rocks,  
To cast broad shadows o'er the silent tide  
Of Time's unebbing flood, whose waters glide,  
To ponderous darkness from their secret spring,  
And, bearing on each transitory thing,  
Leaves those old monuments in loneliest pride.  
There stand they—fortresses upreared by man,

Whose earthly frame is mortal; symbols high  
Of life unchanging,—strength that cannot die;  
Proofs that our nature is not of a span,  
But of immortal essence, and allied  
To life and joy and love unperishing."

*A Postscript to a Memoir of the Life and Works of William Wyon, Esq., A.R.A., Chief Engraver of the Royal Mint.* By Nicholas Carlisle, Esq. Pp. 63. London, 1837. Printed (as was the Memoir) for private circulation.

It seems that a correspondence has taken place between Mr. Carlisle and Mr. Hamilton, late one of the vice-presidents of the Society of Antiquaries, respecting some observations made in the Memoir of Mr. Wyon on Mr. Pistrucci, chief medallist at the Mint, complaining of the large sums of the public money given to the latter, and the very little he had performed for it, and his present inaction in the public service, notwithstanding his continuing salary. Mr. Hamilton, having read some long extracts from the "Memoir" in the "Numismatic Journal," took up the cause of Mr. Pistrucci, and wrote to Mr. Carlisle, upon the subject of "what was described as the substance, but which must, he presumed, be a distortion of his Memoir;" and, on Mr. Carlisle replying that he was "perfectly satisfied that nothing had been advanced in his Memoir of Mr. Wyon, which was not supported by truth," Mr. Hamilton addressed a long letter to Mr. Carlisle, containing, certainly, some very unmeasured and unqualified strictures on various parts of the "Memoir," where Mr. Wyon is praised, or Mr. Pistrucci, or his receipts and works, were criticised, and took up the quarrel so personally, that he closes his letter by saying he had on the same day resigned his seat as one of the vice-presidents of the Society of Antiquaries, "rather than 'sit at the same board with one, who had gratuitously gone out of his way to circulate aspersions against an individual, whom he was proud to call one of his dearest friends, and whose abilities as an artist were only equalled by his honesty as a man.'"

Upon this strong expression of feeling, Mr. Carlisle has considered it necessary to justify what he has written, by the "Postscript," now under consideration. The correspondence is printed in an appendix, and required this notice, as an introduction to Mr. Carlisle's defence.

When men, so many years before the public, that they have grown old in a well-earned and acknowledged character for learned research, criticism, and taste, enter into personal quarrels, the literary and antiquarian world cannot but deeply deplore such an occurrence. It is not within our purpose, nor our general plan, to take either side of the question, or make an attempt "inter magnos componere lites;" and, therefore, we shall give some extracts, from which our readers may form their own opinions.

"That foreigners, merely as such, should be repelled from the British shores, and be forbidden to introduce their productions of skill, or to propose their works of enterprise, would, indeed, be madness, because injurious to the best interests of the empire. . . . I have merely spoken of that gentleman [Mr. Pistrucci] in connexion with the large sums he has received, and the little duty he has latterly performed in his official capacity; I have arraigned none of his works; I have said nothing of his private character; I have barely treated his professional conduct with that freedom to which every public man is, and ought to be,

\* Mr. Carlisle has been one of the secretaries to the Society of Antiquarians, for above 30 years.

amenable. I have done him no injury; and it would have been well had he, or his friends, shewn similar forbearance, and abstained from that invective which commonly betrays a want of fact and poverty of argument. \* \* \* That Mr. Hamilton should have stepped forward with so much intemperate zeal, to pour the vial of his wrath on a work in which he is nowhere mentioned, nor in the remotest degree alluded to, cannot but be considered as exceedingly strange, perfectly unaccountable. But I shall neither question his motives, nor copy the grossness of his language."

As specimens of the style of Mr. Hamilton's principal letter, Mr. Carlisle, after noticing thirty specific charges of *ignorance*, gives the following:—"Direct, or wilfully indirect misstatement—libellous insinuations—fabricator—deluded—beneath his notice—resign my seat—never can again consent to sit at the same board—gratuitously gone out of his way—rather hardly expressed—to recollect who threw the first stone."

Mr. Carlisle then takes up the different accusations or assertions of Mr. Hamilton *seriatim*, and states his answers, of which we give some as specimens:—"Mr. Hamilton asserts that the little which Mr. Wyon knows of modelling, was gratuitously taught him by Mr. Pistrucci. Had Mr. Hamilton applied to that artist, to whom, of course, as 'one of his dearest friends,' he must have ready access, he could have told him, that he never gave Mr. Wyon any instruction. The fact is notorious, that Mr. Wyon studied in the Royal Academy in 1814, previous to which, in 1813, the large gold medal was awarded by the Society of Arts to him, for an original model in wax of the head of Ceres."

"One of Mr. Pistrucci's first works in steel was an alteration of the half-crown die of George the Third, originally engraved by Thomas Wyon; this alteration he made with the diamond and wheel, tools that he had been accustomed to use in cutting gems. The art of sinking dies in steel with the graver, was gratuitously taught Mr. Pistrucci by Mr. Wyon and his cousin, with which mode of engraving he was previously entirely unacquainted." Mr. Hamilton having stated that Mr. Pistrucci, alone, by his extraordinary exertions, enabled the then master of the mint "to bring out the whole of the new coinage after the peace, in an incredibly short space of time, and under very trying difficulties necessarily attendant upon a new establishment," Mr. Carlisle says,—"The first issue of the new coin from the Bank of England was on the 3d of February, 1817, and Mr. Pistrucci did not enter the mint until the month of September, 1817. \* \* \* Mr. William Wyon was appointed the second engraver in 1816; and it was not until the latter part of the year 1817, that Mr. Pistrucci succeeded as chief, on the lamented death of Mr. Thomas Wyon; but Mr. William Wyon was then most assuredly occupied in the duties of his office."

"When Mr. Hamilton tells us, also, that he has always considered the appointment of Mr. Wyon to the office of chief engraver, 'as a flagrant act of injustice,' he forgets that Mr. Pistrucci's services were discontinued in 1822, in consequence of his declining to copy a bust, made by Mr. Chantrey, of his majesty George the Fourth, and which the king, being dissatisfied with the portrait on the coinage, had commanded should be copied."

"When Mr. Hamilton takes upon himself, in an angry mood, to resign the office of one of the vice-presidents of the Society of Anti-

quaries, he displays the folly of a spoiled child, who punishes himself, whilst he imagines he is teasing others; but, when he assigns as a motive that he cannot sit at the same board with me, he seems, at least, to have the desire of sowing discord in the Society, and of injuring a responsible officer in their esteem. Mr. Hamilton must, however, be allowed to be the best judge of what is most agreeable to his own feelings in this matter; though it may be considered a source of regret, that a gentleman should suffer his irritable temper to be the cause of removing him from a situation which was once the great object of his fair ambition. Friendship is a plant of slow growth, and I am not young enough to form fresh associations with facility: I cannot, then, but lament the termination of an acquaintance of nearly thirty-one years, with one to whom I have ever shewn respect and esteem."

One more extract must suffice:—"Having now gone through the whole of Mr. Hamilton's remarkable letter, although I find much that is 'hardly expressed' against Mr. Wyon and myself, I perceive very little of defence or explanation of what I objected to in his dearest friend, Mr. Pistrucci. If I state that he received 1325*l.* for three jasper heads, I am told that 'I am ignorant'. If I state that he received 1780*l.* on account of the Waterloo medal, which is not yet finished, I am again told that 'I am perfectly ignorant'. If I give a comparative statement of his and Mr. Wyon's receipts and services, I receive no reply. Now, my 'ignorance' is no justification of Mr. Pistrucci: the pleasing duty of defence still remains to be performed by Mr. Hamilton for his dearest friend."

Mr. Carlisle's defence of himself, and his "Memoir," is cool, explicit, and spirited: we have done our duty to the public in laying it before them; and, repeating that we disclaim all partisanship or interposition in the quarrels of others, such a dispute, between such men, and carried to such an extent, is deeply to be regretted.

*Walsingham, the Gamester.* By the Author of "The Life of a Sailor." 3 vols. 12mo. London, 1838. Bentley.

CAPTAIN CHAMIER is more successful at sea than on land: still there are some striking scenes in the present work; among which are some from the late French revolution. These are evidently the production of an eye-witness; and we shall give one, instead of interfering with the progress of the story.

"One of these scenes, which might appal a firmer heart than a woman's, was witnessed from the window of the Café Turc; and all the miseries which Walsingham had pictured on the night when he recommended their flight from Paris were apprehended. It arose from cessation of hostilities for two hours, in order to the gendarmes having solicited from the mob a come to some permanent treaty, which would prevent any further flow of blood. The populace, overcome more by the intense heat of the day than by the actual opposition of their enemies, were overjoyed at this overture, which they fondly imagined would end all the disturbances. They, therefore, after having quenched their thirst, stood in groups discussing the affairs of the day. Some boys climbed the arch of St. Denis, and placed a tricoloured flag thereon, waving their hats, and shouting out, 'Vive la Nation!' No sooner did the gendarmes perceive this favourable opportunity than they resumed the attack upon the unarmed, unprepared citizens, and many were thus slaughtered. A rush

was made at the arms by both parties: but they were seized by the unwounded men and discharged as the police advanced. A savage retaliation now ensued: in vain the wounded soldier cried for mercy—the word was unknown; they were sacrificed, butchered without remorse and without feeling. It was only at the Porte St. Denis that these atrocities were committed. The Swiss troops, who fired on the populace in the Place du Palais Royal in a similar manner, paid dearly for their treachery; but they fought with the intention of dying rather than surrendering, being fully impressed with the erroneous idea, that their abandoning their arms would be the sure step to their murder. The citizens who fought in that quarter of the town were animated with a very different feeling,—murder or plunder was not their intention; and it is one of the most astonishing facts in that revolution, that the thirsty soldiers in many instances refused wine, which they could have procured without the smallest difficulty, and rather chose to continue under the sensation of thirst, than quench it by any other means than water, more especially if the wine was to be procured by plunder. \* \* \*

"The mob were chasing one man, who by his dress he soon recognised to be a gendarme. The poor fellow was wounded, and was making this last attempt to save his life; whilst the infuriated people, most of whom were armed, called out to seize the reptile and fix him as a mark against the Porte St. Denis. This scene had not escaped the party at the Café Turc; for, as the firing had previous to this been partially suspended, the ladies, imitating others of their sex, and gathering courage by example, had without fear advanced to the windows. With intense interest they watched the termination of this affair. The rash man had, in his uniform, ventured from his lurking-place: he was instantly recognised; the revenge which was uppermost in the drunken minds of the mob prompted them to seize their arms, and the poor fellow, seeing their object, endeavoured, by stepping suddenly from side to side, to avoid the death he saw, when too late, perhaps, to be almost inevitable. By his quickness he escaped the ill-directed shots, until one, a mere random fire, struck him in the leg: he felt the wound, but struggled with the pain; the hounds were soon upon him—they seized him, and threw him on the ground. 'Let's all have a shot at him,' said a youngster of about seventeen, who had been placed on the arch, and who had taken not one, but five or six shots at the flying enemy: 'my brother is killed, and I will have revenge!' 'That's noble,' said another; 'of course you shall have a shot at him. Let us place him with his back against the Porte St. Denis, and we will soon have blood for blood.' In drunken society, a hint is almost invariably taken: there is no folly a drunken man will not commit, and no crime of which he is not capable;—such is the penalty exacted for disgracing the human intellect, and of levelling man with a brute. No sooner was the horrid proposition made, than the victim's arms were lashed, and his legs secured against all escape. It required but little time to effect this. The poor fellow was then led to the arch, or rather dragged, and was placed upright against it. 'Hear me, my comrades,' he said, 'before you murder me. I only did my duty, which I was bound to do; why, then, do you seek to kill me, and leave one of your own countrywomen a widow, and three French boys fatherless?' 'My brother! give me back my brother you have murdered!' said the half-drunken lad, 'and then we may listen

to your nonsense. Stand out of the way, boys! I will soon send poor William a companion."

Our chief objection to the narrative is its *dénouement*—reform in such a case is more than improbable.

#### MISCELLANEOUS.

**Sacred Philosophy of the Seasons; illustrating the Perfection of God in the Phenomena of the Year.** By the Rev. H. Duncan, D.D. Pp. 408. Edinburgh, Oliphant and Son; Glasgow, Collins; Dublin, Curry and Co.; London, Hamilton, Adams, and Co.

THIS is the last volume of the series published by the reverend author, and dedicated to the season of Autumn, whose various labours, produce, and appearances, he brings to illustrate his moral and religious lessons. After describing these phenomena, he treats of them in connexion with three great human wants, food, clothing, and architecture. Tracing their early history, he furnishes us with accounts of their existing state, and applies the whole to the impression of those truths which cannot but amend the heart on the best basis of amendment—the infusion of knowledge, and enlargement of the understanding. It is an excellent volume for youthful instruction, and yet so full of curious matter as to be exceedingly well adapted for reading in the family circle, where the attractive and entertaining are desirable components with the more important and serious.

**Mechanics of Fluids, for Practical Men, comprising Hydrostatics, Descriptive and Constructive, the whole illustrated by numerous Examples and appropriate Diagrams.** By Alexander Jamieson, LL.D., Author of "Elements of Algebra." 8vo. pp. 472. London, 1837. Orr and Co.

TREATS fully and practically of a very important branch of philosophy, upon which new lights are breaking every year, and from the cultivation of which much national benefit may be expected.

**The Popular Encyclopædia, Vol. V., Part II.** Glasgow and Edinburgh, 1837. Blackie and Son.

THE present volume of this valuable contribution to the diffusion of popular knowledge, runs from the word "Pedagogue" to the word "Romanzoff;" and is conducted with the same care as its predecessors.

**The Young Scholar's Manual of Useful Knowledge,** by T. Carpenter. 18mo. pp. 72. (London, Darton and Harvey.)

A little volume, conveying a great deal of various information, in the form of question and answer.

**A First Grammar of the Latin Language, Designed for Schools or Private Tuition,** by the Rev. W. Butler, M.A. Head Master of the Free Grammar School, Nottingham. 18mo. pp. 128. (London, Longman and Co.)—This little grammar is admirably adapted to its purpose. The first steps are aided as much as possible, and instructors will find that they have good cause to thank Mr. Butler for his judicious labours.

**The Karikom Restored,** by E. Lakeby. 2 vols. 12mo. (London, Smith, Elder, and Co.)—A very dull and commonplace fiction.

**The Works of William Cowper,** Edited by R. Southey, Esq., LL.D. 12mo. (London, Baldwin and Cradock.)—This volume closes one of the most beautifully illustrated works that has yet appeared even in this age of elegant editions. We know of no fault to find in this admirable work,—it is complete in every way—and Cowper, so long an established favourite, will, if possible, be more popular than ever. These volumes form a valuable and interesting standard work.

**The Death of Marlowe: a Tragedy in one Act,** by R. H. Horne, Author of "Cosmo De Medici," &c. &c. 8vo. pp. 28. (London, Saunders and Otey.)—An attempt after the fashion of the olden dramatists, but we cannot add, at all a successful one.

**Grammar of Modern Geography,** by Peter Parley. 16mo. pp. 344. (London, Tegg.)—A very useful manual, pleasantly adapted to the use of young people.

**The Purtyer: or, the Whole Art of Farming Flower Gardens,** by C. F. Jervis, Esq. 12mo. pp. 40. (London, Bull.)—The directions here are given in such good taste, that we quite long to go and execute them.

**Camillus: a Historical Play, in Five Acts,** by George Condy, Esq. Barrister-at-Law. Pp. 51. (London, Longman and Co.)—There is a good deal of meritorious writing in this play; but the author confesses that it is not fitted for the stage; to which we must add, that it was hardly worthy of publication. It is too level, and wants interest; and we think such comparisons as the subjoined, of Rome under the feet of Brennus, are *infra dig.*

"Camillus. Fear not for her; she'll kick again,  
And give the Gaul her hoof with such a jerk,  
As to let in more light upon his brain  
Than he can see with."

1. *De Porquet's French and English, and English and French Versions, &c.* 2. *Turning English Idioms into French Idioms at Sight, &c.* Second Edition. (London, De Porquet and Cooper.)—Both nice little volumes to help on the student of French to a more perfect acquaintance with the language.

**The Evils of Quarantine Laws, and Non-Existence of Pestilential Contagion: the Privy Council, and College of Physicians; the Means of Prevention and Method of Cure of the Cholera Morbus, and the Atrocities of the Cholera Panic,** by Captain White, late H.E.I.C. Service. 8vo. pp. 176. (London, Wilson; Edinburgh, Oliver and Boyd; Dublin, Cumming.)—The title of this volume tells its story. The author adopts the opinions of the late Dr. Charles Maclean, whom he largely quotes; and argues not very temperately on the subjects here announced. This, however, is not, we fancy, a moment at which the world, and especially the people of London, will be taught to believe that precautions against plague and cholera are ridiculous.

**A Letter to Lord J. Russell on Asiatic Cholera,** by Dr. Joseph Ayre. (London, Longman and Co.)—This pamphlet also questions the means adopted during the cholera panic for restraining the progress of the disease; and enforces the necessity for improving the condition of the lower orders, as the only resource for preventing its fatal recurrence.

**Alfred Societies, &c.** (London, Longman and Co.)—A benevolent plan for establishing sick clubs on a small scale; and strenuously enforced by the writer, Mr. H. L. Smith, of Southam, who has also earnestly recommended the formation of self-supporting charitable and parochial dispensaries.

**Library of Entertaining Knowledge: Lane's Modern Egypt, Vol. II.** (London, Knight.)—We have so recently finished a detailed review of this work, in its original form, that we need only mention here its completion as part of this "Library."—*See*

**Larner's Cabinet Cyclopædia, No. XCVI. Biography, Vol. III. Eminent Literary and Scientific Men of Italy, Spain, and Portugal.** (London, Longman and Co., and Taylor.)—This volume contains lives of distinguished Spanish and Portuguese writers, and is not remarkable either for very good style or novelty of material.

**School Books.**—**First Grammar of the Latin Language,** by the Rev. W. Butler, M.A. Pp. 128. (London, Longman and Co.; Nottingham, Dearden.) **An Abridgement of Murray's English Grammar,** by the Rev. J. Ellis, jun. Pp. 148. (London, Moore; Manchester, Baileys and Co.; Selby, Galpin.) **The Young Scholar's Manual of Useful Knowledge,** by Thomas Carpenter. Pp. 72. (London, Mead, Darton and Harvey, Edwards.) **Homonyma Lingue Latine,** by T. Swinburne Carr. Pp. 119. (London, Schloss.)—All very nice little elementary books in their way.

**Practical Religion; or, Christian Obedience, in a Series of Twelve Sermons,** &c. 8vo. pp. 141. (London, Longman and Co.; Bath, Simms and Collins.)—Very short discourses, but replete with excellent advice and sound practical observation.

**Tales about Wales, with a Catechism of Welsh History,** by a Lady of the Principality. Second edition. Edited by Captain Basil Hall, R.N. pp. clxx. 330. (Edinburgh, Cadell; London, Whittaker.) A nice little volume, in which historical stories and traditions are pleasingly told. It well deserves to have come to a new edition.

**Science of Life Insurance,** by Peter Watt, Accountant, Edinburgh. 8vo. (Edinburgh, J. Anderson; London, Smith, Elder, and Co.)—A valuable treatise on a very important subject, not yet thoroughly understood. It is illustrated by tables, which are curious and interesting; and some of the general remarks are original and sound.

**A Practical Treatise on Warming Buildings by Hot Water, &c. &c.,** by C. Hood, F.R.S.A. 8vo. pp. 216. (London, Whittaker.)—Many woodcuts illustrate Mr. Hood's investigation of this useful invention. Tables constructed on calculations respecting radiant and conducted heat, rules theoretical and practical, and thence the correction of past errors, come all within the scope of his treatise, which is certainly the most complete we have hitherto seen.

**Remarks on Mathematical or Demonstrative Reasoning; its Connexion with Logic, and its Application to Science,** &c. 8vo. pp. 135. (London, Green.)—This treatise displays much ability; but the questions it discusses are rather too abstract to be introduced at length into our pages. The application of the author's opinions to several recent physical and metaphysical publications give it popular interest. He is a strenuous admirer of Hartley and Mill.

**The Judgment of the Anglican Church (Prior to the Reformation), on the Sufficiency of Holy Scripture, and the Authority of the Holy Catholic Church in Matters of Faith; as contained in her Authoritative Formularies, and illustrated by the Writings of her Elder Masters and Doctors, with a copious Introduction and Notes,** by J. F. Russell, S.C.L. Cambridge. 8vo. pp. 287. (London, Baily and Co.; Oxford, Parker; Cambridge, Stevenson.)—The title-

page explains the nature of this publication, which (says the Preface) is designed to set at rest (so far as the decision of the Church of England is concerned) the important questions of the sufficiency of Holy Scripture, and the value of Catholic tradition. The misrepresentations of Roman and other sectaries, and the peculiar aspect of the times, seem peremptorily to call for such an exhibition of "The Judgment of the Anglican Church." For this purpose copious extracts are given from her Articles, Canons, and other authorised formularies, and the writings of her elder champions. As we never meddle with polemics, we are content to let the author explain his own design; and have only to notice, that he has consulted and quoted a mass of high and interesting authorities.

**The History of England, Vol. I.** (London, Rickerby.)—A new edition of Hume and Smollet, edited by Mr. Stebbing, is here begun, with an Essay on the Study of History, by the reverend editor. The vignette represents Caractacus before the emperor Claudius.

**A Succinct Statement of the Kaffer's Case, &c.,** by S. Kay, late Missionary. Pp. 99. (London, Hamilton and Co.; Nottingham, Dearden.)—Mr. Kay, in this letter to Mr. Fowell Buxton, strongly censures the frontier policy of the Cape, and condemns the late Kaffer war, in the warmest manner of a native partisan.

**Conversations on the Human Frame and Five Senses.** Pp. 280. (London, Darton and Clark.)—A small tome, in which these subjects are discussed in familiar conversation, and illustrated with plates for the information of youth.

**The Apprentice's Pocket Guide to Wealth.** Pp. 122. (Glasgow, M'Phun; London, Cotes; Edinburgh, Whyte.)—Much good advice in small compass, with appropriate additions from the writings of Franklin.

**A New Guide to Cheltenham and its Environs.** (Cheltenham, Lee; London, Whittaker and Co.)—A second edition, with improvements, and very useful to the visitor of this place of sanatory and fashionable resort.

**The Nabob's Wife,** by the Author of "Village Reminiscences." 3 vols. (London, Bentley.)—We thought, after we had made some progress in these volumes, that we had fallen in with some of the elderly tomes, the dust of which is rarely disturbed. It is essentially a novel of the old school, full of delicate distresses, improbable difficulties, and all sorts of charming impossibilities.

#### ARTS AND SCIENCES. GEOLOGICAL SOCIETY.

WEDNESDAY, November 15th. Rev. William Whewell, president, in the chair.—The first communication read at this meeting, was a letter from W. C. Trevelyan, Esq., to Dr. Buckland, describing first, some indications of an elevation of the land having taken place, which he had observed in 1833, in a visit to the Channel Islands, and especially in Guernsey, where, on the shore near the point where the road descends towards the rock or islet of Lihou, in the east of that island, may be seen sections where, above the present high-water mark, the granite rock bears evident marks of having been rounded by the action of the waves, previously to the deposition on it of a bed of gravel, which now covers it and fills up the inequalities of its surface. The gravel, consisting of pebbles of neighbouring rocks, but also of chalk flints, is firmly bound together by ferruginous angular sand, and extends to eight feet above the present high-water mark. On the N.W. of the island similar gravel occurs, resting on the surface of a syenitic rock, which bears evident signs of disturbance from subterranean agency. Into the fissures formed in this rock the gravel has forced itself, as well as under some masses which seem still to be in connexion with their original rocks. The author then draws attention to what he considers a proof of the elevation of the land on the coast of Jutland, near Frederick's Haven (not far from the Scaw). This consists in the country near this place abounding with sepulchral tumuli, with the exception of a lower and an extensive tract bordering on the sea, on which none occurred. He, therefore, supposes that the latter may have been elevated since that mode of burial was disused in that country, which he believes was about the eighth or ninth century. The author concludes with a notice of some extensive tertiary (*pleiocene*) beds which he had visited near Porto d'Anzio (the ancient Antium). These form cliffs, about 50 feet high, and contain numerous shells, but

little altered, and not at all water-worn, and which are apparently of the same species as those now inhabiting the neighbouring sea. *Pecten jacobaeus*, and *P. opercularis*, are the most numerous, and often so much as to form considerable beds. These may be traced some way into the interior, and to elevations of two, or 300 feet above the sea, where are quarries which were worked in ancient times. In the neighbourhood a stream of water was seen, holding in solution sulphate of iron with excess of acid, and near which sulphur is dug out. A letter was then read from Sir R. Smirke to Dr. Buckland, forwarding another to himself from Mr. Edge, in which the latter described that, in sinking a well at St. Peter's, in Jersey, his workman had, at a depth of 45 feet, met with a block of granite six feet in thickness, which they were obliged to blast. Below this was found a small quantity of peat, and also some pieces of fossil timber in the state of bog-wood. A paper was commenced by J. Malcolmson, Esq. F.G.S., Madras Medical Service, 'On the Fossils of the Eastern Portion of the Great Basaltic District of India.'

## BOTANICAL SOCIETY.

THURSDAY, Dec. 7.—Read a paper 'On the Character, Affinities, Places of Growth, Economical Uses, and Geographical Distribution, of the Mosses,' by D. Cooper, Esq., curator. The natural division under which these plants are arranged is the following:—Acrogens, acotyledonous, cryptogamic, or flowerless plants; sexes absent; sporules instead of leaves. Their essential character—erect or creeping, terrestrial or aquatic, cellular plants having a distinct axis of growth, destitute of a vascular system, and covered with a minute imbricated, entire, or serrated leaves: reproductive organs of two kinds. Their peculiar external and curious internal organisation cannot fail to excite a lively interest, even in those who have made but little progress in the study of these plants. In the empire of Flora, the mosses rank with the most humble subjects—no arborescent one has hitherto been discovered: even the largest of them, such as *Polytrichum commune*, *Tinania longistata*, seldom much exceed a span in length: the genera *Phascom* and *Grimmia* contain several species, which can only be observed by the aid of the lens. In their places of growth the mosses are very remarkable; for, although most partial to shady and moist places, they thrive in very different kinds of soil, and even exposed to the intense heat of the sun in arid situations; on the southern side of barren rocks, and other sunny places; in pure dry sand, on bare quartz, on rocks of porphyry and granite, on calcareous rocks, on pit coals, and in argillaceous soils. The genera and species of the different localities were described. The mosses grow most luxuriantly in morasses, and are the principal components of peat and turf fuel: rivers, brooks, and springs, also abound with them,—the species *Fortunalis*. They also inhabit, as is well known, stems and branches of trees. For these parasitical mosses the *Lichens* prepare the necessary mould; and they, in their turn, afford the material for succeeding generations of the more vascular plants. Low temperatures suit them best, and they abound in the northern regions. In the southern hemisphere, also, they particularly extend towards the pole. Norway and Sweden are the true native country of the mosses. The northern parts of Siberia, towards the coast of the icy Sea, is, for the width of some hundred versts, an immensely extended morass, where, in the middle of summer, the thaw never penetrates

more than a span deep. Here the whole soil is covered by mosses, thriving although their roots are only just above the external crust of ice, on which, even in summer, sledges are drawn by rein-deer as far as the coast. The mosses are among the first vegetables that clothe the soil with verdure in newly formed countries; and they are the last that disappear when the atmosphere ceases to be capable of nourishing vegetation. The first green crust on the cinders of Ascension was minute mosses. They form nearly half of the flora of Melville Island; and the black and lifeless soil of New South Shetland is covered with specks of mosses struggling for existence. How they find their way to such places, and under what laws they are produced, are mysteries that human ingenuity has not yet succeeded in unravelling. About eight hundred species are known. Of the properties of the tribe, but little can be said. In the economy of man, they perform but an insignificant part: in the economy of nature, how vast!

## ENTOMOLOGICAL SOCIETY.

DEC. 4th. J. F. Stephens, Esq. president, in the chair.—Various donations of entomological works were announced, including a copy of the extensive and rare German periodical, "Der Naturforscher," and thanks ordered to be given to the several donors thereof. Mr. G. F. Shipster was elected a member of the Society; and certificates in favour of four other gentlemen were read. A specimen and drawing of the New Zealand caterpillar, attacked by a parasitic fungus, six inches in length, recently figured by Sir W. Hooker, under the name of *Clavaria larvarium*, were exhibited by Mr. Evans, which led to some discussion on the physiology of these vegetable parasites. Mr. Westwood gave some account of several recent memoirs, by Professor Weismann, of Brussels, descriptive of various monstrous and hermaphrodite insects; the most curious of which was a specimen of the fine butterfly *Nymphalis populi*, found in the winged state, but still retaining the head of the caterpillar; beneath which were discovered the head-case of the chrysalis, and the real head of the butterfly. The following memoirs were read,—'Observations respecting various Insects which, at different times, have afforded Food to Man,' by the Rev. F. W. Hope, vice-president. In this memoir the author confined himself to the coleopterous, hemipterous, and orthopterous, insects, of which he enumerated a great number of species used as food. 'A Translation from Cason Schmidberger's Observations on the Natural History of the Paradoxical Pear-fly (*Psalis bosci*),' extracted from M. Kollar's recently published work on the insects injurious to vegetation, was also communicated by Mr. Westwood. A discussion, of considerable extent, took place on the various memoirs alluded to.

## ELECTRICAL SOCIETY.

SATURDAY, Dec. 2.—Mr. Sturgeon read an introductory paper, 'On experimental and theoretical researches in electricity.' The object of the series is to exhibit such an arrangement of facts as must influence and direct the reasoning of those philosophers who, at present, differ in opinion as to the *modus operandi* in the production of electrical phenomena. To effect this great desideratum, caution, vigorous circumspection, and impartiality, must be exercised; Mr. Sturgeon will have to divest his mind of all preconceived views, relate facts as they occur, and not as they bear upon

any favourite theory of his own; and faithfully illustrate, by experiment, each phenomena. Mr. Sturgeon promises that "the experimental data to be advanced shall be obvious and unequivocal; and his reasoning plain, lucid, and familiar." He also proposes to reinvestigate the great variety of phenomena which aid the establishment of some of those unalterable principles upon which the science must ultimately rest. The theories of the present time, each supported by men of the highest talent, are those of two fluids of one fluid only, and the vibratory theory. The latter Mr. Sturgeon considered to be founded upon the effects of the motions of matter alone; and asks, 'Can any one suppose that the Leyden jar is charged by the quiverings of glass or copper? or that the glass will continue its quakings for a week, or even for a much longer period? The evidence in favour of the vibratory hypothesis depended much upon analogy to the doctrines of sound and light; but, without the ignition of inflammable matter there could be no light; without matter in motion there could be no sound.' This is contrary to the views of an able supporter of the vibratory theory, as shewn in our report of the Electrical Society in a recent number. Mr. Pollock there admits a universal fluid, which, if any thing, must be matter; and conceived that the equilibrium of this fluid was disturbed by the contracting and expanding of the ponderable bodies; which disturbance caused currents and their consequent phenomena. Be this as it may, we have no space for controversy. Mr. Sturgeon proceeded to prove the existence of electrical matter by the flash, report, and perforation of a card or glass: the latter is sometimes reduced to powder, to produce which something must have agitated the atmosphere: without matter a solid body could not be perforated. Further, the effect on the animal organs upon which this something impinges, and its transmission through the body, afford mechanical evidence of electrical momentum: if sent with great velocity, a violent shock would be felt; whereas, the same quantity spun out, as it were, through inferior conductors, the velocity, the momentum retarded, would scarcely give any shock at all—the effects would be decreased considerably. The evidence of momentum was also shewn by gunpowder being placed in the circuit; the discharge through metallic conductors only scattered, passed along a thread, ignited it; the powder requiring certain contact with heat for its combustion.

## WESTERN LITERARY AND SCIENTIFIC INSTITUTION.

THE half-yearly general meeting was held on Monday, and from the report then read, the affairs of this institution appear to be in a very flourishing condition. It has just received the patronage of the Queen, and its library numbers about 6000 valuable works. There was some discussion about building suitable premises on another locality; but it was finally determined that the present establishment should be enlarged. The meeting, which was well attended, then broke up.

LITERARY AND LEARNED.  
UNIVERSITY INTELLIGENCE.

OXFORD, Dec. 1.—The following degrees were conferred:—

*Masters of Arts*.—Rev. H. P. Smith, Lincoln College; Rev. E. T. Yates, Oriel College; Rev. T. Brancher, Fellow of Wadham College.

*Bachelors of Arts*.—A. Rigby, Grand Compounder, J. F. Smith, Hulme Exhibitioner, Brasenose College; J. G. Lonsdale, Scholar, F. F. Seymour, Balliol College; C. T.

Wilson, Lusby Scholar, G. Smith, Magdalen Hall; J. Simeon, Christ Church; J. G. Hickley, A. W. Haddan; T. B. Cornish, Scholars, M. E. Herne, Trinity College; J. W. Twist, W. Whitelegg, Queen's College; T. S. G. B. Lennard, Merton College; J. B. Paige, G. France, Exeter College; R. D. Michell, Wadham College; D. Lewis, Scholar, Jesus College.

CAMBRIDGE, Nov. 29.—The following degrees were conferred:—

*Master of Arts*.—Rev. J. Robinson, Jesus College.  
*Bachelor in Civil Law*.—H. B. Pigot, Trinity Hall.

#### ROYAL SOCIETY.

MR. BAILY in the chair.—Dr. Roget read the president's annual address. His royal highness commences it by observing, that he hoped the removal of the malady which had afflicted his eyes would have enabled him, with becoming regularity, to attend to the duties of president of the Royal Society; that hope, however, had been frustrated by a long and severe illness; still, he entertained better hopes for the future; but, if he continued to find himself unable to preside at the meetings of the Society, he should certainly resign the chair to another. A warm and just eulogy is then paid to the memory of his late majesty, the last patron, and one who was not more distinguished by his exalted station than he was by his virtues as a brother, husband, and friend; in him, indeed, were centered all the merits of the monarch and the man. Her Majesty the Queen had been graciously pleased to extend her patronage to the Society, and to continue the grants of money given in the first instance by George the Fourth, and afterwards by William the Fourth, for defraying the charge of the royal medals. In announcing this to the council, her majesty cordially joins in the wish of the Society, that her reign may be characterised by the promotion of the arts of peace. The address then notices the disposal of the medallions, as reported in the last *Literary Gazette*, viz. one of the royal medals to Mr. Whewell, for his papers on the tides. The second royal medal, which was set apart for the best essay on chronological geology, that might be written between 1834 and 1837, had not been awarded, as no paper on the subject had been presented. M. Becquerel and Mr. Danielli were the individuals to whom were awarded the Copley medals. His royal highness then notices the letter he had received from Baron Humboldt, in reference to the establishment of magnetical observatories throughout the world; measures to execute which had been taken, and observatories, in consequence, had been established at Greenwich, Corfu, Ceylon, Hobart Town, Barbadoes, Bagdad, Cape of Good Hope, &c. It was gratifying to know that the Lords of the Treasury, who, with the Lords of the Admiralty, were always ready to aid the objects of the Society, had placed at the disposal of the council, a sufficient sum for carrying these desirable ends into effect. The address next touches upon Mr. Panizzi's connexion with the Society, and his royal highness emphatically declares that he was not only cognisant of all the acts of the council in reference to Mr. Panizzi, but fully approved of them at the time, as he did now. That gentleman had received more money by upwards of 200% than he was fairly entitled to; and it was not until after a lapse of 16 months, that he publishes a pamphlet on the subject instead of asking for payment from the council. In a word, after the maturest consideration, the council were satisfied that Mr. Panizzi's representations are unwarrantable and erroneous, and that the assertions in reference to Mr. Robertson are equally unfounded. Unfinished sheets, too, of the catalogue were put to the ordeal of the severest criticism,

for the purpose of lowering the Society in the eyes of the world. Since last anniversary the Society had lost, by death, twenty fellows, and two foreign members. Amongst them was his majesty, William the Fourth, as already mentioned; Mr. Colebrook, the greatest Sanscrit scholar of the age, as well as a most munificent patron of the sciences; as was shewn by his splendid donation of Sanscrit MSS., worth 10,000*l.*, which he made to the library of the East India Company, in order that they might not be dispersed by the fluctuations of inheritance. Dr. Latham, the father of the Royal Society, was another loss during the past year. After he was 82 years of age he wrote his "History of Birds," one of the best works on ornithology, and extending over eleven volumes. Dr. Tiarks—Dr. Ritchie, singular for his skill and simplicity in performing the most delicate and difficult experiments with the commonest means; and alike remarkable for his ardour and determination in the cause of science. And, lastly, poor Davidson, murdered by savages, in the full vigour and prime of life, were amongst the number.

#### SOCIETY OF ANTIQUARIES.

THE Earl of Aberdeen in the chair.—Mr. Hunter communicated historical remarks on the measures taken for the apprehension of Sir Thomas de Gournay, charged as one of the murderers of King Edward II., and of his death. It appears that he had escaped to the continent; and, of the old chroniclers, some alleged that he was taken at Marseilles, others, at Burgos, in Spain; that his journey to England, in custody, was commenced; and that, by the orders of some influential parties in England, he was beheaded on board ship, on the voyage, from a fear that he would implicate others if brought to trial here. But Mr. Hunter had found in Rymer's *Fœdera*, several documents relating to Gournay, consisting of letters, accounts of charges for travelling and other expenses, &c.; from which it is quite evident that he was taken at Burgos, and that Edward III. immediately despatched a commissioner to demand him from the Spanish authorities, and bring him to England for trial. The commissioner went to the Spanish court, and followed it from place to place for some months, during which time he was put off by excuses and delays, which shew a reluctance in the government of Spain to give up the prisoner. Having, at last, however, obtained an order for his delivery, he proceeded to Burgos, where he discovered that Gournay had found means to escape. The commissioner then proceeded in various directions, endeavouring to discover the place of the fugitive's retreat; and, at length, returned to England, after an absence of more than twelve months, without having attained the object of his mission. Subsequently, however, Sir Thomas de Gournay was made prisoner at Naples, on some local charge; on hearing of which Edward III. immediately despatched another messenger, with a letter to the king of Sicily, demanding the custody of the prisoner for trial in England. The request was complied with; and Gournay set off, in custody, on his journey hither. He is then traced to several places on the route, until his arrival at Bayonne, where he fell ill; and so far from a desire to dispose of him before his arrival in England, it appears that every care was taken of him, as he was attended by two physicians, the expense of which was charged to the English government. He, however, died, and was buried at Bayonne; and, notwithstanding the long existence of the *Fœdera*,

this historical blunder has never been rectified until now. As an appendix to this paper, Mr. Hunter added an account of the expenses of the removal of the deceased king from Berkeley Castle to Gloucester.

#### LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

*Monday*.—Royal Geographical, 9 P.M.; Medical Society, 8 P.M.  
*Tuesday*.—Zoological, 8½ P.M.; Society of Arts, 8 P.M. (on Calico Printing, by the Secretary); Royal Medical and Chirurgical, 8½ P.M.  
*Wednesday*.—Geological, 8½ P.M.; Society of Arts, 7½ P.M.; Medico-Botanical, 8½ P.M.  
*Thursday*.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Royal Society of Literature, 4 P.M.  
*Saturday*.—Royal Asiatic, 2 P.M.; Harveian, 8 P.M.; Westminster Medical, 8 P.M.; Electrical, 7 P.M.

#### FINE ARTS.

##### INSTITUTE OF BRITISH ARCHITECTS.

MONDAY, Dec. 4. J. Papworth, Esq., V.P., in the chair.—Read, letter from Lord Melbourne to the president, Lord de Grey, intimating the gracious consent of her majesty to become patroness to the Institute; from the secretary to the Imperial Academy at Venice, acknowledging, with thanks, the receipt of the first part of the transactions of the institute, stating the intention of the academy to have it translated into Italian, and communicating their contemplated publication of designs by native artists. Several letters had been received from various parts of Great Britain, with expressions of anxiety for the establishment of branch societies; and one from the Manchester society, requesting friendly correspondence on matters of professional interest and utility. The first part of a paper on 'the English School of Gothic Architecture' was read by J. Blore, associate; also, by the secretary, a communication from the Chevalier Von Kleuse, honourable and corresponding member, describing a peripteral Ionic temple, erected by him at Munich, and decorated with polychromatic embellishments. A very valuable unique collection of original architectural drawings, by Panini, Bibiena, Oppenord, Benvenuto Cellini, and other eminent artists, presented, through Mr. Barry, by Sir John Drummond Stewart, attracted the particular attention of the meeting. It had been intended for the British museum, but subsequently considered more appropriate, and of greater practical utility, to the Institute of British Architects.

##### ARCHITECTURAL SOCIETY.

TUESDAY, Dec. 5. T. H. Wyatt, Esq., V.P., in the chair.—Various donations, the subjects for the sketches at the next meeting, and the following prizes, in addition to those already offered by the society, were announced. By Mr. Owen Jones, member, a gold copy of his work on the Alhambra, to the student who produces the most approved measured finished drawings and details of the garden front of the Travellers' club-house; by M. G. Mair, annually, an architectural work to the student producing, during the session, the greatest number of approved sketches, agreeably to the instructions of the sketching committee. An interesting paper was read by Mr. R. E. Philips, on sound, as connected with architecture. The author stated that it was a subject demanding the serious consideration of every architect, and regretted that it was so little attended to by our committees of taste, or even by the commissioners for the erection of new churches. He then expatiated upon the nature of sound, and the theory of acoustics generally and its laws, treating also of whispering galleries and echoes, observing, with regard to the latter, that every

point against which the pulses of sound strike, becomes the centre of a new series of pulses and sound, describes equal distances in equal times; therefore, when any sound is propagated from a centre, and its pulses strike against a variety of obstacles, if the sum of the right lines drawn from that point to each of the obstacles, and from each obstacle to a second point, be equal, then will the latter be the point in which an echo will be heard. For a distinct perception of the direct and reflected sound there should intervene an interval of 1-9th of a second, in which time sound describes nearly 127 feet; and, therefore, unless the sum of the lines drawn from each of the obstacles exceeds the interval by 127 feet, no echo will be heard: hence all the points of the obstacles which produce an echo must lie in the surface of the oblong spheroid generated by the revolution of this ellipse round its major axis. However, an echo may be heard in other situations, though not so favourably, as such a number of reflected pulses may arrive at the same time at the ear, sufficient to excite a distinct perception. At the common rate of speaking, we pronounce not above three syllables and a half, or seven half syllables in a second; therefore, that the echo may return just as soon as three syllables are expressed, twice the distance of the speaker from the reflecting object must be equal to 1000 feet; for, as sound describes 1142 feet in a second, 6-7ths of that space, that is, 1000 feet nearly, will be described while six half, or three whole syllables are pronounced. The speaker must stand 500 feet from the obstacle, and, in general, the distance of the speaker from the echoing surface, for any number of syllables, must be equal to the seventh part of the product of 1142 feet multiplied by that number. In churches we never hear a distinct echo of the voice, but a confused sound, when the speaker utters his words too rapidly; because the greatest difference of distance between the direct and reflected courses of such a number of pulses as would produce a distinct sound is never, in any church, equal to 127 feet—the limit of echoes. The reflection of sound in passages and rooms were likewise investigated. Mr. Phillips concluded by enforcing the importance of the subject, in relation to our churches, theatres, and public halls.

## NEW PUBLICATIONS.

*Her Majesty, the Queen Victoria.* Engraved from a model by Mr. H. Weigall, by A. R. Freebairn. Bates's patent Anaglyptograph. Robert Jennings.

THIS exquisite work, the largest that we have yet seen produced by the true machine, will mark an era in this art. Mr. Weigall has been fortunate enough to produce by far the most accurate and beautiful likeness of our youthful sovereign yet seen; and there is a simplicity and taste about the entire appearance of this engraving which cannot fail to recommend it to an extensive sale among loyal subjects, and persons of taste. The head, which is as beautiful as it is beautifully executed, is in a medallion, resting on branches of laurel and of oak; and, below, in a wreath of roses and lilies, is inscribed the word *Victoria*. There is no overloading with ornament, and throwing into obscurity the chief object by its decoration. The ground of the medallion is so pure in tint, that the head appears as in a mirror—delicate, brilliant, and effective. A crown is placed above the medallion. The height of the engraving is 15 inches by 9 wide. We have always felt a strong interest in this curious and beautiful art, and we congratulate those who have been engaged on this on their success in producing such an exquisite example,—valuable at once for its striking resemblance, and as a triumph of British skill and talent.

*The Baptism of the Covenanters.* Painted by George Harvey, S.A.; engraved by C. E. Wagstaff. Hodgson and Graves.

In a deep and sequestered glen, through which runs a babbling brook, a party of the faithful have assembled for the purpose of performing this interesting religious rite. The subject has permitted the introduction of all the stages of human life, from infancy to old age; and Mr. Harvey has availed himself very happily of the contrast of character thereby furnished.

In our No. 1076, we noticed Mr. Swandale's portrait of our young Queen, and have now had the pleasure of seeing the engraving of it in progress, for Ackermann and Co., by Mr. O. Geller. It certainly promises to be one of

the sweetest resemblances of her majesty, and in a taste to render it extremely popular.

*Sporting.* Embellished by large Engravings and Vignettes, illustrative of Field Sports, &c. Edited by Nimrod. Baily and Co.

In a previous page we have given some account of the text of this superb quarto. Our present concern is with its numerous and beautiful embellishments. Some of our best artists, painters, and engravers, have combined their talents in the production of them. There are four from the pencil of Edwin Landseer—"Glen Fishie," engraved by T. Landseer; "The Pug," and "The Mourner," engraved by Hison; and "Browsing," engraved by C. G. Lewis. They are all excellent; but the last is our favourite. Well does Nimrod observe that, when he first saw it, he involuntarily exclaimed, "This goat must be from the pencil of Edwin Landseer. The snub nose, the long beard, the placid eye, the scabrous horn, the beautifully formed ear, and the waving coat, are truly characteristic, and must strike even such an ignoramus in these matters as myself to be at once the production of a master-hand." Mr. Cooper has furnished a dozen subjects; among the most striking of which are—"Greyhound and Hare," engraved by R. Parr; "Fox breaking Cover," engraved by W. R. Smith; and "Brood-Mare Harriet," engraved by J. H. Engleheart. To Mr. Hancock the volume is indebted for some most spirited and characteristic compositions, especially "The Warrener," engraved by R. Parr; "Rat Hunting," engraved by T. S. Engleheart; and "Deer Stalking," engraved by W. Greatbach. Mr. T. S. Engleheart has done himself great credit by his exquisite engraving after Gainsborough's well-known "Ass Race." Mr. Laporte's "Brood Mare and Foal," engraved by W. Hacker, is a very clever performance. Nor must we omit to mention with high praise the woodcut vignettes, executed by Wright and Folkard, from designs by W. Barraud. We repeat what we have already intimated elsewhere, that, although this volume is particularly addressed to the sportsman, it must be generally acceptable to all classes of readers and admirers of the fine arts. We have much pleasure in exhibiting a specimen of the vignettes.

*Saunders's Portraits and Memoirs of the most Eminent Living Political Reformers. Part II.* "The Rt. Hon. Viscount Melbourne," "John Temple Leader, Esq. M.P." and "George Grote, Esq. M.P.," furnish the graphic illustrations of the present Part of Mr. Saunders's publication. The portrait of the first is from Sir Thomas Lawrence's well-known and Kemble-like head of the noble viscount, of which Mr. Robinson has in his print preserved the spirit and character with admirable fidelity. Mr. Leader and Mr. Grote's portraits are very ably engraved; the former by W. H. Mote, from a painting by B. E. Duppa; the latter by H. Robinson, from a drawing by S. P. Denning.

## ORIGINAL POETRY.

STANZAS: THE TOMB.

Few years ago I shunned the tomb,  
And turned me from a tablet-stone;  
I shivered in the churchyard gloom,  
And sickened at a bleaching bone.

Then all were round my warm young heart—  
The kindred tie—the cherish'd form;  
I knew not what it was to part,  
And give them to the dust and worm.

But soon I lost the gems of earth,  
I saw the dearest cold in death;  
And sorrow changed my joyous mirth  
To searing drops and sobbing breath.

I stood by graves all dark and deep,  
Pale, voiceless, wrapt in mute despair;  
I left my soul's adored to sleep  
In stirless, dreamless, slumber there.

And now I steal at night to see  
The soft, clear moonbeams playing o'er  
Their hallowed beds, and long to be  
Where all most prized have gone before.

Now I can calmly gaze around  
On osiered heaps with yearning eye,  
And murmur o'er the grassy mound—  
"Tis a glorious privilege to die."

The Grave hath lost its conquering might,  
And Death its dreaded sting of pain,  
Since they but ope the path of light  
To lead me to the loved again.

ELIZA COOK.

## HYMN TO THE CROSS.

Of Jesus and the Cross,  
Hear, ye nations of the free,—  
Where Atlantic billows toss,  
List, ye dwellers on the sea,  
For the mission of our Saviour hath passed;  
And hath scattered o'er the plain  
Its false temples, rent in twain,  
With their idol gods profane,  
Like the blast!

In no chariot of cloud,  
With its whirlwind-wheels of flame,  
Whilst the conscious mountains bowed,  
He, the great Messiah, came!

But the meekest star of heaven shed its glow,  
And the leafless boughs did wave  
O'er the mightiest to save,—  
O'er the conqueror of the grave,—  
Sleeping low!

He spoke—and demons fled  
From the vengeance of his word;  
And the wild graves of the dead  
Shrank and trembled as they heard,—  
For the mystery of God was on his breath:  
Although priest and scribe denied,  
In the madness of their pride,  
What the gates of hell knew wide,—  
And deep Death.

My Saviour is my song,  
Who the mount of faith hath rear'd;  
Who hath stricken down the strong,  
And the lost and lowly cheered;  
Descending like a dove upon their souls.  
When the orphans' wail was o'er,  
And the wrecked and wind-beat shore  
Heard the cry of those no more,  
Christ consoles.

And they to whom the morn  
Brought no beauty—lent no light,—  
At his touch, their world was born!  
For sweet Jesus gave them sight;  
And the lame through the flowery meads could  
run;  
And the deaf, who never heard  
A fond mother's grateful word:  
And the dumb—sang like the bird  
To the sun!

Yet he, the Son of God,  
That immortal blessings shed,  
Whilst the wilderness he trod,  
Knew not where to lay his head—  
Though the wild lynx and leopard had their  
lair.

But the heavens bowed, and came  
At a whisper of his name;  
And sleep mantled his worn frame  
Even there.

The eastern monarch lay  
Amid gold and purple bound,  
Whilst a myriad lamps, like day,  
Shed a summer softness round;  
And vassals throng'd in thousands at his tone.  
But the mockery that lies  
In rich gems and ophir dyes,  
When Jehovah ope the skies,  
Will be shewn!

As was prophesied of old,  
So its coming soon may be,  
When the arrogant and bold  
Shall grow weak o'er land and sea;  
And the conquest shout of empire be unknown;  
The devouring sword no more,  
Nor war's arrows, drunk with gore,  
Scatter carnage, as of yore,  
For a throne!

Wild shouts through Siou ran,  
Mid the zealot's scoff and gibe,  
When the "cursed" of God and man,  
Sold his Saviour for a bribe.  
Where the fatal tree frowned dark 'neath the sky,  
As, all bruised and bound, they led  
Their Redeemer, blood to shed—  
The heavens veiled their head  
Upon high.

And the mighty mountains fell  
With an earthquake-voice of woe;  
And the buried rose to tell  
All the horror guilt must know;  
But thunder-writ, it spoke where'er they trod:  
"Let the shuddering seas proclaim,  
And the hills, struck dark with shame,  
In their far depths own the name  
Of their God!"

Manchester.

C. SWAIN.

## DRAMA.

*Drury Lane.*—The opera of *Joan of Arc* continues to be performed nightly; but yet we are not sorry that our notice of it last week was necessarily very brief, nor are we inclined to treat it now at any length in detail. With regard to the public, it is worse than a complete failure; for it is tiresome to have no change from the same mediocrity: and even the crowd of London population must, in such a case, fail

to supply sufficient audiences. We regret to have to say, that Mr. Balfe has not increased his reputation by this opera; on the contrary, his "Light of other Days has faded," and it is inferior to his former musical productions. But we would not state this to dishearten so young and so gifted a composer. The best, both here and in foreign countries, have their comparative miscarriages; and *Joan of Arc* is his weakest performance. Let us hope, and indeed expect, that he will bound and rise again.

*Covent Garden* has furnished a contrast in *Amilie*; and, instead of disappointing, has greatly surprised the town, by the production of one of the finest operas, if not, on the whole, the finest opera, in the English language, and by Mr. Rooke, a musician previously but little known to fame, though of considerable experience and practice. It is a masterly work, finely designed, and admirably executed, from the overture to the finale. In style it reminds us of Weber; but there is no imitation, no plagiarism: though of that school, the compositions are Mr. Rooke's own, and not more beautiful than they are original. The introduction of the sweet melodies which we attribute to the Tyrol (where the scene is laid), is a captivating charm, and the concerted pieces are as splendid as the simple airs and songs are delightful. Every evening since the first the music has gone on increasing in effect and popularity. Chamois hunters and gipsies are excellent elements for choruses, and they are as fine as any we ever heard. Miss Shirreff has several splendid pieces, to which she does ample justice; and Wilson and Phillips, not only in their separate songs, but in unison with her, are most delightful. Manvera has also some exquisite music, which he executes beautifully; and Miss P. Horton has a charming song, besides taking a fair share in the sextets, &c.; a praise which likewise belongs to Mr. Stretton. On the whole, the opera is one of the greatest hits of the English school, and its leading portions will soon be familiar to every street-musician, as well as to every musical party—the best tests of merited popularity.

On Tuesday, Her Majesty visited Drury Lane, and, on Thursday, Covent Garden Theatre, as a private individual. At the former her privacy was broken in upon; and she was drawn forth to have the national anthem sung, and receive the plaudits of the audience. At the latter, the orchestra played "God save the Queen;" but there were no stage infractions of Her Majesty's wish to enjoy the drama without being burdened herself with performing in the pomp of royalty. Surely, when such a desire is manifested by our sovereign, it is but proper and decorous to allow her to gratify her taste, without forcing her into a situation which repetition must render very fatiguing and annoying. We trust that the good sense of the public will be shewn in this respect; even by a restraint upon their loyal and affectionate feelings.

*Adelphi.*—Owing to a family loss, Mr. Power has been an absentee from this house during the week; and his place in *Rory O'More* supplied, on the spur of the moment, by Mr. Lyon, who deserves very great credit for the spirited imitation of his admirable original. Miss Shaw, who has taken Mrs. Yates's part, also acquits herself very successfully. A piece called *Victoire*, and representing the siege and sacking of Constantine, is chiefly indebted for its attraction to some beautiful scenery, and to the clever acting of Mdlle. Celeste, who performs a dumb character, and appears in the

garb of a smart hussar, and the disguise of an Arab minstrel.

*St. James's Theatre.*—A smart little drama, called *Wanted a Brigand*, has been produced here; and, with the combined exertions of Braham, Miss Rainsforth (one of our sweetest and most rising vocalists), and Miss Smith, in song, and the comic talent of Harley, with full scope for its exercise, has been deservedly successful. It bids fair to be long a popular attraction at this theatre.

#### VARIETIES.

*Whisky.*—It is surprising to observe how little malt whisky is imported into England from Scotland, the whole quantity being no more than 347,462 gallons! exceeding, by only 37,714 gallons, the amount annually consumed of that pernicious compound, "British Brandy." This discovery will, doubtless, mortify many, who, like ourselves, imagined that the Islay, or Glenlivet, they drank was the "pure malt" whisky the dealers announced it to be. The circumstance can be accounted for only by supposing that the English dealer knowingly purchases the inferior article, and charges his customers the price of the superior one; or, that the Scotch distillers pocket the price of the superior article, and supply the English dealers with the inferior one. However it may be, it is to be hoped that some spirit-dealers will take measures for procuring the best malt whisky from Scotland; and, if they act honestly, they will have no reason to complain of the want of public patronage.—*Statistical Journal.*

*Lunacy.*—That civilisation tends to increase the number of lunatics, was curiously illustrated in a paper read by Dr. Briere de Boismont to the Academy of Sciences at Paris, on the 9th ult.; the learned lecturer expressing his fears that the more the light of intelligence advanced, the more seriously would it be attended by this dark concomitant. Statistical tables seemed to establish this doctrine: for of 1049 lunatics received at the Bicêtre from 1808 to 1813, 114 had become mad through misfortunes, 99 from grief, 78 from ambition, 58 from sudden shocks of the mind, 55 from religion, 37 from love, 24 in consequence of political events, 20 in consequence of too severe education, and 49 from excessive occupation. After analysing these and other data belonging to the history of various nations, Dr. Briere demonstrated that the highest degree of alienation was developed among people the most enlightened; diminished under the influence of despotic governments, or in countries recently emancipated; and entirely disappeared among savages! In proof, he compared the number of idiots in the principal capitals with their population, &c. as follows:—

Capitals.	Populations.	Lunatics.	Proportion
London .....	1,400,000	7000	1 in 200
Paris .....	880,000	4000	1 in 222
St. Petersburg .....	377,046	120	1 in 3,133
Naples .....	364,000	479	1 in 759
Calro .....	330,000	14	1 in 30,714
Madrid .....	201,000	60	1 in 3,350
Rome .....	154,000	318	1 in 481
Milan .....	150,000	690	1 in 219
Turin .....	114,000	331	1 in 344
Florence .....	80,000	236	1 in 338
Dresden .....	70,000	150	1 in 466

The ratio, as it regarded the population of countries, confirmed this theory.

Countries.	Inhabitants.	Lunatics.	Proportion.
State of New York .....	1,617,459	2,240	1 in 721
England .....	13,700,000	16,322	1 in 783
Scotland .....	2,093,454	3,652	1 in 563
Norway .....	1,051,318	1,909	1 in 551
France .....	32,000,000	32,000	1 in 1000
Belgium .....	3,816,000	3,763	1 in 1014
Holland .....	2,302,000	2,300	1 in 1046
Italy .....	16,788,000	3,441	1 in 4679
Spain .....	4,085,366	569	1 in 7183

From all his premises, Dr. Briere contended that lunacy was an immediate consequence of civilisation itself.

*African Simplicity.*—Major H. Campbell, governor of Sierra Leone, has lately returned from that colony, where, during his residence, he exerted himself much in establishing friendly relations with many of the interior tribes that are scattered between that place and Timbuctoo. He has brought over with him no fewer than eight different letters of congratulation from so many different kings, addressed to his late majesty the King of England, and written in the Negro dialect of the Arabic. They have been translated by Mr. Rassam of Mosul, who came over with the Euphrates expedition to this country. "Praise be to God," say the correspondents of his majesty; "this letter is from Marwan, the king of Temain, to King William, whose country is England, and his village is London. I am in good health; I hope you are in the same happy condition," &c. The last-mentioned gentleman is now, we understand, exploring the oriental treasure of the Bodleian and other libraries, at Oxford. He finds no Chaldean books, and but few Syriac, chiefly theological MSS.; but we hope soon to give a fuller account of his researches.

*Translation of Homer's Iliad into Bengalee.*—A Bengalee translation of the first book of "Homer's Iliad," has been sent to us by the translator, Baboo Greeschunder Bose, and we are much pleased with the execution of the undertaking. The work is very well adapted for Bengalee students; and we hope that, in translating the remainder, the Baboo will be equally successful.—*Sambad Probhaker, April 5.*

*Weather Wisdom.*—Last week's predictions have been singularly accurate. For the next, "The weather is temperate about the 10th, as the sun is in aspect to Jupiter. A tendency to storms about the middle of the month. The 15th changeable and windy."

*Remarkable Tree!*—In the gardens of Lambeth Palace, the newspapers tell us, are two of the largest fig-trees known in England. "They cover a surface of upwards of fifty feet in height!! and forty in breadth," &c. &c. After this, a grenadier may be said to cover six feet six inches; and even a little fellow will cover five feet 2½ in height.

*Earthquake in Syria.*—Mr. Waghorn carried the December mail from Cairo to Coesede in the surprisingly short space of one day and a half, being only forty hours from Suet to Coesede, in small bungalow, and in half a gale of wind. A journey so rapid was never heard of before. Mr. Waghorn furnishes the following melancholy details of an earthquake in Syria.

January 1st, 1837.—An earthquake has caused in Sur the ruin of forty buildings of houses and warehouses; the remainder of the city is in the worst state; four Christians and seven Turks have perished. The wounded are fourteen in number, but out of danger.

January 5.—The village of Safed is entirely demolished, and only two per cent of its former inhabitants remain. The same sad fate has befallen Teberia.

January 6.—About the fourth part of Nazareth has been demolished; seventy souls were lost; the earth opened 112 feet in length, and one foot and a quarter in breadth, and then closed to about three-fourths of it. Twenty houses fell, from the same stroke, at Acre, and four persons perished. In Caifa, also, three buildings were demolished, but no one died.

January 7.—Two-thirds of Gish has been ruined by the earthquake, and the remaining part is in a bad state. Seventy souls perished whilst in church, at vesper; the curate and his son only escaped. Among the Turks, twenty-two persons were crushed, and a great portion bruised. In Kafr Baaran, wholly populated by Christians, few houses have been destroyed, and only five souls killed. The fourth part of Simata has been destroyed—four souls killed, two wounded. The half of Maalla has fallen; the other half remains in a ruined state; five souls only have perished. Advice from the 8th to the 11th January, give the following amount total of the damages occasioned by the above earthquake:—21 towns and villages, 527 houses and buildings, 552 persons, and 606 herds of cattle, perished under the rules of the same. The above miseries

and loss are all Mr. Waghorn had heard of, up to the date of his letter; but it was expected that the calamity was much greater than here stated.

#### LITERARY NOVELTIES.

We are glad to learn that the new and improved edition of Ruding's *Annals of the Coinage of Great Britain and its Dependencies*, completed to the present period, and so long announced by Mr. Hearne, is now about to appear in about Twenty-five parts, quarto, with a third volume consisting of about 150 Plates. The publisher accounts for the delay which has taken place, by attributing it to his anxiety to have the work rendered as full and perfect as possible. It is a great desideratum.—*Ed. L. G.*

#### In the Press.

Velpeau's *Anatomy of Regions*, translated from the French, with Notes, by Henry Hancock.—Characteristic Sketches of Young Gentlemen; forming the companion to the "Sketches of Young Ladies" by Quiz, Jun.; the Illustrations by Cruikshank.—The Wonders of Geology, with numerous Engravings, by J. Martin, from the Geological Discoveries of Dr. Mantell, in Tilgate Forest, by Gideon Mantell, Esq., LL.D.

#### TO CORRESPONDENTS.

In our last we fell into a mistake respecting Sir Graves Haughton: it is in the department of the French Institute called the Academy of Inscriptions and Belles Lettres, that our honoured countryman is the sole English member.

To be published Jan. 1.

Swainson on Menageries.

London: Longman and Co.; and John Taylor.

In 1 vol. 8vo. with Map and Twenty Plates, price 21s.  
**VISIT TO THE GREAT OASIS OF THE  
LIBYAN DESERT**, &c. &c.

By G. A. HOSKINS, Esq.

Author of "The Nile and Ethiopia."

"The author of this volume possesses all the enthusiasm of his  
class, and is entitled to a high place amongst them. His volume  
will interest the general reader by the light which it throws on  
the habits, condition, and character of a people whom few have  
visited; while the antiquarian and philosopher will thankfully  
acknowledge its valuable contributions to the cause of true his-  
tory and science."—*Eclectic Review*.  
London: Longman, Orme, and Co.

MRS. BRAY'S NEW NOVEL.

In 3 vols. post 8vo.

## TRELAWNY OF TRELAWNE; or, the

Prophecy. A Legend of Cornwall.

By Mrs. BRAY.

This book may be considered as a Grammar of Banking. The  
general reader may here acquire a competent knowledge of most  
of the facts and principles connected with the subject.  
London: Longman, Orme, and Co.

In 12mo., price 4s., a new edition of the Rev. Thomas Madsen's  
poem.

## THE SCHOOLBOY.

"In a poem abounding with so many rich passages as  
this work contains, we are almost at a loss to transfer portions of  
it to our pages; for, when we have gathered a few flowers, so  
many are left behind, that they even appear joveller, though re-  
maining unplucked, than those which we have culled. We cannot  
do better than recommend our readers to take a survey of this  
delightful garden, and all gather to please their fancies."  
"The 'Schoolboy' contains some of the graphic touches of  
Crabbe, the green stillness of a Clare, the religion of a Thomson,  
the perfect picturing of a Goldsmith, and the minute grouping of  
a Bloomfield."—*Literary Gazette*, October 1, 1835.

London: Longman and Co. To be supplied by Order, of every  
Bookseller in Town and Country.

In fcap 8vo., price 8s.

## ELECTRICITY: its Nature, Operation,

and Importance, in the Phenomena of the Universe.

By WILLIAM LEITCHHEAD,

Secretary to the London Electrical Society.

"This treatise exhibits the first attempt to call attention to the  
extraordinary relations between the electrical condition of the  
atmosphere and the human body; and it combines the spirit of  
rapid composition with the accuracy of cautious research—rigor  
and eloquence of expression with the strength of deep thinking."  
—*Atlas*.

"We heartily recommend Mr. Leitchhead's clever book to the  
notice of the scientific world."—*Sunday Times*.  
London: Longman, Orme, and Co.

In 1 vol. 8vo. 2d edition, with Alterations and Additions,

price 12s. cloth lettered.

## ELEMENTS OF PRACTICAL AGRICULTURE.

CULTURE; comprehending the Cultivation of Plants;  
the Husbandry of Domestic Animals; and the Economy of the  
Farm.

By DAVID LOW, Esq. F.R.S.E.

Professor of Agriculture in the University of Edinburgh.  
"Ought to be in every farmer's hands."—*New Farmer's Journal*,  
Dec. 4, 1817.

London: Longman and Co. Edinburgh: A. and C. Black.

Price 4s.

THE FAMILY HAND-BOOK; or,  
PRACTICAL INFORMATION IN DOMESTIC ECO-  
NOMY; including Cookery, Household Management, and all  
other subjects connected with the Health, Comfort, and Ex-  
penditure of a Family. With Choice Receipts, and Valuable  
Hints.

2. The Young Lady's Friend: a Manual of  
Practical Advice and Instruction to Young Females on their  
entering into the Duties of Life after quitting School. By a  
Lady. 8s. 6d.

3. Education and Treatment of Children.  
Mrs. Child's "Mother's Book," adapted to the use of Parents and  
Teachers. 8s. 6d.

4. Thoughts of a Parent on Education. By  
the late Mrs. Richard Trench. With a Preface and Notes, by the  
Editor. 1s. 6d.

London: John W. Parker, Publisher, West Strand.

Price 1s. with gilt leaves, a Second Series of

## THE REV. W. LISLE BOWLES

LITTLE VILLAGERS' VERSE BOOK.

"This is one of the sweetest and best little publications in the  
English language."—*Editor of the Literary Gazette*.

"The Rev. W. A. Bowles, who has powers to interest the  
most manly intellects, has not thought it beneath him, like the  
excellent Dr. Watts, to accommodate his mind to the under-  
standing of children, and has published a little book of moral and  
religious verses, such as a child may easily learn by rote. They  
are worthy to be learned by heart."—*Editor of the Times*.

To be had of Messrs. Simpkin and Marshall, Stationers' Hall  
Court, and all other Booksellers.

In 1 vol. price only 8s. 6d.

## THE NEW LATIN GRAMMAR.

In which that popular Introduction to the Latin Tongue  
is rendered into English, and the Accidence, the Syntax, and  
the Prosody are retained in the form in which they are used at  
Eton; with much additional matter to the Text; comprising  
also, General Questions on the Accidence, a Latin Phrase, Rule  
of Construction, Directions for the Translator, Roman Mode of  
reckoning Time and Money, &c.; together with copious and  
easy Explanatory Notes, Philosophical as well as Practical. De-  
dicated to the Rev. Thomas Knox, D.D. Master of Temple  
School.

By CLEMENT MOODY, one of the Junior Masters.  
Published by Smith, Elder, and Co. Cornhill, London; R.  
Hall, Tunbridge; Oliver and Boyd, Edinburgh; and J. Cam-  
pling, Dublin.

## CHURCH AND UNIVERSITY AFFAIRS.

The following, among other important Subjects, are discussed in the December Number of

# THE BRITISH MAGAZINE, and Monthly Register of Religious and Ecclesiastical Information.

On Innovations attributed to Clergymen in or near Oxford; in a Letter from Dr. Fussy to the Rev. G. Townsend; The Rev. H. R. Maidland on Fox's Acts and Monuments—Validation of the Universities—Schism—Tithes Commutation Act—Registration Bills—Publication of Manns—Apostolic Succession—The Dublin Record—The Irish National System of Education—Amalgamation System—The Fifth of November—Church Rates—England and France—Exhibition of the Bones of St. Valentine in Dublin—Confirmation—Uniformity of Practice—The Ecclesiastical Historians. It contains also, Correspondence—Sacred Poetry—Reviews of New Books—Miscellaneous—Documents—Events of the past Month throughout the United Kingdom—Church Statistics—and its usual varied Matter relating to Church Affairs.  
J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall; J. Turrill, 850, and T. Clerc Smith, 287 Regent Street.

Mr. Courthope's improved Editions of Debreitt's Peerage and Baronage.

## DEBRETT'S COMPLETE PEERAGE of the UNITED KINGDOM of GREAT BRITAIN and IRELAND.

Edited by WILLIAM COURTHOPE, Esq.  
The Twenty-first edition, with Additions, price 11. 5s.  
Debreitt's Baronage of England, with Alphabetical Lists of such Baronets as have merged in the Peerage, or have become extinct; and also of the existing Baronets of Nova Scotia and Ireland. By the same Editor. The 7th edition, with Additions, price 11. 5s.

These two works are elegantly and uniformly printed, and are brought down to the present year. The Arms are engraved in a very superior manner, from Drawings by Harvey.  
London: Printed for J. G., and F. Rivington; J. and W. T. Clarke; Longman and Co.; T. Cadell; John Richardson; J. M. Richardson; Baldwin and Cradock; S. Bagster; J. Booth; Hatchard and Son; R. S. Taylor; H. Smith and Co.; Sherwood and Co.; Simpkin and Co.; Allen and Co.; E. Hodgson; Booker and Co.; J. Hearne; W. Pickering; T. and W. Boone; Houlston and Son; and J. Templeman.

### INFANT SCHOOLS.

In 18mo. price 4s. 6d. boards, the 3d edition of  
**A COURSE OF LESSONS**, together with the Tunes to which they are usually sung in Infant Schools; and also a copious Collection of Hymns and Moral Songs, suitable for Infant Instruction, either in Schools or in Private Families.  
Printed for J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

In 12mo. price 7s. boards, the 5th edition, revised and corrected, of  
**PATRIARCHAL TIMES; or, the Land of Canaan.** In Seven Books; comprising interesting Events, Incidents, and Characters, founded on the Holy Scriptures.  
By MISS O'KEEFE.  
Printed for J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

In 8vo. price 10s. 6d. only, half-bound,  
**A NEW ATLAS OF CLASSICAL GEOGRAPHY**; containing Twenty-two Maps, coloured in Outline. With a complete Index.

By the Rev. J. F. BEAN, M.A.  
One of the Masters of St. Paul's School.  
Clearness and simplicity of arrangement are the leading features of the present work, which has been compiled from the most recent and accredited authorities, upon the plan of affording to the student the greatest facility of reference to every remarkable place mentioned in classical literature. In addition to the usual Maps, one upon a large scale has been inserted, describing the route of the Retreat of the Ten Thousand, and the Marches of Alexander the Great.  
Printed for J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

In a pocket volume, price 5s. 6d. in boards,  
**ANCIENT HYMNS from the ROMAN BREVIARY**, for Domestic Use, arranged for every Morning and Evening of the Week, and especially for the Holy-days of the Church. With some Original Hymns on the Church's Ordinances.  
By the Right Rev. RICHARD MANT, D.D. M.R.I.A.  
London: Printed for J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Price 5s. bound in roan, with a clasp, the 4th edition of  
**SPECULUM GREGIS; or, Parochial Minister's Assistant.**

By a COUNTRY CURATE.  
"He understands best the nature and obligations of the priestly office, who thinks he has discharged it by performing the public appointments."—*Bishop Burnet*.  
"The readiest way of finding access to a man's heart 'is to go into his house.'—*Chalmers' Christian and Civic Economy*.  
Printed for J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

## THE PENNY SUNDAY READER.

The Sixth Volume (for July to December, 1837), is just published, price 3s. 9d. in cloth boards. The Work is continued in Weekly Numbers, and forms a cheap Manual of Sunday Reading, adapted to the sacred character of the Lord's Day, especially connected with its devotional offices. It contains, also, Miscellaneous Papers, Sacred Poetry, original and selected, Choice Extracts from Eminent Divines, and Communications from Correspondents.  
Rivingtons, St. Paul's Churchyard, and Waterloo Place; and sold by all Booksellers.

In 8vo. price 5s. in boards,  
**A COURSE OF PLAIN SERMONS**, on the Ministry, Doctrine, and Services of the Church of England. With a Preface, and occasional Notes.  
By the Rev. FRANCIS FULFORD, A.B.  
Rector of Trowbridge, Wilts, and late Fellow of Exeter College, Oxford.  
Printed for J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

In 12mo. with Three Woodcuts by Cruikshank, price 2s. 6d. in boards, the 4th edition of  
**CHRISTMAS STORIES.** Containing John Wildgoose, the Poacher; the Smuggler; and Good Nature, or Parish Matters.  
Printed for J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

In 8vo. price 10s. 6d. in boards, the 3d edition of  
**SERMONS.**  
By HENRY MELVILL, B.D.  
Minister of Camden Chapel, Camberwell, and late Fellow and Tutor of St. Peter's College, Cambridge.  
Printed for J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.  
Also, by the same Author,  
**Sermons preached before the University of Cambridge**, in 1836 and 1837. Price 5s. each Volume.

**NEW WORKS** just published by Richard Bentley, New Burlington Street, Publisher in Ordinary to Her Majesty.

I.

## THE BOOK of GEMS: 1838.

The Modern Poets and Artists of Great Britain.  
Edited by S. C. HALL.  
With Biographical Notices and Plates of Autographs.  
"A more elegant and useful 'Present Book,' can hardly be imagined."—*United Service Journal*.  
"As a whole, the book is splendid."—*Athenaeum*.  
"It is, in truth, a book of Gems."—*Sunday Times*.  
"The Engravings are really admirable."—*Examiner*.  
N.B. The name of J. M. V. Turner, Esq. R.A. has been inadvertently attached to the exquisite little Vignette engraved by Miller, entitled "Sun-rise," and appended to Scott's poem; but it now appears that this gem was engraved from a painting by A. B. Johns, Esq. which had been long considered as an early production of the first-named celebrated artist. The Publishers much regret that this mistake should have occurred, for, whatever the beauty of the painting, they would of course never intentionally have put that eminent artist's name to a production that was not his.  
Whittaker and Co., Ave Maria Lane, London.

Dedicated by special permission, to Her Most Gracious Majesty Queen Victoria, a new and improved edition of the  
**ANNALS of the COINAGE of GREAT BRITAIN**, and its dependencies.

By the late Rev. ROGERS RUDING, B.D.  
Comprising Descriptions and Engravings of many of the finest productions of the National Mint. The works of the distinguished Artists employed at that Royal Establishment, during the reign of George the 4th, and of his late Majesty, remain to be added to the interesting Medallist Series, illustrative of our Political and Commercial History. Also, the New Coinage, in preparation at the Mint, of Her Majesty the Queen (who has most graciously condescended to honour the work with her Royal Patronage), will complete its illustrations.  
Besides these additions, a considerable number of Types of Coins, hitherto unpublished, will be introduced. Many curious specimens of the coinage attributed to the Ancient Britons, existing in the National Museum, and in private cabinets, will be supplied to the former list, and engraved with minute care. In the department of Saxon Coins, the present edition will be particularly rich and interesting, in consequence of the possessor of a collection, considered the finest in the kingdom, having most handsomely promised to furnish for illustration, numerous types, many of which have been recently discovered, and were before wholly unknown. From several other sources, also, very important assistance will be derived.  
To be published in Twenty-five monthly Parts, as nearly as can be computed, price 5s. each part, containing the due proportion of Letter-press and Plates, till the whole is completed.  
Part to appear on the 1st of January, 1838.  
London: John Hearne, 81 Strand.

2d edition, with Maps and other Illustrations, 8vo. 12s.

## REVIEW OF NEW BOOKS.

*The History of the Reign of Ferdinand and Isabella, the Catholic, of Spain.* By W. H. Prescott. 3 vols. 8vo. London, 1838. Bentley.

THIS remarkable and important work is the production of an American; and there is singular fitness that it should be the task of one whose country was, as it were, called into existence during the very age he depicts. Mr. Prescott has chosen one of the most important periods in modern history, and one, too, which exercised the greatest control over succeeding times. The foundations of power and influence were then laid; and it is curious to note the germs of after consequences in the great occurrences of the day. It was an age of great events and of great men. Henry VII., despite of the avarice which narrowed his views, was one of the most efficient monarchs that ever held the English sceptre. The same may be said of Louis XI. who, with all his faults, pursued that wise system which secured the then uncertain materials of French power. Ferdinand was in no way behind his royal contemporaries, and added a military genius of a high order. These three monarchs set their stamp upon their time. All three were false and crafty—and of how crafty and small a kind are the intrigues that make so large a portion of the history of the period! Isabella's mind was of a far higher nature. Conscientious, benevolent, far more enlightened in her views than her husband, she is rightly termed in these pages "his good genius." Mr. Prescott institutes a very well written parallel between Isabella of Spain and Elizabeth of England. He casts up the balance much in favour of the former. Now, as far as regards the amiable qualities, we entirely agree with him. As Hume justly observes, a man would have hesitated to choose Elizabeth as a mistress or as a wife; while Isabella possessed all the kinder and more engaging qualities. But if we look, as is the object of the historian, to the public character, Elizabeth had far more commanding talents than the Spanish queen. Isabella's mind was tinged by one prevailing weakness, and the effects of her fatal superstition were of evil consequence in Spain. With the Moors were extirpated, to a great degree, refinement, literary taste, and civilisation, which left their conquerors far behind. With the Jews went the whole spirit of industry and commercial enterprise; and to the age now painted may be traced the bigotry which has rendered one of the finest countries in Europe enervate, oppressed, and uncultivated. We must now, however, make some selection—no easy matter amid such abundance of material; but the romantic circumstances of Isabella's union cannot be omitted, especially as so much interest now attaches to a royal and female marriage.

"While these affairs were in progress, Isabella's situation was becoming extremely critical. She had availed herself of the absence of her brother and the Marquis de Villena in the south, whither they had gone for the purpose of suppressing the still lingering spark of insurrection, to transfer her residence from

Ocaña to Madrigal, where, under the protection of her mother, she intended to abide the issue of the pending negotiations with Aragon. Far, however, from escaping the vigilant eye of the Marquis of Villena by this movement, she laid herself more open to it. She found the Bishop of Burgos, the nephew of the marquis, stationed at Madrigal, who now served as an effectual spy upon her actions. Her most confidential servants were corrupted, and conveyed intelligence of her proceedings to her enemy. Alarmed at the actual progress made in the negotiations for her marriage, the marquis was now convinced that he could only hope to defeat them by resorting to the coercive system which he had before abandoned. He accordingly instructed the Archbishop of Seville to march at once to Madrigal, with a sufficient force, to secure Isabella's person, and letters were at the same time addressed by Henry to the citizens of that place, menacing them with his resentment if they should presume to interpose in her behalf. The timid inhabitants disclosed the purport of the mandate to Isabella, and besought her to provide for her own safety. This was, perhaps, the most critical period in her life. Betrayed by her own domestics, deserted even by those friends of her own sex, who might have afforded her sympathy and counsel, but who fled affrighted from the scene of danger, and on the eve of falling into the snares of her enemies, she beheld the sudden extinction of those hopes which she had so long and so fondly cherished. In this exigency she contrived to convey a knowledge of her situation to Admiral Henriquez and the Archbishop of Toledo. The active prelate, on receiving the summons, collected a body of horse, and, reinforced by the admiral's troops, advanced with such expedition to Madrigal, that he succeeded in anticipating the arrival of the enemy. Isabella received her friends with unfeigned satisfaction, and, bidding adieu to her dismayed guardian, the Bishop of Burgos, and his attendants, she was borne off by her little army, in a sort of military triumph, to the friendly city of Valladolid, where she was welcomed by the citizens with a general burst of enthusiasm. In the meantime, Gutierrez de Cardenas, one of the household of the princess, and Alphonso de Palencia, the faithful chronicler of these events, were despatched into Aragon, in order to quicken Ferdinand's operations during the auspicious interval afforded by the absence of Henry in Andalusia. On arriving at the frontier town of Osma, they were dismayed to find the bishop of that place, together with the Duke of Medina Celi, on whose active co-operation they had relied for the safe introduction of Ferdinand into Castile, had been gained over to the interests of the Marquis of Villena. The envoys, however, adroitly concealing the real object of their mission, were permitted to pass unmolested to Saragossa, where Ferdinand was then residing. They could not have arrived at a more inopportune season. The old King of Aragon was in the very heat of the war against the insurgent Catalans headed by the victorious John of Anjou. Although so sorely pressed, his forces were on the eve of disbanding for want of the requisite

funds to maintain them: his exhausted treasury did not contain more than three hundred enriques. In this exigency he was agitated by the most distressing doubts. As he could spare neither the funds nor the force necessary for covering his son's entrance into Castile, he must either send him unprotected into a hostile country, already aware of his intended enterprise and in arms to defeat it, or abandon the long-cherished object of his policy at the moment when it was ripe for execution. Unable to extricate himself from this dilemma, he referred the whole matter to Ferdinand and his council. It was at length determined that the prince should undertake the journey, accompanied by half a dozen attendants only, in the disguise of merchants, by the direct route of Saragossa; while another party, in order to divert the attention of the Castilians, should proceed in a different direction, with all the ostentation of a public embassy from the King of Aragon to Henry IV. The distance was not great which Ferdinand and his suite were to travel before reaching a place of safety; but this intervening country was patrolled by squadrons of cavalry for the purpose of intercepting their progress; and the whole extent of the frontier, from Almazan to Guadalajara, was defended by a line of fortified castles in the hands of the family of Mendoza. The greatest circumspection, therefore, was necessary. The party journeyed chiefly in the night; Ferdinand assumed the disguise of a servant, and when they halted on the road, took care of the mules, and served his companions at table. In this guise, with no other disaster except that of leaving at an inn the purse which contained the funds for the expedition, they arrived late on the second night at a little place called the Burgo, or Borough of Osma, which the Count of Treviño, one of the partisans of Isabella, had occupied with a considerable body of men-at-arms. On knocking at the gate, cold and faint with travelling, during which the prince had allowed himself to take no repose, they were saluted by a large stone discharged by a sentinel from the battlements, which, glancing near Ferdinand's head, had well nigh brought his romantic enterprise to a tragical conclusion; when his voice was recognised by his friends within, and the trumpets proclaiming his arrival, he was received with great joy and festivity by the count and his followers. The remainder of his journey which he commenced before dawn, was performed under the convoy of a numerous and well-armed escort; and on the 9th of October he reached Dueñas, in the kingdom of Leon, where the Castilian nobles and cavaliers of his party eagerly thronged to render him the homage due to his rank. The intelligence of Ferdinand's arrival diffused universal joy in the little court of Isabella at Valladolid. Her first step was to transmit a letter to her brother Henry, in which she informed him of the presence of the prince in his dominions, and of their intended marriage. She excused the course she had taken by the embarrassments in which she had been involved by the malice of her enemies. She represented the political advantages of the connexion, and the sanction it had received from the Castilian nobles; and she concluded with

soliciting his approbation of it, giving him at the same time affectionate assurances of the most dutiful submission both on the part of Ferdinand and herself. Arrangements were then made for an interview between the royal pair, in which some courtly parasites would fain have persuaded their mistress to require some act of homage from Ferdinand, in token of the inferiority of the crown of Aragon to that of Castile; a proposition which she rejected with her usual discretion. Agreeably to these arrangements, Ferdinand, on the evening of the 15th of October, passed privately from Dueñas, accompanied only by four attendants, to the neighbouring city of Valladolid, where he was received by the Archbishop of Toledo, and conducted to the apartment of his mistress. Ferdinand was at this time in the eighteenth year of his age. His complexion was fair, though somewhat bronzed by constant exposure to the sun; his eye quick and cheerful; his forehead ample, and approaching to baldness; his muscular and well-proportioned frame was invigorated by the toils of war, and by the chivalrous exercises in which he delighted. He was one of the best horsemen in his court, and excelled in field sports of every kind. His voice was somewhat sharp, but he possessed a fluent eloquence; and when he had a point to carry, his address was courteous and even insinuating. He secured his health by extreme temperance in his diet, and by such habits of activity, that it was said he seemed to find repose in business. Isabella was a year older than her lover. In stature she was somewhat above the middle size. Her complexion was fair; her hair of a bright chestnut colour, inclining to red; and her mild blue eye beamed with intelligence and sensibility. She was exceedingly beautiful: 'The handsomest lady,' says one of her household, 'whom I ever beheld, and the most gracious in her manners.' The portrait, still existing of her in the royal palace, is conspicuous for an open symmetry of features, indicative of the natural serenity of temper, and that beautiful harmony of intellectual and moral qualities, which most distinguished her. She was dignified in her demeanour, and modest even to a degree of reserve. She spoke the Castilian language with more than usual elegance; and early imbibed a relish for letters, in which she was superior to Ferdinand, whose education in this particular seems to have been neglected. It is not easy to obtain a dissipated portrait of Isabella. The Spaniards, who revert to her glorious reign, are so smitten with her moral perfections, that, even in depicting her personal, they borrow somewhat of the exaggerated colouring of romance. The interview lasted more than two hours, when Ferdinand retired to his quarters at Dueñas as privately as he came. The preliminaries of the marriage were first adjusted, however; but so great was the poverty of the parties, that it was found necessary to borrow money to defray the expenses of the ceremony. Such were the humiliating circumstances attending the commencement of a union destined to open the way to the highest prosperity and grandeur of the Spanish monarchy!"

We must add to this the summing up of the qualities of Cardinal Ximenes.

"He now turned his thoughts to his approaching end. Death may be supposed to have but little terrors for the statesman who in his last moments could aver, 'that he had never intentionally wronged any man: but had rendered to every one his due, without being swayed, as far as he was conscious, by fear or affection.' Yet Cardinal Richelieu on

his death-bed declared the same. As a last attempt, he began a letter to the king. His fingers refused, however, to perform their office, and, after tracing a few lines, he gave it up. The purport of these seems to have been to recommend his university at Alcalá to the royal protection. He now became wholly occupied with his devotions, and manifested such contrition for his errors, and such humble confidence in the Divine mercy, as deeply affected all present. In this tranquil frame of mind, and in the perfect possession of his powers, he breathed his last, November 8th, 1617, in the eighty-first year of his age, and the twenty-second since his elevation to the primacy. The last words that he uttered, were those of the Psalmist, which he used frequently to repeat in health, 'In te, Domine, speravi,'—'In thee, Lord, have I trusted.' His body, arrayed in his pontifical robes, was seated in a chair of state, and multitudes of all degrees thronged into the apartment to kiss the hands and feet. It was afterwards transported to Alcalá, and laid in the chapel of the noble college of San Ildefonso, erected by himself. His obsequies were celebrated with great pomp, contrary to his own orders, by all the religious and literary fraternities of the city; and his virtues commemorated in a funeral discourse by a doctor of the university, who, considering the death of the good a fitting occasion to lash the vices of the living, made the most caustic allusion to the Flemish favourites of Charles, and their pestilent influence on the country. Such was the end of this remarkable man; the most remarkable, in many respects, of his time. His character was of that stern and lofty cast which seems to rise above the ordinary wants and weaknesses of humanity. His genius, of the severest order, like Dante's or Michael Angelo's in the regions of fancy, impresses us with ideas of power, that excite admiration akin to terror. His enterprises, as we have seen, were of the holdest character: his execution of them equally bold. He disdained to woo fortune by any of those soft and pliant arts which are often the most effectual. He pursued his ends by the most direct means. In this way he frequently multiplied difficulties; but difficulties seemed to have a charm for him, by the opportunity they afforded of displaying the energies of his soul. With these qualities he combined a versatility of talent usually found only in softer and more flexible characters. Though bred in the cloister, he distinguished himself both in the cabinet and the camp; for the latter, indeed, so repugnant to his regular profession, he had a natural genius, according to the testimony of his biographer; and he evinced his relish for it by declaring, that 'the smell of gunpowder was more grateful to him than the sweetest perfume of Arabia.' In every situation, however, he exhibited the stamp of his peculiar calling; and the stern lineaments of the monk were never wholly concealed under the mask of the statesman, or the visor of the warrior. He had a full measure of the religious bigotry which belonged to the age; and he had melancholy scope for displaying it, as chief of that dread tribunal over which he presided during the last ten years of his life. He carried the arbitrary ideas of his profession into political life. His regency was conducted on the principles of a military despotism. It was his maxim, that 'a prince must rely mainly on his army for securing the respect and obedience of his subjects.' It is true he had to deal with a martial and factious nobility, and the end which he proposed was to curb their licentiousness,

and enforce the equitable administration of justice; but, in accomplishing this, he shewed little regard to the constitution, or to private rights. His first act, the proclaiming of Charles king, was in open contempt of the usages and rights of the nation. He evaded the urgent demands of the Castilians for a convocation of Cortes; for it was his opinion, 'that freedom of speech, especially in regard to their own grievances, made the people insolent and irreverent to their rulers.' The people, of course, had no voice in the measures which involved their most important interests: his whole policy, indeed, was to exalt the royal prerogative at the expense of the inferior orders of the state; and his regency, short as it was, and highly beneficial to the country in many respects, must be considered as opening the way to that career of despotism which the Austrian family followed up with such hard-hearted constancy. But, while we condemn the politics, we cannot but respect the principles, of the man. However erroneous his conduct in our eyes, he was guided by his sense of duty. It was this, and the conviction of it in the minds of others, which constituted the secret of his great power: it made him reckless of difficulties, and fearless of all personal consequences. The consciousness of the integrity of his purposes rendered him, indeed, too scrupulous as to the means of attaining them. He held his own life cheap, in comparison with the great reforms that he had at heart. Was it surprising that he should hold as lightly the convenience and interests of others, when they thwarted their execution? His views were raised far above considerations of self. As a statesman, he identified himself with the state; as a churchman, with the interests of his religion. He severely punished every offence against these: he as freely forgave every personal injury. He had many remarkable opportunities of shewing this. His administration provoked numerous lampoons and libels. He despised them, as the miserable sales of spleen and discontent, and never persecuted their authors. In this he formed an honourable contrast to Cardinal Richelieu, whose character and condition suggest many points of resemblance with his own. His disinterestedness was further shown by his mode of dispensing his large revenues. It was among the poor, and on great public objects. He built up no family. He had brothers and nephews; but he contented himself with making their condition comfortable, without diverting to their benefit the great trusts confided to him for the public. The greater part of the funds which he left at his death was settled on the university of Alcalá. He had, however, none of that pride which would make him ashamed of his poor and humble relatives. He had, indeed, a confidence in his own powers approaching to arrogance, which led him to undervalue the abilities of others, and to look on them as his instruments rather than his equals; but he had none of the vulgar pride founded on wealth or station. He frequently alluded to his lowly condition in early life with great humility, thanking Heaven, with tears in his eyes, for its extraordinary goodness to him. He not only remembered, but did many acts of kindness to his early friends, of which more than one touching anecdote is related. Such traits of sensibility, gleaming through the natural austerity and sternness of a disposition like his, like light breaking through a dark cloud, affect us the more sensibly by contrast. He was irreproachable in his morals, and conformed literally to all the rigid ex-

tions of his severe order, in the court as faithfully as in the cloister. He was sober, abstemious, chaste. In the latter particular he was careful that no suspicion of the license which so often soiled the clergy of the period should attach to him. On one occasion, while on a journey, he was invited to pass the night at the house of the Duchess of Maqueda, being informed that she was absent. The duchess was at home, however, and entered the apartment before he retired to rest. 'You have deceived me, lady,' said Ximenes, rising in anger; 'if you have any business with me, you will find me to-morrow at the confessional.' So saying, he abruptly left the palace. He carried his austerities and mortifications so far as to endanger his health. There is a curious brief extant of Pope Leo the Tenth, dated the last year of the cardinal's life, enjoining him to abate his severe penance, to eat meat and eggs on the ordinary fasts, to take off his Franciscan frock, and sleep in linen and on a bed. He would never consent, however, to divest himself of his monastic weeds. 'Even laymen,' said he, alluding to the custom of the Roman Catholics, 'put these on when they are dying; and shall I, who have worn them all my life, take them off at that time?' Another anecdote is told in relation to his dress. Over his coarse woollen frock he wore the costly apparel suited to his rank. An impertinent Franciscan preacher took occasion one day before him to launch out against the luxuries of the time, especially in dress, obviously alluding to the cardinal, who was attired in a superb suit of ermine, which had been presented to him. He heard the sermon patiently to the end, and after the services were concluded, took the preacher into the sacristy, and, having commended the general tenor of his discourse, shewed, under his furs and fine linen, the coarse frock of his order, next his skin. Some accounts add, that the friar, on the other hand, wore fine linen under his monkish frock. After the cardinal's death, a little box was found in his apartment, containing the implements with which he used to mend the rents of his threadbare garment, with his own hands."

Too much credit cannot be given to Mr. Prescott for the manner in which he has executed his laborious and important task. No reader but will be touched by the simple manner in which he alludes to its temporary suspension. The work is, however, now complete; and the valuable history is one without which no historical library can be complete.

*Jane Lomax; or, a Mother's Crime.* By the Author of "Brambletye House," "Reuben Apsley," &c. 3 vols. 12mo. London, 1838. Colburn.

In some cases how difficult it is to disconnect an author and his works. How impossible it is, for example, to open one of his books, and not recall that the pleasant and gentleman-like writer is Mr. Horace Smith. Few men have ever been more socially popular, or more deservedly so,—his friends owe him how many pleasant hours, and not a few kind actions. This is, we own, a digression; but the public do take, and have a right to take, an interest in a man who has for years contributed to their amusement. *Jane Lomax*, the novel now before us, is, without question, Mr. Smith's most attractive production. There is the same polished style, the same high moral tone, that distinguished its predecessors; but the characters are more vividly drawn, and the narrative much more dramatic. *Jane Lomax* is a very interesting story, whose ideas are novel,

and worked out with great spirit. The character of the mother, a domestic Lady Macbeth, but led into crime by the means of her best affections, is as bold as it is new; and it is well sustained to the last. The husband, a sketch in water-colours, is equally true; and there is a grace and sweetness in the picture of Benjamin that belong to poetry. We must give a portion of the striking scene in which the will of the old German is destroyed. He is on his death-bed, attended by Jane Lomax, wife to his clerk.

"No sooner had she taken her station by the bed-side, than the sick man, rousing from his feigned slumber, said in a whisper, 'Dat is you, mine goot Mrs. Lomax—I know your voodsteb; is dere nobody else in de room?' An answer was given in the negative. 'Den lock de door,' he continued, 'and bring me de gandle.' She did as she was directed, and Hoffman, fumbling under his pillow and drawing out the will, attempted to read it, but his eye-sight, which had been latterly failing him, was now so defective that he could not succeed, and he handed it over to Mrs. Lomax, saying, with a groan, 'de gursed dogtor's stuff has quite spoiled mine eye-sight, so read it to me, read it to me, mine goot voman, but bromise me you will not tell de condends to nobody, bromise me as you are a goot Christian, and fain you read, do not speak doo loud.' She gave the required pledge, and proceeded to read the will, which was very short, the whole of his property being devised, as we have already stated, to his nephew, Edward Ruddock. 'Very goot, very goot,' he exclaimed, when she had concluded; 'bot der is a little godicil what you will like; read it, read it.' By this addition, which seemed to have been recently made, and was all in his own hand-writing, he bequeathed a legacy of two hundred pounds to his faithful clerk, Joel Lomax, who was also appointed one of his executors. The wife expressed her warmest gratitude for this unexpected remembrance, and the sick man, muttering, 'goot, goot, dis will make you comfortable in your old age—I will egsecute it do-morrow,' again thrust the will under his pillow, and composed himself to sleep."

Jane Lomax takes the will, her husband copies it, substituting his own name: the false document is placed under the old man's pillow, and the following scene ensues:—

"Lomax asked in what way they should dispose of the original will. 'It must be immediately destroyed,' was the reply; 'there is a fire in the kitchen; we will commit it forthwith to the flames.' 'Who is to burn it?' asked the husband, recoiling with a fresh horror from every new step in the enterprise. 'Joel, as we are to share equally the benefits of this act, we will be partners in every particular of its execution. You shall not hereafter claim the merit of having made my fortune, nor will I assume the praise of having showered riches upon your head. Our coming aggrandisement shall be our own joint and equal deed. Take off your shoes; accompany me, without noise, to the kitchen, and we will, together, destroy the only evidence that can prevent the success of our enterprise.' Although the determined look and calm confidence of her air assumed not the language, it produced the effect of a command upon the ductile and irresolute mind of her auditor, who took off his shoes in silent obedience, and stole tremblingly after her, until they reached the bottom of the stairs, where his companion observed that, as there were only iron bars, and no shutters to the window, it would be safer to leave the candle behind them

when they entered the kitchen. They did so accordingly, and, drawing the door after them, were crossing the floor, when a gleam of lightning, emitted by the receding clouds, irradiated for a moment the whole apartment. Clinging in agitation to his wife, Lomax staggered in her ear as he drew her back: 'Stop—stop! I saw a ma—a ma—a man at the window!—a tall, thin man, with a low-crowned hat.' 'A man! impossible! who would let himself down into the area on such a night as this? Your fears have conjured up this phantom. However, we must not run any risks. Man or devil, he shall not long remain undiscovered.' So saying, she unbolted the window, softly raised the sash, and, leaning her head against the bars, was enabled to ascertain that there was no intruder or eaves-dropper in the area. 'As I suspected,' she said, again closing and fastening the window, 'your terrors have seen more than your eyes. Had I such a chicken heart as yours, we should stand little chance of accomplishing our object, and our darling Benjamin—' 'Indeed, dear Jane,' hesitated the husband, 'I could almost wish—that is, if you agree with me—that we had never undertaken it. I could swear that I saw a man in the area! A tall, thin man, with—' 'And I could almost swear that you are besotted with the cordial that you have swallowed. What makes you tremble thus? For shame! for shame! have you not one particle of manhood in your craven heart?' 'The bravest may tremble at guilt, and I am only astonished that you can be so perfectly calm and collected. Dear Jane, it is not yet too late to recede, but if the will be once destroyed—' 'Look you, Joel, I am not a person to be trifled with, nor to be frightened by bugbears from a resolution that I have once deliberately formed. We have gone too far in this matter to stop short, nor am I so weak and pusillanimous, woman as I am, as to lose the glorious prize when it is within my reach. I will do my duty to my dear boy, ay, and so shall you. You must not, nay, you *shall* not, flinch from your purpose. What! still peering with a timid eye at the window? Well, I will remove all your doubts and fears. Behold! I place this screen upon the dresser; and now, if there were a dozen men in the area, not one of them could catch a glimpse either of us or our proceedings.' Suiting the action to her words, she effectually blocked up the window; and then, hurrying to the fire, thrust the will between the bars. As the paper rapidly disappeared, a bright flame arose, throwing a vivid, but momentary, radiance on two countenances of very opposite expression; that of the wife being flushed and animated with the anticipation of success, and the certainty that they had now gone too far to recede; while the husband, as he stood aghast, with open mouth and distended eyes, appeared to be transfixed and stupified by the fearful responsibility of the deed which he had never heartily approved, although he had wanted the resolution to prevent it."

The locale of this novel is perfectly untrudened ground; but we recommend our readers to accompany Mr. Smith to what he calls "the unromantic purlieus of Bermondsey and Shad Thames." He has made them attractive.

*The Life and Times of Louis XIV.* By G. P. R. James, Esq., author of "Richelieu," &c. 2 vols. 8vo. London, 1837. Bentley. We do not purpose entering into any critical examination of this work till it be further advanced. The two volumes now before us contain the minority of Louis XIV., or, rather, that earlier portion occupied by the Fronde.

Mr. James shews his usual industry and research, though we confess that we differ in some of his estimates of character. But we shall reserve our opinions till we can give them of the whole. In the mean time, we take two extracts, truly illustrative of that unsettled time: a time of which no account can be uninteresting, and of which an account from the pen of such a writer as Mr. James must be peculiarly acceptable.

*Marshal Fabert.*—"An anecdote is told of the famous *Maréchal de Fabert*, which gives a strange picture of the exploits wherewith the young nobility of France occasionally amused themselves. Fabert, in returning to the court after having executed some mission of importance, was stopped at Clermont en Beauvoisis by the want of post-horses, and went to bed to take some repose while the means of proceeding on his journey were sought for. He kept a light burning in his chamber; and, about two o'clock in the morning, two young officers in the French service, the Count de Rantzau and Monsieur de Quesnai, entered the room in which he was sleeping, for the express purpose of annoying a stranger. Woke by an extraordinary noise, Fabert looked up and beheld two gentlemen dancing as hard as they could in the middle of the room. 'Gentlemen,' exclaimed the marshal, 'you know, I trust, how to behave yourselves!—this room is mine; there are others in the hotel, and I beg you would make use of them.' 'Sir,' replied the count, 'sleep if you can; for my part, I only wish to amuse myself:' and seeing that Fabert, enraged, was starting out of bed, he burst out into a violent fit of laughter, exclaiming, 'The matter is serious: Monsieur takes to his slippers!' Fabert, now losing all patience, snatched up his sword and fell upon them; but Rantzau and Quesnai drawing also, got him between them; so that, as soon as he lunged at one, he was exposed to the other: thus he was wounded in fourteen places before any one came to his assistance. At length, however, the noise brought the whole household into the room, and Quesnai, who was nearest the door, was instantly disarmed: at the same moment, Fabert sprang upon Rantzau, threw him on the ground, and, holding his sword to his throat, exclaimed, 'What is your name, villain? Demand your life, or you die!' As he answered nothing, however, the master of the house cried out, 'Hold, hold, Monsieur Fabert! I know him well; his name is Rantzau.' At the celebrated name of Fabert, the young officer burst forth, exclaiming, 'What have I done?—would to God that I were dead!' 'Make your escape, young fool,' cried Fabert, 'and try to conceal yourself from the disgraceful punishment which justice inflicts upon assassins.' The two officers, however, were afterwards taken and tried, though their lives were ultimately spared at the intercession of Fabert. Joined with this wild and sanguinary rashness, there often appeared, as a matter of course, many nobler and more generous traits of character. Courage and resolution, in all their forms, were to be found carried to the highest point; and no one displayed those qualities more strongly than Fabert himself, who joined to the sternest determination a degree of blunt simplicity which savoured of a former and more chivalrous age. Being severely wounded in Piedmont, the surgeons, after having examined his thigh, declared to the Cardinal de Lavalette that it would be necessary to amputate the limb; and that prelate undertook to communicate the tidings

to Fabert himself. The brave soldier, however, demanded to speak with the surgeons in the first instance; and, after having explained to him the nature of the wound, they informed him that they had come to the determination of amputating the leg. 'Gentlemen,' replied Fabert, 'you have not consulted the principal person interested, since it is my life that is at stake. No, no, I do not intend to die by pieces; death shall have the whole of me, or shall have none: who gets the *gigot*, gets the rest of my body. I will be my own surgeon.' And so good a surgeon did he prove, that, ere many weeks had elapsed, he and his valet had completely cured the wound which the others had pronounced incurable. A thousand instances of chivalrous generosity might be cited; and the noble and deep feelings in which they originated, offer a strange contrast, if we will bear them in mind, with the mercenary greediness, levity, and selfishness, which were already beginning, in some degree, to mingle with them, but which did not shine out in all their glaring nakedness till the troublous commencement of the succeeding reign. Chevreuse, the mortal enemy of Montmorency, rendered so by an unfeeling jest upon a personal defect, forgot his enmity the moment that his chivalrous adversary fell into misfortune, used his most strenuous efforts to save his life, and wept bitterly when his death was announced to him. In the attack upon Collioure, the *Maréchal de Meilleraie* raised all the wrath of Fabert by a sneer at the battalion of guards which he commanded, and which, for two years, had been on duty at the court. So high was the indignation of the latter, that he was quitting the head of his troops to take satisfaction on the spot, when he was stopped by Turenne, who in vain endeavoured to reconcile them. Shortly after, the Spanish army being before them, Meilleraie, as a noble kind of concession, sent for Fabert to give him his advice. The angry general, however, refused to quit the head of his troops, replying, that the battalion was ready to obey any orders, but its officers would not leave it. Thereupon Meilleraie rode up to Fabert, exclaiming, 'No rancour, Fabert, in the face of the enemy! Give me your advice:—what ought I to do?' 'Attack them!' was the laconic reply of Fabert. 'March!' replied Meilleraie; and the battalion of guards immediately charged up the hill, and, without the slightest disorder in their ranks, drove the Spaniards from position to position till they took refuge in the town itself. As he returned, Fabert was met by Meilleraie, who sprang from his horse to embrace him, and besought him to come with him immediately, to lay out the plans for attacking Collioure."

*Madame de Longueville.*—"In the very prime of her youth and beauty, brilliant, admired, and courted, the Duchess of Longueville, of course, excited no little jealousy in persons whose more mature charms were under the influence of life's autumn, and who saw the bright things of existence passing away into the hands of another generation. This feeling seems to have been the most poignant in the bosom of Madame de Montbazou; and, perhaps, D'Enguieu's affection for, and confidence in, his sister, irritated in some degree the elder lady to whom he had attached himself. The intimate friend of D'Enguieu, the Count de Coligni, was suspected of being attached still more strongly to the sister than to the brother; and one day after the Duchess de Longueville had quitted the school of scandal established by the Duchesses of Chevreuse and Montbazou, some letters were found, as if let

fall by her accidentally, which did not tend to put her fidelity to her husband in a very clear light. These letters were brought back to the circle, and read with many a jest and many a comment. The scandal spread all over Paris, and Madame de Montbazou lost no opportunity of promulgating that the letters which had been found had undoubtedly dropped from the person of Madame de Longueville, and were part of her correspondence with Coligni. The whole town was on fire with the tidings; it spread from house to house, and from lip to lip, till at length it reached the Princess de Condé, coupled with information of the part which Madame de Montbazou had played in the whole business. Indignant at the imputation cast upon her daughter, the princess immediately flew to the queen, demanding justice; but, before Anne of Austria could take counsel with her friends and advisers in regard to what she ought to do under such circumstances, the Duke D'Enguieu had at once chosen his part, broken off all communication with the enemies of his sister, and hurled a vehement defiance at the whole cabal, which was instantly taken up by the Duke of Beaufort. The quarrel spread through all their followers and attendants; the officers who had served under D'Enguieu flocked to offer him the support of their swords; the houses of Vendôme, Montbazou, Chevreuse, Guise, and Lorraine, ranged themselves on the other part; and, in a few hours, Paris would have been deluged with blood, if the queen had not exerted herself vigorously to put a stop to the quarrel and decide the dispute by her own authority: while the Prince de Condé, roused from his apathy by the danger of his son, used every energy to prevent the hero of Rocroi from shedding his blood in a pitiful quarrel commenced by a circle of bad women, and carried on by a faction of intriguing men. The queen announced to Madame de Montbazou that she must make reparation to the Princess de Condé, and the express terms were regulated by no less a person than Mazarin, who gained a great accession of influence by the support that he gave to the house of Condé, and by the abasement of one of the heroines of the opposite faction. An apology was drawn up, which Madame de Montbazou was compelled to read before a large assembly of the court at the house of the Princess de Condé; but, in so doing, she used a tone of insolent jest and raillery, which only aggravated her offence in the eyes of the Princess de Condé, and left them as bitter enemies as ever. The more serious disputes between the male parts of the two factions reduced themselves to a duel between the Duke of Guise and Coligni. It is more than probable that the letters were forged; but, whether the Duke of Guise had any share in their fabrication or not, he so warmly espoused the cause of her who had circulated the scandal, that the brunt of the affair naturally fell upon him. The matter needed not, however, to have proceeded to bloodshed, had the counsels of the wise and moderate friends of all parties been attended to; nor would it have done so, had not the mortified vanity of a woman taken part in the business. The Count d'Estrades, famous both as a soldier and a negotiator, was applied to by his relation, Coligni, to carry for him a message to the Duke of Guise, demanding his presence, with a single friend, in the Place Royale. D'Estrades replied that he would do so willingly, but that the duke had already publicly denied having any share in the scandal which had spread from the house of Madame de Montbazou; and that, if he repeated the

denial, he could not properly be called upon to give any further satisfaction. To this Coligni replied, 'That has nothing to do with the matter now. I have pledged myself to Madame de Longueville to fight him in the Place Royale, and I must not fail.' The Duke of Guise instantly accepted the challenge, and repaired early on the morning appointed to the Place Royale, which, though planted with trees, was at that time in the centre of the most fashionable part of Paris. Coligni met him with the Count d'Estrades, who, as was customary in those days, encountered hand to hand, Bridieu, the second of the Duke of Guise. Coligni was disarmed and wounded, and Bridieu was at the same time overcome by the Count d'Estrades, who instantly hurried up to his friend, whom he found severely hurt. Though wounded himself, he offered to Coligni to recommence the combat on his part with the Duke of Guise; but Coligni would not suffer him to do so, and was carried home, where, after lingering for some months, he died, greatly regretted by the whole house of Condé. There appears to have been very little doubt that the duel was entirely promoted by the beautiful Duchess de Longueville: but a still more sanguinary trait is generally added to the history, in which, perhaps, scandal may have had its share. The duchess, we are told, after having exacted from

her lover that he should fight the Duke of Guise, and having ascertained the time appointed, repaired to the house of the old Duchess de Rohan, and there, from behind a blind, became an unseen spectator of the combat which terminated so disastrously for her champion."

We look forward with much interest to the time when the young monarch takes the active power into his own hands.

*The Tour of Dr. Syntax in search of the Picturesque; illustrated with Original Designs by Alfred Crowquill. Pp. 361. London, 1837. Ackermann and Co.*

It is refreshing to have an old friend brought again to our recollection in a manner so pleasant as this. We remember Dr. Syntax, almost the Pickwick of his day; and the rich and exuberant Rowlandson expending the luxuriance of his genius in his company. If the Doctor was lean, the artist was fat; and between the two, the public regale was always gratifying. To follow such a man as Rowlandson, was no easy task; but the illustrations to this volume, though of an entirely different character, demonstrate how much one person of talent may vary from another, and yet how clever and appropriate may be his views of the

same subjects. As the text of old Syntax is too familiar to tempt us to extract, we shall, therefore, confine our criticism (shall we call it?) to an exhibition of the embellishments, which are, in our opinion, very humorously conceived and ably executed.

Kitty, the maid, substituting her own smart nightcap for the Doctor's wig, displays the hero at a favourable moment; and the beadle telling the tailor the news, is as fair a specimen of the artist's skill in identifying other parties. But what shall we say to his monstrous head of a critic? a portrait we never could pardon, but for the full-length publisher who *parallels* him: (there should have been an author to complete the trio). But, after all, this was the likeness of a critic:

"As wits and critics now \* were known,  
Who hash up nonsense for the town;  
And, in the daily columns, shew  
How small the sum of all they know."

The bookseller is a happy sketch of the

"Man whose ample paunch  
Was made of beef, and ham, and haunch;"

and Syntax's dream of the publication of a flight of volumes, is a whimsical piece, which well suits, with the two preceding wants of literature, to fill up a page of the *Literary Gazette*.

\* Then.—Ed. L. G.

*Treatise on the Microscope, forming the Article under that Head, in the Seventh Edition of the Encyclopædia Britannica.* By Sir David Brewster, K.G.H. &c. &c. 8vo. pp. 193, with Plates. Edinburgh, 1837. Black.

THERE can be no possible objection to the separate publication of any particular treatise which forms a part of a huge work like modern encyclopædias. In fact, we wish it were even more generally adopted, for the advantages which it possesses of placing each thing desirable at the command of individual taste or pursuit. The name of the author, and his intimate acquaintance with the microscope in all its forms, preclude the necessity of criticism; but the present volume has the great advantage of including the history of the later improvements in lenses, more especially of such as are made of precious stones—diamond, sapphire, garnet, and spinelle,—but we do not see any additional information concerning the lens for the fabrication of which the British Association have accorded a grant of money.

The discoveries by the microscope or engine, as Dr. Goring calls it, have, in modern times, been more fertile in interesting results than ever before. Among the latest novelties, are the detection of infusorial organic remains, consisting of the siliceous shells of animalcules, belonging to the division *Bacillaria*, and which form strata of Tripoli or poli-schiefer in Bohemia. It is impossible to anticipate the immense addition which might be made to our knowledge of extinct races of animalcules, and of organic origin of rock formations, by the extension of such researches. Mr. Ehrenberg has even found, in fusing, animals in the semi-opal of porphyretic rocks. The size of a single individual of these animals is about  $\frac{1}{350}$ th of a line, or  $\frac{1}{350}$ th of an inch. In the polishing slate from Bilin, in which there appear to be no vacuities, a cube line contains in round numbers 23 millions of these animals, and a cubic inch contains 41,000 millions of them!

Another curious and recent microscopic discovery, is the teeth of the fibres which compose the crystalline lenses of almost all animals. The crystalline lens is composed of innumerable fibres of nearly the same length, each of which tapers from its middle to its two extremities, where it comes to its sharpest point. The sides

of each of these fibres are furnished with teeth like those of a watch-wheel, and the teeth of the one lock into those of the adjacent ones. "The lens of a cod contains five millions of fibres, and sixty-two thousand five hundred millions of teeth," "and yet this little sphere of tender jelly is as transparent as a drop of the purest water, and allows a beam of light to pass across these almost innumerable joints without obstructing or reflecting a single ray!" These extracts will furnish some idea of the interest attached to microscopic investigation, and to the work before us.

*Excursions in the Abruzzi and Northern Provinces of Naples.* By the Hon. Keppel Craven, author of "A Tour through Southern Naples." 8vo. 2 vols. London, 1837. Bentley.

It may seem ungrateful to begin our review with complaints against a publication from which we have derived so much pleasure as we have from the present; but critics are said to be a grumbling race, and it is really owing to, and in proportion to, that pleasure, that we are so disposed to complain. The author, himself an elegant scholar, and familiar with the subjects touched upon in his Italian tours, has taken it too readily for granted that his readers would be prepared to follow him in even his slightest remarks. His fault has, consequently, been the fault not of commission, but of omission; not that he has told us too much or what was not interesting; but that he has told us too little, and avoided circumstances and details where he has created a longing for their minute illustration. When we have come to the mention of Roman and anti-Roman antiquities, of curious Latin inscriptions, of monuments belonging to the dark and middle ages—remains of the Volsci, Marai, Samnites, Sabines, Lydians?, and relics of the earliest saints and first popes of the Christian church—the increase of appetite has grown with what it fed on; and, like greedy and naughty children, we have cried for more long after our nurse supposed that we had had enough. Would that the microscopic spirit of a Muratori had been grafted on the antiquarian and topographical feelings of our countryman: in short, we wish he had printed four volumes instead of two!

But let us turn to what we have, and endeavour to communicate a taste of it to our readers; only further premising, that a slight outline of the routes would have been very acceptable, and that more particulars respecting artists of great merit, who, together with their works, are mentioned by the author, and who are hardly, if at all, known, even by name, beyond these their native regions, would be a welcome improvement in any future edition.

We will set out with a specimen of what we have alluded to as disappointments. At Antina (probably the Atinates of the Marai, spoken of by Pliny), it is stated,—

"It retains vestiges of its ancient origin in several portions of polygonal walls, some of which still preserve the form of an entrance or gateway, and serve as such to the modern village, under the appellation of Porta Campanile. The numerous Latin inscriptions which have been found on the spot, have been all collected by the successive members of Signor Ferrente's family and himself, and are to be seen, in excellent preservation, in the vestibules of his house, or the garden adjoining it. They are not without interest, proving that Antina was a place of some importance. This is exemplified by an inscription raised by the incorporated institutions of Centonari, Dendrofori, and Armamentari, who united in dedicating this record to Novius Felix, patron of the municipium of Antina. The traces of a no less curious monument are to be seen on a rock just outside the village, where the outline, but nothing more, of an inscription is visible: a copy of this, taken previously to its having become illegible, is to be found in the collection of the antiquities of Antina, published some years back, by a *canonico de sanctis*. It proves to be a sepulchral inscription, in Latin, to a female, named Varia Montana, by her surviving parents, the tenor of which is elegant and impressive."

Now, we would ask, is it not vexatious to hear nothing more of this inscription?—not to have a copy of it? We are so annoyed that we must leave antiquities, for the moment, and turn to modern matters at Antina.

"It would," says Mr. Craven, "be unfair to take leave of this spot without some reference to a distinction which I have heard conferred

upon it by the unanimous assent of all Neapolitans, including the authority of their late sovereign, King Ferdinand I.; and that is, the beauty of its women, which, nevertheless, I afterwards found to be overrated: it must, however, be admitted, that a very superior height of stature, straightness of limb, and regularity of feature, were frequently observable; to which was added a striking, though dark, brilliancy of complexion. But these advantages appeared to be possessed only by such of the softer sex as had already passed the age of thirty; and who, therefore, in these latitudes, had already outstepped the maturity of beauty; for, whatever might be the cause, which I had not leisure to investigate, no female of tenderer years was stamped with the same attractive character. It may, perhaps, be not uninteresting to the amateurs of horticulture to learn, that the only yellow double roses I ever saw blooming in the state of entire perfection were growing under a range of polygonal walls in a neglected vineyard at Atina.

Aquino furnishes another modern trait. "Its episcopal see, now united to that of Sorat, where the bishop resides, extends its jurisdiction over a considerable portion of the province. The town of Pontecorvo, divided in two portions by the Liris, and subject, with some intervals of exception, to the sway of the pope ever since the year 1463, stands about four miles from Aquino. Like Benevento, it is entirely surrounded by the Neapolitan territory; but at so short a distance from the Roman frontier, that it is a matter of surprise that no arrangement has ever been entered into by the parties concerned to place it in immediate contact with the state to which it belongs. Its counts were powerful vassals in the middle ages; and through one of those singular political vicissitudes which have marked the beginning of the present century, the last sovereign of Pontecorvo stepped from the possession of its insignificant principality, upon one of the thrones of Scandinavia."

From the throne of Sweden we shall descend to the description of a scene of a patriarchal character, which is certainly the most striking of its kind which Europe can present. Not far from Aquila, where saffron is largely cultivated on the Aterno and its many tributary streams, our author says:—

"One of the broad tratturos, or cattle-paths, runs in the same line with the high road to Aquila; and I was so fortunate as to see it occupied by a very extended line of flocks, which slowly passed by the carriage for the space of a mile or more. The word 'fortunate,' adapted to such a spectacle, may excite a smile in my readers; but I own that I never beheld one of these numerous animal congregations plodding across the flats of Capitanata, or the valleys of Abruzzo, as far as the eye can reach, without experiencing a sensation of a novel and exciting kind, nearly allied to that of enjoyment, but which I shall not attempt to account for. One shepherd heads each division of cattle, of which he has the peculiar care and direction: armed with his crook, he walks some paces in advance of his flock, followed by an old ram termed *il manso*; which word, meaning tame or instructed, has undoubtedly a more apposite signification than that of our bell-wether, though he is, as well as ours, furnished with a large deep-toned bell. The sheep march in files of about twelve in each; and every battalion, if I may so call it, is attended by six or eight dogs, according to its number: these accompany the herd, walking at the head, middle, and rear of each flank. The beauty and docility of these

animals, which are usually white, has often been described, and their demeanour is gentle as long as the objects of their solicitude are unmolested; but at night they are so savage, that it would be dangerous to approach the fold they guard. The goats, which bear a very small proportion to the sheep, and are in general black, wind up the array, and evince their superior intelligence by lying down whenever a temporary halt takes place. The cows and mares travel in separate bodies. A certain number of these flocks, commonly those belonging to the same proprietor, are under the immediate management and inspection of an agent, entitled *fattore*, who accompanies them on horseback, armed with a musket, and better clad than the shepherds, who, both in summer and winter, wear the large sheep-skin jacket, and are in other respects provided with substantial though homely attire, and good strong shoes. These *fattori* are all natives of Abruzzo, an Apulian never having been known to undertake the profession: the former, through particular habits and the repeated experience of years, are looked upon as so peculiarly fitted for the care required by cattle, and indeed animals of all kinds, that all the helpers in the stables of the capital are natives of these provinces, or of the adjoining county of Molise. In addition to these qualifications, they are esteemed an abstemious and honest race. When following the calling of shepherds, and occupied, as I saw them, in the duties of their charge in travelling, their countenances are almost invariably marked by the same expression, which combines mildness and sagacity with immovable gravity, and, it is painful to add, a look of deep-seated sadness; the whole caravan, animal as well as human, exhibiting, at least while engaged in one of those tedious peregrinations, a general appearance of suffering and depression, distinguishable in every individual that composes it. The shepherd that opens the march, the independent *manso*, jingling his brazen bell, the flocks that follow, the dogs that watch over their security, and even the *fattore* who directs the procession, all appear to be plodding through a wearisome existence of monotony and toil. The extreme slowness of their progress, the downcast expression of every head and eye, and, above all, the indications of exhaustion and fatigue which are but too perceptible after a journey of more than a month's duration, may well account for this impression. The animals suffer greatly from heat until they reach their summer dwelling, and fall as much from lameness, which, when it has reached a certain pitch, becomes the signal for destruction. I saw a mule bearing no other load than the skins of those that had perished in this manner. Several other beasts of burden follow the rear of the herds, laden with the various articles necessary for them and their guardians during their protracted march: these consist in the nets and poles requisite to pen the folds at night, the coarse cloth tents for the use of the shepherds, and a limited stock of utensils for milking, and boiling the produce of the flock. Among these are to be noticed some portable jointed seats of very ingenious though simple construction, composed of the stems of the giant fennel, a substance remarkable for its light and compact texture. The cattle which I thus met near Aquila were within two days' journey of their resting-place, which is generally in some of the valleys placed on the lower flanks of the mountain ridges, but sufficiently elevated above the larger plains to afford fresh and abundant herbage and a cooler temperature. The duration of their abode in these regions is regulated by the rapid or slow progression of the summer season; in

the course of which they shift their quarters, as the heat increases, till they reach the highest spots, which are the last divested of the deep snows in which they have been buried during three-quarters of the year. Here large tracts of the finest pasture, hills of the coldest and purest water, and shady woods of considerable extension, are occupied by them during the remainder of the fine weather, and afford the *plus ultra* of enjoyment allotted to an existence of such restricted variety.

"The upper regions, and most inaccessible recesses of the mountains which cover almost the whole surface of the second Abruzzo Ultra, are the scenes which nature appears to have purposely formed for, and appropriated to, the summer abode of these stupendous flocks. In Abruzzo Citra, or the province of Chieti, as it is likewise termed, no similar pastures exist, though it is not deficient in hilly tracts; and few are to be found in the division of Abruzzo Ultra prima, though the eastern flank and extended ramifications of the king of mountains, the Gran Sasso, are included within its precincts. The paths which the herds follow in their annual migrations to and from Abruzzo are wide tracks marked out on the turf, the integrity of which is attended to with great assiduity. Under the generic name of *Tratturo delle pecore*, they all commence in the province of Capitanata or Puglia piana, and for some time run parallel with each other till they reach the adjoining province of Molise, when some branch off to the higher districts of this region, which, in some of its mountains, especially the Matese, affords a limited portion of summer pasture. Continuing in a line with the shore of the Adriatic, the other cattle-paths occasionally intersect one another, and finally extend their various veins into Abruzzo Ultra, as above described. This custom is involved in questions of such vital importance to the proprietors and inhabitants of these provinces, that one can scarcely wonder that it has existed, with very slight changes or modifications, ever since the Roman era, and has, at different periods, called forth the attention of the most enlightened sovereigns and statesmen. Alphonso of Aragon was, however, the first who, by establishing irrevocable laws and regulations as to the mode in which it was to be prosecuted, ensured a considerable revenue to the crown, and at the same time maintained the rights and advantages of the flock-holders. From that epoch, all the lands granted to Apulians, under Cenosis, or Emphyteusis, to the sovereign, were charged with the express condition of being let out, during the winter season, for the use of the Abruzzese possessors of cattle. This being enforced as a law, the former found it a matter of consequence, if not of necessity, to their interests, to become likewise proprietors of flocks, in order that, by a system of reciprocity, their herds might join those of Abruzzo in their summer migration, and participate in the benefits which the peculiar topography of that province only could afford to them. It certainly is a circumstance worthy of notice, that the climate and geological formation of two districts so nearly contiguous, and situated on the same line of coast, should differ so essentially as to render one totally unfit to support large flocks of cattle during the summer, while the other is disqualified for maintaining them during the opposite season. It should be noticed, that the measures established by Alphonso of Aragon were entirely favourable to the Abruzzese proprietor, who, though he be the unconstrained and direct owner of his

land, and not a lessee of the crown, can turn it to no other advantage than the pasturage obtained in the summer months; while the Apulian plains are fertile enough, and sufficiently favoured by climate, to repay the slight labour of various modes of cultivation. During the French occupation of the kingdom, a more enlarged and less partial system of policy having prevailed, the restrictions were removed from the Apulians, and being thereby empowered to submit the culture of their land to what species of produce they preferred, much of it was ploughed and adapted to raising corn and cotton—commodities which, for a time, proved a source of considerable gain, but only as long as the freshness of fertility inherent in an untilled soil, and the facility of disposing of the produce without competition, continued to exist. Time, and the close of the continental war, brought both these to a termination; and it was then discovered that, while the Abruzzese landholder, who had no resource but his flocks, was ruined by the abrogation of the old system, the Apulian proprietor had only gained a temporary advantage over his neighbour; and that a renewal of the anomalous and antiquated laws might, after all, restore a fairer balance between them. Shortly after his return from Sicily, King Ferdinand I. instituted a committee, who, after taking the complaints of the Abruzzese into consideration, and maturely weighing them against the unlimited prerogatives granted to the Apulians, might frame some regulations which might equitably secure the welfare of both. It is difficult to decide whether this result has been obtained by the promulgation of a royal decree, which restored the ancient law to very nearly its original form, granting to the Apulians the right of cultivating one-third of their crown leases in any manner they think fit, but enforcing the obligation of allotting the remainder to the winter occupation of the cattle. This has opened to the Abruzzese the stream of their former prosperity; but the flocks, which had suffered considerable diminution from the causes above specified, have never been, and probably never will be, restored to their original numbers. The Apulians have entirely ceased to have any share in the possession of cattle; and, although they have the power of cultivating, at their own option, one-third of their property, and are certain of letting the remainder during the winter, the rents are so fallen, from the reduction of the flocks, that they find themselves, upon the whole, the only sufferers. Before the year 1800, the amount of sheep alone, that travelled from Apulia to Abruzzo and back again, was estimated at more than a million; but is now reckoned little more than half, of which about sixty thousand resort to the Roman coast for winter dwelling; a small quantity likewise remain in the sheltered parts of Abruzzo; these are called *pagliarde*, and are killed for butcher's meat, or their produce used for the purposes of rural economy. It is calculated that about five thousand individuals obtain a subsistence by attending the cattle."

Reverting to the Marsi, we are told:—

"The tract of country which they inhabited, and which bore their name, offers the only example of the ancient denomination being retained in common use to this very day; while the same limits, which bound the district they possessed in the early era of the Roman commonwealth, are observed as those of the Marsian territory in the nineteenth century. While the feudal lords of the middle ages assumed the title of some individual town, castle, or territory, the possessors of this portion of

the kingdom styled themselves, first Castaldi, and afterwards Counts of the Marsi, a rank still enjoyed by the Colonna family. It would appear affected in any one to talk of going into Samnium or Lucania; but an excursion *ne i Marsi*, is a proper, and even commonplace, mode of expression. Their towns are distinguished by the same adjunct; and the bishop, who resides at Pescara, instead of deriving the name of his diocese from this town, signs himself *Vescovo de Marsi*.\* I hope it will not be deemed a frivolous stretch in favour of identity, to observe, that the present inhabitants of these regions pretend to possess the same occult powers which distinguished their forefathers, in charming venomous reptiles, and rendering them innoxious. In most parts of the Neapolitan dominions they are occasionally to be met with, carrying boxes full of serpents, of all sizes and colours, which they display to the gazing multitude; offering, at the same time, for a very trifling remuneration, to render the spectators invulnerable as themselves. I have frequently seen these individuals, in the early days of spring, sitting at Naples on a sunny parapet, near the sea, exhibiting their collection of reptiles, and collecting, apparently, no inconsiderable contribution from the curiosity or credulity of the bystanders. The operation requisite to secure them against the poison of the snake in future, is performed by slightly scratching the hand or arm with a viper's tooth divested of its venom; then applying a mysterious stone to the puncture; and finally furnishing the patient with an image of, and a prayer to, San Domenico di Cocullo, a village among the Marsian hills, where a celebrated sanctuary is every year thronged by pilgrims from all parts of the province; modern devotion having transferred to a sanctified being the attributes which ancient superstition ascribed to dealers in necromancy and divination. This ceremony is called *ingermare*, a word from which it would be absurd, as some have sought, to derive our expression, 'to charm,' which, undoubtedly, springs from *car-men*, a verse or song; but which may more properly be rendered by inoculate, insert, or engraft."

Again, near Luco, a natural emissary of water is mentioned, and Mr. Craven says,—

"When I visited it, the spot was rendered more remarkable by innumerable swarms of snakes that lay basking in the sun on the stones, and sprang into the water on our nearer approach: they could be seen swimming under the surface round our boat, and darting their tongues against it with all the appearance of wrath and violence. It was impossible not to be reminded of the traditions relative to the charming powers of the ancient

\* Another curious notice of regard for names is recorded in the following:—

"Popoli contains about four thousand inhabitants, and presents that aspect of industry and activity which gains upon the partiality of a traveller at first sight. This is probably owing to its position as a thoroughfare, not only between Solmona and Aquila, but likewise between those two cities and Chieti, the capital of the adjoining province, and the shores and ports of the Adriatic sea. It has a good square, and some large houses, among which must be noticed a large and now dilapidated mansion, of handsome architecture, once the residence of the family of Cantelmo, dukes of Popoli, and the most opulent and influential in the province. It is now extinct, having merged into that of Tocco, princes of Montemiletto, through the female line. But this last, as well as all the descendants of the heiress in whom it terminated, have considered it a distinction to take the name of Cantelmo to their own, with the adjet Stuart, the authority for doing which I was at some pains to discover. It appears that the original stock of Cantelmo, who came from Provence with Charles of Anjou, claimed consanguinity with the kings of Scotland; and succeeded, under our Charles II., in obtaining from that monarch a recognition of the connexion, and his full sanction to bear the name."

Marsi, and the numerous reptiles said to inhabit their country. The locality also assisted this impression, as the name of Luco is supposed to be derived from the Lucus Angitia, the mystic grove in which the inhabitants performed sacrifices in honour of Angitia, the sister of Circe, whom they looked upon as having first taught them the virtues of herbs and simples in healing the bites of serpents, and the power of charming them."

[To be continued.]

#### MISCELLANEOUS.

*The Domestic Medical Pocket Book, or Family Vade Mecum, &c. &c.* By W. H. Kittoe, Surgeon. 8vo. Pp. 278. Southampton, 1837: Fletcher and Son; London, Longman and Co.

"LITTLE knowledge and much danger," is as proverbial as domestic medicine is disliked by the profession. We have, this week, for example, had to trudge from the high contemplation of the effects of civilisation upon the nervous system, and of these, again, upon the treatment of diseases, to the matter of fact work of how much calomel is a dose, and at what period of measles bleeding is advisable. So there will be always two extremes in all things; and his the best course who steers between the two. There are, however,—to be serious—advantages in domestic medical works, as they teach how something may be done till medical aid can be obtained; slight grievances may be cured, and more serious ones alleviated; and they are particularly called for on shipboard, where there is no medical man. If, then, they are useful under some circumstances, their chief recommendation should be, simplicity, distinctness, and brevity. We have much pleasure in saying that Mr. Kittoe's book possesses these advantages in an eminent degree, and is highly worthy of patronage where it may be useful.

*Dr. Lardner's Cabinet Cyclopædia, No. XCVII. Geology.* By E. I. Phillips. Vol. 1. London, 1837. Longman and Co.

WHATEVER may be the difference of character in the volumes of this series, reaching now to nearly a hundred publications, and there has been much, we can have no hesitation in placing the present continuation among the select few to which the greatest value is to be attached. Mr. Phillips is one of our ablest, most practical, and least theoretical geologists. His views are always expressed with singular plainness and clearness. He knows as much of the science as any body; and he possesses the art of communicating his knowledge to others in the best possible manner. Of this the volume before us is a strong example; and we feel assured that, when the sequel is added, we shall have as complete and popular a guide to the facts and inferences of this interesting and important pursuit as its state and condition admit. As far as he has gone, the author has given us a most admirable *résumé*, and combined with it much original matter and reasoning, for which we are indebted to his own intelligent mind.

*The Church of England Preacher, Vol. I.* Pp. 377. (London, Harding).—A selection of sermons from eminent divines preached during the year, and in a neat and cheap form. The names of Noel, Mortimer, Chalmers, Dale (Frost and Snow, by the by), Melvill, and others, give assurance of its worth.

*The Heart's Ease.* Pp. 282. (Cambridge, Stevenson; London, Simpkin and Marshall).—A reprint of Bishop Patrick's valuable treatise, which we are glad to see again in a popular shape. The afflicted may find much solace in its pages.

*Conversations on Chronology.* Pp. circ. 100. (London, Pickering).—An admirable little book "for children," as the title-page has it; but by no means unfit for persons of all ages.

*Logarithmic and Trigonometric Tables to Seven Places of Decimals.* Pp. 300. (London, Simpkin and Marshall.)—A capital set of Tables, and to a very considerable extent.

*Letters from an absent Godfather,* &c. by the Rev. J. E. Ridele, M.A. Pp. 208. (London, Longman and Co.)—The curate of Harrow, and author of "First Sundays at Church," &c. has here given us a very pleasing manual of religious instruction for the young, in which their duties are feelingly enforced.

*A Manual of Conduct; or, Christian Principle Exemplified in Daily Practice,* by the Author of the "Morning and Evening Sacrifice, &c." Pp. 461. (Edinburgh, Blacks: London, Longman and Co.)—Full of good moral inculcations: an excellent Sunday family book.

*Biblical Cabinet,* No. XXI. (Edinburgh, J. Clarke.)—This volume has an interesting commentary on the Epistles of Paul, translated by the Rev. W. L. Alexander, from the German of Dr. Belroth—a very able essay towards elucidating the true meaning of the great Apostle's language.

*Selection of Joseph Cottle's Poems.* (London, Hamilton, Adams, and Co.)—A fourth edition, which shows the estimation in which the work is held for the use of young persons in religious schools and at home.

*Sketches of London,* No. 111. (London, Orr and Co.)—With two comic etchings this No. contains an account of the famous Lumber Troop, which will, we dare say, be as new to a million of the population of London as to us. These pot-valiant heroes, it seems, have considerable influence on the city of London elections, and municipal affairs. In other respects, they meet at a tavern in Bolt Court, and, with brandy, gin, and beer, pass their nights in convivial style, accompanied by ludicrous ceremonies and debates.

*Memoirs of a Smuggler.* (Sldmouth, Harvey: London, Longman and Co.; Whitaker and Co.)—A small volume giving, apparently, a genuine account, with a genuine local map, of the adventures of one John Rattenbury, dignified by the title of the Rob Roy of the South, and who passed his life between piloting, smuggling, and gaol. There is rather an attempt at fine writing in it; and yet the particulars are not sufficiently described to afford much interest, though some of the escapes are so extraordinary as to be quite romantic. Rattenbury seems to have been a bold and daring fellow—an honour to Boer and Brixham in the smuggling line; and it is to be hoped that his old age will not be left destitute; especially as, on several occasions, he bravely encountered dangers to save life and property on the sea. This book is published for his benefit.

*The Cycnours; being Select Passages from the most Distinguished Writers.* Pp. 255. (London, Pickering.)—A pretty little volume, with a multitude of tasteful selections from some 900 authors, and a fit companion for the popular "Carcenet," by the same editor.

## ARTS AND SCIENCES.

### SOCIETY OF ARTS.

MR. AIKIN 'On Calico Printing.' No. 2.—After recapitulating the heads of the first lecture on the same subject, which was reported in the *Literary Gazette* a month ago, the secretary, in the present address, proceeds to observe, that the chintz and palampore of India long continued to be the prototypes of European printed calicoes, in which the colours are distributed more or less in masses representing flowers and other natural objects. For these nothing but wooden blocks can be employed; as wood is the only material which with any convenience will allow of the insertion of pieces of felt necessary in those parts of the pattern where a considerable quantity of mordant is required; and, therefore, even at the present day, for such kinds of patterns, block printing is universally practised. At length, in the change of fashion, stripes, sprigs, running foliage, and other simple and neat, but rather unmeaning patterns, raised in one colour, were introduced. It was soon found that such patterns could be represented with more delicacy and precision by copper-plate engraving than on wood. The plate and rolling-press were, therefore, introduced into the calico-printer's workshop, instead of the block and mallet. The spirit of competition, a rapidly extending market, and the ambition of "riding" much work with a comparatively small profit, soon occasioned the substitution of the copper cylinder instead of the plate. The mordants, mixed with gum to the consistence of printer's ink, were distributed on the plate, first by hand and then by machinery; which last, with the necessary modifications, was adapted to the cy-

linder. The time thus saved encouraged the calico-printers to give more precision to their machinery, by means of which, at the present day, they are capable of working two, and even three, cylinders, each distributing a separate mordant at the same time to the same piece of cloth, and at a rate which enables them to finish a piece in three minutes, and with a degree of precision, all things considered, truly surprising. Mr. Aikin then, in a clear and simple manner, explained the chemical part of the process, by means of which such an almost infinite variety of tints and colours are produced; but, as it would be impossible, in the space allotted to this report, to follow the notes of the lecture through the whole of these details—interesting as they are—and, as it would be equally impracticable to give a satisfactory analysis of them, we pass them over, and conclude by noticing the facility with which many compound or simple dyes on calico may be resolved or analysed by the use principally of three re-agents, viz. bleaching liquor, solution of carbonate of potash, and of oxalic or tartaric acid. Indigo blue may be distinguished from Prussian blue by the action of bleaching liquor, which will destroy the indigo, but has no effect on Prussian blue; or by the use of carbonated alkali, which does not touch indigo, while it turns Prussian blue to an iron brown. All vegetable and animal colours yield to bleaching liquor; those that do not are mineral or chemical colours: a colour, therefore, that is compounded of both kinds, may be resolved by the action of this substance. Chrome yellows are shewn by their habitudes with carbonated fixed alkali, and by their becoming dark brown after the action of alkali, when touched with solution of an alkaline sulphuret. Iron yellows are soluble in tartaric acid, which chrome yellow is not. Greens, composed of yellow and blue, if both ingredients are vegetable, are discharged by bleaching liquor; if the yellow is chrome, and the blue is indigo, the action of carbonated alkali will discharge the yellow, leaving the blue; while that of bleaching liquor will discharge the blue, leaving the yellow. Brown, composed of oxide of manganese and madder, is resolved by bleaching liquor, which leaves the manganese, or by proto-muriate of tin, which dissolves the manganese.—In the museum were exhibited specimens of wheat, raised by cot-tagers, by means of dibbling, six inches apart. A memorandum, accompanying the specimens, set forth, that one individual began dibbling one grain of wheat to the square foot, which sprang up regularly, and yielded him forty-two bushels to the statute acre; a large return for 4lbs. 10oz. of seed. The specimens exhibited were prize specimens of the Battel and Hastings Horticultural Society, and measured five feet and a half in height, with ears proportionally large and full.

### LINNÆAN SOCIETY.

MR. FORSTER in the chair.—The secretary read a letter from the president, in which he nominated Mr. Brown, Mr. Forster, Dr. Harfield, and Mr. Lambert, vice-presidents for the present year.—The chairman read a letter from Lord John Russell, in answer to the address to her majesty, voted at the preceding ordinary meeting, and announcing that her majesty had been graciously pleased to become the patroness of the Society.—A number of casts and impressions of recent ferns and other plants were placed on the table for exhibition by Mr. Morris, of Kensington. In a note which accompanied the specimens, that gentleman stated,

that he found it impossible, in many cases, to determine from the casts whether the divisions of the frond were continuous with the midrib, or elevated on a partial stalk, as in *Pteris falcata*, *Lindsaea trapeziformis*, and others, and that this character, which is also dependent, in some instances, upon whether the cast is taken from the upper or under surface of the frond, has been a source of error in the distribution of fossil species: the circumstance of the divisions of the frond, continuous or not, having been regarded as a character of primary importance by the fossil pterologist. The writer repeated some of Professor Göppert's experiments, by subjecting the specimens to slight pressure between layers of clay, which were slowly dried, and afterwards placed in a furnace; but, from the heat being too great, the whole of the carbonaceous matter was destroyed, nothing being left but a portion of white ashes, which, however, in the cases of *Equisetum* and some *Conifera*, still retained traces of the original structure: others, in which the carbonaceous matter had been preserved, it had coloured the clay to some distance around the specimen. From specimens recently soaked in metallic solutions, such as sulphate of iron, &c. and afterwards placed between layers of clay, as in the former experiments, and subjected to the heat of a furnace, complete casts were obtained, presenting all the appearance of the original plants. Some of these, examples, Mr. Morris conceives, explain the condition in which some fossil ferns are found in the sandstones and shales, associated with the carboniferous and oolitic series, that is, partly bituminised and partly mineralised.—Read, a notice of certain Australian quadrupeds, belonging to the order *Rodentia*, by Mr. Ogilby. It is well known that a large proportion of the terrestrial quadrupeds of Australia are marsupial, and that, with the exception of the bats, a very small number indeed of the indigenous terrestrial quadrupeds are non-marsupial; the six or seven species already known belonging exclusively to the order *Rodentia*: the remaining orders, *Quadrumania*, *Carnivora*, *Edentata*, *Pachydermata*, and *Ruminantia*, being without a single known representative in that vast region. The dingo, or native dog, can hardly be classed among the indigenous quadrupeds, as it is always found associated with the natives, and is probably contemporary with their primitive settlement in that quarter of the globe. One of the animals described in the paper is the "native rabbit;" under which name specimens, brought home by the late Mr. George Caley, are in the rich Australian collection of the Linnæan society. It forms a new genus, which Mr. Ogilby has named *Coniurus*, with the specific appellation of *Constructor*, from the ingenuity displayed in the construction of its habitation, which is formed of dry sticks and brushwood, and which is so strong and massive, as to completely protect the little animal from the attacks of the native dog. Another animal described in this paper, is a new species of Jerboa discovered by Major Mitchell, surveyor-general of the colony of New South Wales, at Reedy Plains, near the junction of the Murray and Murrumbidgee, on the northern boundaries of Australia Felix. The species has been named by Mr. Ogilby, *Dipus Mitchellii*, in honour of the meritorious officer who discovered it. Charles Lucien Bonaparte and Major Mitchell were present at the meeting. At a general meeting, the Bishop of Norwich was elected president of the Society, in the room of the Duke of Somerset, who has resigned.

## ZOOLOGICAL SOCIETY.

THE Rev. Mr. Barlow in the chair. — At the usual monthly meeting, fourteen new fellows were elected, and accounts were rendered. Upwards of 4000 persons visited the gardens and museum last month. Stock at the gardens on the 30th November, 276 quadrupeds, 803 birds, 19 reptiles; total, 1098. — In the course of the past month an addition has been made to the living collection, which, from its value and interest, the council specially reported to the meeting. The animal referred to is the Orang-Utan (*Pithecius satyrus*) of St. Hilaire, which was obtained by purchase at the cost of one hundred guineas. It is a young female, and appears at present to be in a satisfactory state of health. It was brought to this country by a person engaged in commercial pursuits, who purchased it at Singapore, to which place it had been forwarded from Borneo. The apparently good health of the animal, the equal temperature of her abode—a portion of the giraffe-house—and the readiness with which she has become attached to her keeper, justify the hope of her being for a long period a source of interest and of attraction at the gardens. — Mr. Yarrell gave in his resignation as secretary, which was received with much regret. — A vote of thanks was unanimously given to him for his zeal and ability in promoting the interests of the Society, and of zoology in general.

## METEOROLOGICAL SOCIETY.

Nov. 21. Dr. Birkbeck, president, in the chair. — This was the first meeting of the session 1837-8. After the formulæ of the Society were disposed of, six practical meteorologists were admitted members. The papers were numerous and valuable. The first paper read was 'On the Natural History and probable Causes of the Vernal Winds of the North of England, as they prevail in Westmoreland.' The author of this excellent paper, the late Mr. John Gough, was deprived, at a very early period of his life, of one of the most valuable of his senses—sight; yet, his love for scientific studies was so great, that he eventually became an eminent mathematician, philosopher, botanist, &c. He devoted much time to meteorology, and observes, with regard to the causes of the vernal winds of Westmoreland, that "every phenomenon which is periodical, like the easterly winds of spring, must be ascribed to a cause equally periodical." Mr. Gough ascribes the cause of these winds to the progressive advances of the spring from the south to the north, which commences, in Italy, about the 20th of February, and is equally advanced in England about the middle of April, at which time the countries on the confines of the arctic circle remain buried in snow. This difference in the temperature of the atmosphere of Britain, and the more northern regions, gives a greater specific gravity to the air of Sweden and Norway than to that of England, and all the intervening countries which are free from snow; and this access of density Mr. Gough assigns as the cause of the vernal winds. This conjecture is founded on that law of hydrostatics which proves, that when two columns of air, of different specific gravities, rest upon contiguous bases, the heavier will remove the lighter, and flow into its place. The drought which generally prevails in April, Mr. Gough ascribes to these vernal winds; because, he writes, "As the cold current begins to blow over the warmer lands, it begins to acquire heat, and with it, the power of dissolving more water—hence the drought." The next paper read was from

Lieut. Morrison, R.N., of Cheltenham, inventor of the portable magnet electrometer, 'On the Principles, General Bearings, and Utility, of Meteorology, with some Account of Atmospheric Electricity.' On the first part of this paper, Lieut. Morrison observes, "Hitherto, there has been less of practical usefulness in meteorology than in other sciences, for the reason, that it has required a very long series of observations to arrive at any certain and determined data whereon to establish its principles." The great developments of chemical science, the rapid progress made in the science of electricity, and the active exertions now making by the members of the Meteorological Society, have opened the door to the science of meteorology, towards a more rapid march henceforward. Another valuable portion of this paper contains some interesting remarks on the currents of electricity. The following results, extracted from a meteorological diary kept near Liverpool, shew the effect of the electrical currents on Lieut. Morrison's electrometer. 1st. When the air is plus, the north pole of the magnet deflects to the east. This is the case almost always in clear weather in the day time, except when rain or mist is about to ensue in the course of a few hours, when the barometer falls. 2d. When the air is minus, the north pole of the magnet deflects to the west. This is the case almost invariably in thick, misty, or rainy weather, except when fair weather is about to ensue, both by day and night, when the barometer rises. 3d. At the approach of storms, the currents of electricity are greatly disturbed, and the magnet is much agitated, and will remain in a tremulous state, and vary, or oscillate, several degrees in a few minutes: the barometer then falls extensively. Similar results have been observed with this beautiful and delicate instrument at Bahia, and other places in the tropical regions, and also at sea. We could wish this instrument were in more general use, because the results would greatly assist in the development of many meteorological phenomena which have hitherto baffled the efforts of the most active meteorologists. There were several other papers on meteorology, the reading of which was deferred to the adjourned meeting. The plan of a self-registering barometer, by Mr. R. C. Woods, meteorological instrument maker, Hatton Garden, attracted great attention; not from the elegance of the instrument, but its usefulness. The self-registering barometer has been a desideratum among meteorologists for many years. Mr. Woods seems to have overcome this difficulty; and, indeed, if we may be allowed to form our judgment upon his great improvements in the mountain and marine barometers, we should at once say he is capable of overcoming every obstacle that at present impedes the progress of meteorological science. A full description of the instrument, with an engraving, will appear in the Society's Transactions, which will be published during the present session. In the mean time, a slight description of the instrument must be interesting to scientific readers, which cannot be better given than in the inventor's own words. After speaking of the vast number of observations necessary to be made, day and night, in order to find both the maximum and minimum height of the barometer in twenty-four hours, Mr. Woods says: "To supply this deficiency in an instrument so important in the science of meteorology, I have submitted to the Meteorological Society an instrument which will, in the absence of the observer, register the minimum and maximum height of the mercurial column; and which,

from the peculiarity of its construction, is equal, inversely, to obtain the mean height, as by three ordinary barometers: and, in order to render the instrument as complete as possible in the hands of the meteorologist, on the same frame is introduced a mercurial thermometer, Six's registering thermometer, and De Luc's, or Saussure's, hygrometer." Mr. Woods also introduced his double registering thermometer—an instrument which shews how to account for the difference of temperature in two thermometers in the same locality; for even this instrument will give a difference of one degree, where the maximum and minimum are registered twice in the same scale.

## LITERARY AND LEARNED.

## UNIVERSITY INTELLIGENCE.

OXFORD, Dec. 6. — The following degrees were conferred:—

*Bachelors of Arts*.—The Right Hon. Lord Stairville, Christ Church; J. S. Hodson, Postmaster of Merton College; T. B. Wright; J. B. Riddle, Wadham College.

## ROYAL ASIATIC SOCIETY.

DECEMBER 2. The first general meeting of this Society, for the session, was held this day, the right hon. the President in the chair.—Numerous donations to the library and museum of the Society were laid before the members. Among the first was a copy of Professor Gesenius's great work on Phœnician inscriptions which the professor had dedicated to the Society as a mark of his estimation of the utility of the Society in advancing a knowledge of Eastern literature, and as a testimony of his gratitude for the assistance it had afforded him in collecting materials for his work. A paper was read by H. Wilkinson, Esq. 'On the Invention of Gunpowder,' which appears to have had its origin in the East, although the time and place of its discovery are involved in obscurity. The opinion of its oriental origin is rather supported by a number of concurrent probabilities, and by allusions in ancient authors, than by any direct testimony. Upon this subject the writer proposed an ingenious hypothesis, which has much probability. He observed that gunpowder was greatly improved by an admixture with sulphur: it did not necessarily require that ingredient, but that it might be made by charcoal and nitre only. The soil, in many parts both of India and China, is much impregnated with nitre, and it was, no doubt, anciently the custom in those countries, to dress food by wood-fires kindled on the ground; this custom is, indeed, still followed by certain classes in India. In most cases when the fires have been extinguished, a portion of the wood would become charcoal; this mixing with the nitrous soil might be converted into a deflagrating mixture, which would probably, in some of the many instances which took place, be observed by some one of sufficient anxiety to examine into the causes of the extraordinary appearance. Thus would gunpowder be found out, at first, probably, as an amusing plaything, which was destined to grow up to the giant force which, in modern times, had changed the face of the world. Mr. W. then adverted to the Greek fire which was in use as a weapon of war before the application of gunpowder to military purposes, and the accounts of which have been sometimes mistaken for those of gunpowder, so as to give rise to an opinion of the more early introduction of gunpowder than was really the case. The invention has been attributed, by different writers, to our countryman, Roger Bacon, who lived in the 13th century, to the German chemist Schwartz, and to Marino Græcus, who

is supposed to have lived about the 8th and 9th century, and who is quoted by Dr. Jebb in his Preface to Bacon's "Opus Majus;" but it was remarked, that there might have been rediscovers, or that they might have been new applications of what was already known. The paper concluded with details of the proportions of sulphur, nitre, and charcoal, used in making gunpowder at different epochs, and with the observation, as illustration, of the importance of the manufacture to this country, that some of our private manufacturers prepare from 8000 to 10,000 barrels per annum during peace, and from 10,000 to 14,000 during war. When the reading of this paper was concluded, Professor Wilson remarked, that there was no apparent reason to doubt that the Hindus might have been acquainted with gunpowder, but that they most probably used it manufactured only into rockets. Ctesias had alluded to a knowledge possessed by them of something which seemed to be of the nature of the Greek fire. The historical and mythological poetry of the Hindus occasionally introduced a mention of weapons of fire, and this, though generally understood in a mystical sense, might have had its foundation in some real fire arm. Colonel Briggs observed, that in Dow's translation of "Ferišta," guns were spoken of, but that in his opinion the proper term was naphtha. That no guns were used in India before the invasion of Babu in 1537, though mention was made of arrows tipped with naphtha and shot against opposing troops as early as the 9th century. W. Newnham, Esq. read an extract of a letter from a naval officer, who sailed on board the sloop China, from Bombay to the Persian Gulf, in the year 1832, detailing a most remarkable phenomenon, which was seen by all on board, with astonishment and some degree of fear. In the month of August, about eight o'clock at night, while the ship was rapidly advancing with strong wind and high sea, they were, without any interval, instantly surrounded by water as white as milk. The colour near the ship was of a dead white; this brightened as it receded from the ship, until, towards the horizon, it became of a silvery hue. No horizon was, however, visible, but the white colour seemed to ascend towards the zenith, becoming constantly more brilliant and dazzling, so as to obscure the stars, which had been before fully visible. The sea became quite smooth, and the ship perfectly steady, as though in a calm, nor could any appearance indicating her cutting through the water be discerned: notwithstanding which, the wind still continued to blow, and the ship to advance as rapidly as before. The water, when taken up in a bucket, did not differ from ordinary sea-water; it became phosphorescent on being agitated, but not more so than usual; no phosphorescence was visible in the sea itself, being, most probably, overcome by the colour of the water. The vessel sailed about fifteen miles through this white sea, and then left it as suddenly as it reached it, meeting in an instant the tumultuous sea it had been sailing in before. The change in both cases was as rapid as a flash of lightning. The same phenomenon was again observed, two several times, for periods of about twenty minutes' duration; and the appearance was, in both instances, as before described. Colonel Briggs remarked, upon this letter, that he had himself witnessed a similar phenomenon on board the Benares, in the year 1810: that some alarm was, at first, caused by it, but that the captain had witnessed this remarkable appearance before. In fact, he understood that, it was by no means rare, but had been noticed

by most vessels sailing in those latitudes. Adjourned.

## SOCIETY OF ANTIQUARIES.

MR. AMYOTT in the chair.—Mr. Cole exhibited an original letter of privy seal of James I., for borrowing 20*l.* of Matthew Cracherode, Esq., dated 30th October, 1604. Mr. J. G. Nichols communicated a description of the enamelled copper-dish exhibited by the Rev. H. Crow, on the 18th of November, and explained the lines on the edges of the two semicircular pieces of which the dish was composed. Mr. Nichols considered that these pieces, now riveted together very clumsily, were never parts of the same, or indeed any dish, but part of the rich ornaments on the binding of a Bible presented to the monastery by Henry de Blois, Bishop of Winchester, and brother of King Stephen. Mr. Gage communicated a description, with a drawing, of a small ancient British buckler, formed in metal, and about fourteen inches across, found in the bed of the Isis, between Wittenham and Dorchester.

## LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

*Monday*.—Statistical, 8 P.M.; Phrenological, 8 P.M.; Medical, 8 P.M.; Royal Institution of British Architects, 8 P.M.  
*Tuesday*.—Linnean, 8 P.M.; Belgrave Literary (E. Davy, on Electricity and Chemistry, second lecture.)  
*Wednesday*.—Society of Arts, 7*½*.  
*Thursday*.—Royal Society, 10 P.M.; Antiquaries, 8 P.M.  
*Saturday*.—Westminster Medical, 8 P.M.; Electrical, 7 P.M.

FINE ARTS.  
ROYAL ACADEMY.

THE president and members of this institution assembled, as usual, on the evening of Saturday, the 9th instant, to distribute the medals adjudged at a general meeting on the 1st. Among the visitors we observed Lords Abinger and Lyndhurst, Lord Chief Justice Tindall, Sir John Rennie, Sir J. M'Gregor, R. Vernon, Esq., Samuel Rogers, Esq., and Philip Hardwick, Esq. The president, Sir M. A. Shee, commenced his address by advertising to the loss the academy had sustained since their last meeting, by the demise of its illustrious patron, William the Fourth; whose loss (although supplied in the person of the beloved and amiable princess who now fills the throne) could not but be a source of the deepest regret to every person connected with the academy and the arts. Having concluded his preliminary observations, he proceeded to distribute the medals awarded to the various works of art, expressing the satisfaction felt by the members generally at the ability displayed by the students; but remarking, with regret, the want of energy and enthusiasm in the class of original compositions. The distribution was as follows:—

To Mr. E. B. Morris, for the best original Painting, the Gold Medal, and the Discourses of the Presidents Reynolds and West.  
To Mr. John A. Gifford, for the best original design in Architecture, the Gold Medal, and Discourses of the Presidents Reynolds and West.  
To Mr. J. Hayes, for the best Copy in the Painting School, the silver medal, and Lectures of Professors Barry, Ople, and Fuseli.  
To Mr. Samuel Taylor, for a Copy in the Painting School, the Silver Medal.  
To Mr. T. H. Harland, for the best Drawing from the Life, the Silver Medal, and Lectures of Professors Barry, Ople, and Fuseli.  
To Mr. J. Waller the Silver Medal was adjudged, but not given, in consequence of his having received a similar premium in the same class.  
To Mr. Thomas Burton, for a Drawing from Life, the Silver Medal.  
To Mr. ———, for the best Architectural Drawing, the Silver Medal, and Lectures of Professors Barry, Ople, and Fuseli.

To Mr. W. Snook, for an Architectural Drawing, the Silver Medal.

To Mr. A. J. Ashton, for an Architectural Drawing, the Silver Medal.

To Mr. J. Rivers, for a Model from Life, the Silver Medal.

To Mr. W. Carpenter, for the best Drawing from the Antique, the Silver Medal, and Lectures of Barry, Ople, and Fuseli.

To Mr. H. Le Jeune, for a Drawing from the Antique, the Silver Medal.

To Mr. Nelson O'Neal, for a Drawing from the Antique, a Silver Medal.

To Mr. G. Nelson, for a Model from the Antique, a Silver Medal.

The president afterwards delivered an eloquent discourse to the candidates and students.

## OLD PAINTING.

WE have been favoured with a view of a picture, deposited in the gallery of Messrs. Yates, in Bond Street, and said to be by Correggio. Although we are not sufficiently well acquainted with the works of this master to be enabled to pass a judgment upon it, we may notice, that the composition of the painting is similar to that of the St. John, by Correggio, engraved by Hollar, with some trifling alteration to suit the different character of the subject—a youthful figure caressing a goat, and called "Young Paul." A great power of chiaro oscuro, richness, and purity of tone, and the light floating tenderly over the picture, evince some of the characteristics of the master to whom it is attributed. Perhaps the drawing is too decided and energetic for him; at least compared with other well-known and authentic productions of his pencil. It has a pedigree, of course; the most important feature of which is, that it was at least 100 years in the mansion of a respectable family in the north of Ireland, whence it came into the possession of its present owner. When there is indubitable merit, we care little for the prestige of a great name, and this composition has great merit of a clearly original stamp. Whoever may have painted it, we have no hesitation in saying that it is not a copy, and that it is well worthy of the notice of the dilettanti.

## NEW PUBLICATIONS.

*Benjamin Webster, Comedian, Lessee of the Theatre Royal, Haymarket.* Painted and engraved by Henry Meyer. Kenneth.

WE do not remember to have ever had the pleasure of seeing this very clever performer, except upon the stage. As far as his various theatrical countenances enable us to judge, we should suppose that this must be a faithful resemblance of him.

*Finden's Ports and Harbours of Great Britain.* Part X. Tilt.

THE Preface, inserted in this Part, says, "The volume of Ports and Harbours of Great Britain, now completed, comprises, in a series of fifty engravings, views of most of the principal ports, naval stations, watering-places, and fishing towns, on the English coast, from Berwick-upon-Tweed to Plymouth." During the progress of this interesting work, we have frequently called the attention of our readers to the beautiful manner in which the Messrs. Finden have engraved the faithful though spirited drawings of Messrs. Bulmer, Cooke, Creswick, and Harding. As far as we are acquainted with the subjects, the editor seems to us to be perfectly justified in observing, "In the delineation of each place, the chief object of the artists has been to give a faithful view, to represent the place as it really is, and not to overstep the modesty of nature, for the sake of giving to their subjects the false ornaments of meretricious beauty." We entirely agree with

him, that "the sober delineation of truth is, in such a work as the present, infinitely preferable to the exaggerated representations of fancy."

### DRAMA.

**Covent Garden.**—The opera of *Amilie* rises every night in popularity, and draws crowded houses. That Stanfield has come forward to paint a grand scene for the Christmas pantomime, is much to the credit of all parties; a tribute paid by genius to the honourable effort to redeem the stage and re-establish the national drama. Power also goes to *Covent Garden* early in February. This is as it should be: those who, in public and private, adorn the profession, have but one line of duty to perform.

**Haymarket.**—On Thursday, "an original domestic drama, by Mr. Frederick Lawrance" (an author unknown to us, and not likely to be much better known if he proceed in the same line), was acted here. The name is *Pierre Bertrand*, and the hero, done by Mr. Ranger, very like his part in the *Romantic Widow*. Two ballads introduced by Mrs. Waylett were, of course, very delicious; and, as for the rest, the originality seemed to consist in the audience being convulsed with laughter at this serious affair; in which some of the performers themselves were occasionally compelled to join.

**Opera Buffa.**—On Tuesday, Ricci's *Il Nuovo Figaro* was produced at this theatre. In it the lovers of melody had a treat. The music throughout is exceedingly sweet; and we could name some half-dozen delightful airs which are scattered through the opera. The novelty in the *dramatis persona* was Signor Castellani, who, in spite of extreme youth and most unaffected nervousness, made a very successful *débüt*. His voice is about the quality and compass of Ivanhoff; his style, pure and feeling; and in tune and time, both in concerted pieces and in solos, faultless. These merits will, we have no doubt, render him a great favourite with the elegant audiences of this theatre. Of course we expect to see him, in a short time, better able to manage the business of the stage. On Tuesday his devoted attention to the orchestra was almost painful to witness: we understand it was his first attempt at singing with an orchestra, and, therefore, this will scarcely need an effort to overcome. Bellini, as *Leporello*, sung well, and played better. Franceschini, Mad. Bellini, and Signer Sanguirico, also contributed a fair share of voice to the opera; although the want of a good *prima donna* is the greatest drawback to the theatre. With a perfect orchestra, and so many excellent male vocalists, the inferiority of this lady department is much felt. We look the more anxiously for the much talked-of Schiaroni.

**Olympic.**—A pretty burletta, entitled the *Ringdoves*, in which Charles Mathews sustains two characters, one youthful and the other aged, was produced with perfect success on Monday, and has been played nightly during the week. It is very lively and amusing, and the less prominent parts are cleverly performed by Mr. F. Matthews, Mr. Brougham, and Miss Lee.

**Queen's Theatre.**—Mr. Forrester, of the *St. James's*, and Mr. Wyld, long since proprietor of the *Olympic*, have been added to this smart little company, which is very flourishing under the management of Miss Desborough.

### VARIETIES.

**A Scientific Spouter.**—Of this class, there are not a few nuisances in society. Men of

few ideas and many words, who, seeing nothing clearly, envelope their opinions in a jargon of verbiage, often utterly destitute of meaning, and never with any sense worthy of gathering. One of these fellows was quaintly described the other day by a gentleman, who had listened with much impatience to his engrossing the attention of a party for several hours. "Sir," said he, "if you had only to tell us that Sunday was a finer day than Monday, you would prolixly enounce that the morrow of Saturday last was more genial and salubrious than yesterday of the ensuing Tuesday." This whimsical impromptu silenced the philosopher.

**Caricatures.**—Three more H. B.s, Nos. 506, 7, and 8, have just been added to that copious storehouse of political humour. The first, entitled "The Rival Quacks," is a very good one, representing Lord John Russell looking wretchedly sick, with O'Connell on one side insisting on his taking his "black draught," labelled "Universal Suffrage, Vote by Ballot, Annual Parliaments," whilst a reserve box of "Repeal Pills," is seen under the table; and Mr. Wakley backed by Mr. Hume, on the other side, pressing three pills, inscribed "Abolition of Tithes." Wakley's figure is capitally hit off, and the reluctance of the patient, indeed the supposed feelings of the whole group, admirably expressed. The next is exceedingly droll; the Duke of Sussex and the Duke of Wellington, as old crony nurses, calling to remembrance the birth of the queen, blessing "her little heart," and chuckling over that "happy day, and the finger they had in the pie." The last is also an original invention: O'Connell, "a devotee doing homage," is kissing the pope's toe, his holiness being embodied in the noble secretary for home affairs, with Lord Morpeth and Mr. Spring Rice attending him as cardinals. In all three, to use a common phrase, H. B. is in great feather.

**Joan of Arc.**—With the above Pope Joan, has appeared from the same publisher's (Mr. M'Lean), a spirited whole-length by R. J. Lane, of Miss Huddart as *Joan of Arc*. The gallant bearing and striking action of the heroine are faithfully given, and in these (though we cannot have a picture of voice and manner also), the public will readily recognise some of the attractions of this effective and popular drama, one of the most interesting and beautiful of its kind ever sent upon the stage.

**South African Exhibition.**—We should not be paying our usual attention to youthful friends, did we not remind them and their parents of an exhibition which is, in our opinion, eminently calculated to please and instruct them. We allude to Dr. Smith's unrivalled collection of natural history, &c. at the Egyptian Hall. The animals, many of them rare, and some of them unique, are all but alive in their preservation; and not only are there the instruments, utensils, &c. of the natives, but figures of the natives themselves, Caffre and Hottentot, so well imitated, that the spectators may easily fancy themselves three hundred miles in the interior of the Cape. Sightings like these make indelible impressions on the mind, and are most valuable for the young.

**Sacred Harmonic Society.**—The concert for the ensuing week (the *Messiah*) is, we are informed, so much in request, that a repetition of the performance must take place to meet the public desire to hear it.

**Weather-Wisdom.**—We have had no tendency to storms about the middle of the month, nor was yesterday changeable and windy, but very fine weather. "The aspects on the 17th

and 18th shew winds, and probably snow. The 19th milder. The aspects are strong for snow or much rain, and also high winds about the 21st day. The 24th very gloomy, and high winds with heavy rain."

**Roman Antiquities.**—Some very interesting Roman antiquities have been discovered near Buckingham, evidently the remains of an ancient villa.

**Newspaper Paragraphing.**—In an account of a distressing accident by a coal-pit explosion, this week, the provincial newswriter says, that the sufferers were instantly blown into "everlasting eternity!"

**Pompeii.**—A discovery of a novel description and much interest has recently been made among the ruins of Pompeii. Near the street of the Tombs, where the excavations are carried on with most industry, the vestibule of a house has been exposed, with four Mosaic pillars, fifteen feet in height. Relics so curious excite great expectations of what the house itself may contain.

**Astronomy.**—In the Philosophical Transactions for 1783 there is a paper of the late Sir William Herschel, in which he shews (p. 273) the probability of the solar system having a progressive motion towards a point in the heavens near  $\lambda$  Herculis (the right ascension of which star, in the beginning of 1830, was  $260^{\circ} 58'$ , and its declination, at the same time,  $26^{\circ} 14' 41''$  N.) This gives a singular interest to the following extract from a letter of the Baron Struve to Professor Schumacker, which is published in the "Astronomische Nachrichten," No. 331, p. 315:—"Argelander has lately sent to the Academy of St. Petersburg a paper, which is of the greatest importance, since it puts beyond doubt the progress of the solar system towards a point, that agrees very nearly with that assigned by Herschel, namely, towards

$260^{\circ} 50'$  R.A. with a probable error of  $3^{\circ} 29'$   
 $31^{\circ} 17'$  Decl.  $26^{\circ} 29'$

The result rests upon the proper motions of 300 stars; each of which exceeds the yearly amount of  $0^{\circ} 1'$ . This is the fruit of the short existence of the Observatory of Abo, contained in the excellent catalogue of 500 stars, published by Argelander, in 1835."—*Communicated to the*

**Hydraulic Telegraph.**—A Mr. Winhaw is stated in the newspapers to have invented a telegraph, on hydraulic principles, which may communicate intelligence, accurately and speedily, by means of the rise and fall of water in tubes laid down between the points of communication. The expense of the apparatus is estimated at 200l. per mile. When the scheme is brought to bear, and carry news in this way, how literal will be the line of Shakespeare—

"There is a tide in the affairs of men!"

and, then, the rapid answer—

"If taken at the flood leads on to fortune!"

and the delay of a reply by return of water-level—

"Neglected, all the current of their lives  
Is bound in shallows," &c.

**St. Paul's Church, &c.**—At length the national disgrace of making this noble national cathedral a penny show, is removed. It will henceforward be gratuitously open to the people for several hours daily (viz. from 9 to 11, and from 3 to 4 o'clock); and, as the Tower is also to be seen at the cost of 1s. instead of the impost of 3s., we may fairly congratulate the public on the prospect that no other public place can be much longer shut in its face. Under proper and necessary restrictions, against

which there cannot be a murmur, it is gratifying to find this reproach passing away.

**Literary Correspondence.**—The following is handed about the *Blue Circles* just now, we know not with what foundation, as a genuine copy of a note from a distinguished authoress to her printer, who is engaged on the novel entitled "Love," announced by Mr. Colburn.

"Dear Sir,—How comes it that I have had no proofs of Love from you, since last Saturday. I have waited with the utmost impatience.—Yours, &c. C. B.—"

### LITERARY NOVELTIES.

Mr. Morison, of Liverpool, formerly of Perth, announces a Work tracing the Origin and History of all Religion, of all Idolatry, Astrology, and Superstition, in every form.

Longitude.... 3 51, W. of Greenwich.

### TO CORRESPONDENTS.

\*.\* We request our friends and readers in and about London, to take notice that the stamped *Literary Gazette* may now be sent postage free throughout the circuit of the twopenny post, or about ten miles round the metropolis. Thus, subscribers over all this populous district may receive their *Gazette* early on the day of publication, from which convenience we have the pleasure to anticipate a considerable accession to their number.

In our report of Mr. Hunter's historical paper relating to Sir Thomas de Gournay, in the last number of the *Literary Gazette*, we should have stated, that he had derived much information on the subject from several documents found by him among the ancient records of the Exchequer, which connected and explained some of those in the *Federal*.

### ADVERTISEMENTS, Connected with Literature and the Arts.

### BRITISH INSTITUTION, PALE MALL.

NOTICE TO EXHIBITORS.  
All Pictures and Works of Art intended for Exhibition and Sale, must be sent to the Gallery on Monday the 15th, or Tuesday the 16th of January, 1838, between the Hours of Two in the Morning and Five in the Evening, after which time no Picture or other Work of Art will be received. Portraits and Drawings in Water-Colours are inadmissible.

WILLIAM BARNARD, Keeper.

In 2 vols. 8vo., embellished with numerous Plates, price 8s.

**EXCURSIONS in the ABRUZZI**

and NORTHERN PROVINCES of NAPLES.

"These volumes will be received with welcome. The ground

over which Mr. Keppel Craven has passed is not a portion of

that high road on which our English travellers are wont to play

the game of follow my leader. To very many the scenes described

will be perfectly new. We take leave of our author, with hearty

good wishes for the success of his work; and that when he again

rides forth on his excursions we may be by to see."—*Albion*.

Price One Guinea.

**THE ORIENTAL ANNUAL.**  
 By the Rev. ROBERT CAUNTER, B.D.

With Twenty-two Engravings, from Drawings by the late  
 William Daniel, R.A.

Elegantly bound in morocco, large paper, with Proof Plates,

8s. 6d.

"In point of binding, gliding, and ornament, 'The Oriental

Annual' has hitherto been gorgeous, while its plates are always

in a first-rate style, and eminently illustrative of the glorious

East. The volume now before us, we are inclined to think, excels

in these particulars."—*Monthly Review*.

"It is scarcely possible to imagine a more beautiful book: the

binding is perfect."—*Literary Gazette*.

Charles Tilt, Fleet Street.

## THE BOOK OF GEMS, Vols. I. and II.

Is offered at One Guinea per Volume, published hitherto at 11. 11s. 6d.

"It is indeed a 'Book of Gems.'"—*Times*.  
 "This book is happily designed, happily executed, and happily named."—*Morning Chronicle*.  
 "Its contents are not for a year, nor an age, but for all time."—*Examiner*.  
 "A work which, for beauty of illustration, and elegance of arrangement, has seldom, if ever, been surpassed."—*John Bull*.  
 "It is, indeed, a 'dainty' book."—*Spectator*.  
 "It is characterised by the perfection of a chaste elegance."—*Metropolitan*.

## THE MOST SPLENDID BOOK OF THE SEASON.

In super-royal Quarto, containing Thirty Plates, bound in morocco, price Two Guineas,

## THE HIMALAYA TOURIST.

Comprising Thirty Views of Scenery in India, principally among the Himalaya Mountains, from Drawings on the Spot, by Lieut. G. F. White, of the 31st Regiment.

Edited by Miss EMMA ROBERTS,

From the Private Journals of several Gentlemen, who have kindly placed them at her service.

## VIEWS IN CONSTANTINOPLE.

Early in 1838 Messrs. Fisher and Co. will publish Part I. of a Series of splendid Views in Constantinople and its Neighbourhood, from highly finished coloured Drawings on the Spot, by THOMAS ALLON, Esq.

In naming Mr. Allon as the Artist, the Publishers feel that they offer the surest guarantee to the public for the beauty and fidelity of the subjects selected, in the Architectural, Landscape, and Figure Departments.

38 Newgate Street, Dec. 1837.

London: Fisher, Son, and Co.

## CURIOSITIES OF LITERATURE.

By I. D'ISRAELI, Esq.

Tenth Edition.

Edward Moxon, Dover Street.

Price 3s. 6d., Part III., of  
**A HISTORY OF BRITISH BIRDS.**  
 By WILLIAM YARRELL, F.L.S.,  
 Secretary to the Zoological Society.

This work will be completed in 3 vols. 8vo. will contain a greater number of British Birds than has yet been included in any work on the same subject, will be illustrated by an Engraving of each Species, and additionally embellished by numerous Vignettes.

"Had we not been able to judge from Mr. Yarrell's previous performances, this single commencing specimen would have taught us what to anticipate from him on so generally interesting a subject. But the pattern is so truly excellent that we have only to hope there will be no falling off; improvement we hardly think possible. Nothing can exceed the nature and spirit of the illustrations. The birds are living in wood, and you might fancy you could pluck a feather from the cut. No. II., issued since the above was written, continues the work in the same admirable style."—*Literary Gazette*.

John Van Voorst, 1 Paternoster Row.

## BUCKE'S HARMONIES OF NATURE.

In 3 vols. 8vo. price 31s. 6d. in cloth boards.

**THE BEAUTIES, HARMONIES, and  
 SUBLIMITIES OF NATURE;** with Notes, Comment-  
 aries, and Illustrations; and occasional Remarks on the Laws,  
 Customs, Habits, and Manners of various Nations.

By CHARLES BUCKE.

A new edition, greatly enlarged.

"A work singularly rich in all that can touch the heart and interest the imagination."

London: Printed for Thomas Tegg and Son, Cheapside;  
and sold by all Booksellers.

Price 3s. 6d.

**THE DOMESTIC LEDGER.**

A New System of Housekeeping, whereby an Analytical Digest is obtained of the Week's Accounts, under the distinct heads of Board, House and Personal Expenses, with a Summary of the whole for the year. A Cellar Book, on the most simple yet effective plan; Estimates for Household Expenses, calculated for different incomes; Memoranda for Engaging and Diminishing Servants, with a variety of new and important matter, Tables, Memoranda, &c.

**THE AUTHORS OF ENGLAND.**

Pictures large and beautiful Plates, engraved in the new  
 Double-etching Style, with Biographical and Critical Sketches.

By HENRY F. CROLEY.

Author of "Memorials of Mrs. Hemans," &c. &c.

A new Edition with India Proofs, 81s. 6d.

"The Authors of England" is an Annual of the first mag-  
 nitude and importance. It is composed of a group of fourteen of  
 the most popular writers of poetry and fiction in our own times,  
 departed as well as living—each set in a rich frame-work of  
 tasteful device. The volume is superbly got up; the embossed  
 cover, with its handsome badge, is very elegant."—*Spectator*.

"This, for the present season, shall be our annual. The plates  
 are exquisitely engraved."—*Athenæum*.

Charles Tilt, Fleet Street.

In 12mo. price 4s. cloth boards, uniform with the "Anatomy of

Incompleteness," 2d edition, enlarged.

**DR. MACNISH'S INTRODUCTION TO**

PHRENOLOGY; illustrated by Thirty-four beautiful

Engravings on Wood, by Mr. Bruce of Edinburgh.

"Probably of all the works I have mentioned, Dr. Macnish's  
 Introduction will be found the most useful."—*Combe's Lectures*.

"We are proud of the addition of Dr. Macnish to the list of  
 phrenological authors, and regard the present work, in point of  
 interest and utility, as quite equal to those by which he has  
 already established a well-founded literary and philosophical re-  
 putation in Britain and America."—*Phrenological Journal*.

"It is clearly and beautifully written, and full of valuable in-  
 formation."—*Edinburgh Evening Post*.

"We have met with a work on the subject which could  
 scarcely the type to acquire so easily an intimate knowledge of the  
 science as this does."—*Boston Free Press*.

"Few can candidly read this treatise without being convinced  
 of the truth of phrenology."—*Dublin General Advertiser*.

"For simplicity, brevity, and comprehensiveness, we have seen  
 no work of a similar kind which will equal it."—*Manchester*  
*Times*.

II.

In 18mo. cloth, price 2s., 2d. edition.

**Brigham on Mental Cultivation.**

With Notes by Macnish.

Glasgow: Published by John Blythman and Co.; and sold by

Whittaker and Co.; and Simpkin and Co. London.

## SPLENDID ANNUALS, UNDER THE SUPERINTENDENCE OF MR. CHARLES HEATH.

### GEMS OF BEAUTY: 1838.

DISPLAYED IN A SERIES OF TWELVE HIGHLY FINISHED ENGRAVINGS OF "THE PASSIONS,"

From Designs by E. T. PARRIS, Esq.

With Fanciful Illustrations in Verse,  
By the COUNTESS of BLESSINGTON.

Imperial 4to. 1*l.* 11*s.* 6*d.* richly bound.

"In point of embellishments, this Annual has always been one of the most brilliant of its class, and well does it maintain its reputation. It is rich in glowing beauties, and will, no doubt, be one of the most fascinating volumes of the season."—*Naval and Military Gazette*.

"Each design is accompanied by a fanciful illustration in verse from the pen of Lady Blessington, who throws a charm over every thing she touches, and has done very much indeed for this volume."—*Examiner*.

"A work possessing such rare charms, both of art and poesy, as to entitle it to stand by itself. One guinea and a half can never be more satisfactorily expended than in purchasing this imperial 4to. volume. Parris's engravings of the Passions, and the Countess's illustrations, will continue always to be admired among the costliest decorations, and the loveliest triumphs of the Muses that the amateur can select."—*Monthly Rev.*

"It is impossible to conceive any thing more characteristic or more beautiful than the plates from Mr. Parris's designs."—*St. James's Chron.*

### HEATH'S PICTURESQUE ANNUAL: 1838.

CONTAINING

A TOUR IN IRELAND, BY LEITCH RITCHIE, Esq.

[(Which completes this Portion, in 2 Vols.)]

WITH NINETEEN BEAUTIFULLY FINISHED ENGRAVINGS,

FROM PICTURES BY T. CRESWICK, Esq., AND D. M'CLISE, Esq. A.R.A.,

Super-royal 8vo. elegantly bound, 1*l.* 1*s.*; India Proofs, 2*l.* 2*s.*

"This volume yields the palm of beauty to none of its competitors."—*British Magazine*.

"Among the Tourist Annuals, the 'Picturesque' claims the first place for the truth, delicacy, and freshness of Creswick's miniature landscapes, and the vigour and grace of M'Clise's wild Irish girls. Creswick has acquired great force of pencil, and his effects of sunset and storm have the impressive beauty of nature; the atmosphere is moist, warm, and bright, and the light clouds float in ether."—*Spectator*.

"We know of no work on Ireland written in a better spirit."—*Court Journal*.

### THE KEEPSAKE: 1838.

ILLUSTRATED BY A SERIES OF HIGHLY FINISHED ENGRAVINGS.

Super-royal 8vo. 1*l.* 1*s.*; India Proofs, 2*l.* 12*s.* 6*d.*

"This Annual comes forth as usual, in very splendid trim. Its binding is the *véritable couleur de rose*, and its contents are, metaphorically speaking, of the same complexion. The 'Keepsake' commends itself to all the boudoirs of the united kingdom."—*Morning Herald*.

"To say that it ranks high among the Annuals would be faint praise: we think the 'Keepsake' ought to be placed at their head."—*Observer*.

"A very enchanting collection of poetry and romance, just suited for fire-side relaxation in the gloomy winter months. The 'Keepsake' must find its way into a large proportion of elegant drawing-rooms, even were it not recommended by its illustrations. The binding is in excellent keeping with the light and lively character of the contents, and is by far the most chastely beautiful which we have yet seen."—*St. James's Chron.*

In super-royal 8vo. price, elegantly bound, 1*l.* 1*s.*; India Proofs, 2*l.* 12*s.* 6*d.*

### BOOK OF BEAUTY: 1838.

With highly finished Engravings.

Edited by the COUNTESS of BLESSINGTON.

"The volume before us, externally, is a gorgeous specimen of bookbinding, or rather, we should say, of fancy silk-weaving. Its azure and gold are worthy of the looms of the Gobelins, and might serve as a pattern of tapestry for the chambers of the delicate dames whose portraits form so large a part of the ornaments *oblige*s of the book."—*Globe*.

"The 'Book of Beauty' is one of the few splendid gift-books that becomingly sustain their reputation; indeed, it is the chief and best of them. Its dress this year is more gorgeous than ever, and its imperial state kept up by an increased attendance of taller pages."—*Examiner*.

LONDON: LONGMAN, ORME, AND CO.

### REVIEW OF NEW BOOKS.

*Private Correspondence of Sarah, Duchess of Marlborough, illustrative of the Court and Times of Queen Anne; with her Sketches and Opinions of her Contemporaries, and the Select Correspondence of her Husband, John, Duke of Marlborough.* 2 vols. 8vo. London, 1838. Colburn.

JANUS should have been the god of history; for never did any science present two such different faces. Nothing can be more imposing than the external—there are wars and rumours of wars, victories, councils, principalities, and all the honour of high-sounding names; but, behind this, is kept the domestic diary, full of “trivial fond records;” and the small feelings of ordinary existence are found to have as great, if not greater, influence than those high passions, which at first appear to be the sole potentates. Rivalries, trifles, jealousies—these are the real materials of history. The volumes now before us contain a number of curious and interesting letters, which are now published, for the first time, from the MS. collection of Archdeacon Coxe. One of the most remarkable portions of the work are “the characters of her contemporaries,” full of the shrewdness which marked even the prejudices of the duchess. Anne had all the faults of her father; she was narrow-minded and obstinate; needing to be governed, and yet, like all weak minds, impatient of the authority to which it had been their own act to submit. We can well understand the duchess to have been an unpopular favourite: she was haughty, uncompromising, and sarcastic. She knew the point of a bitter truth; such as the reason she alleged for not giving up the diamond-hilted sword of the duke to his extravagant grandson—“for fear lest he should pawn it.” Yet her very faults are those which we respect: there was neither bitterness nor hypocrisy about them; and there can be no question that, during the Marlborough administration, the prosperity of the country was at a high pitch; and, if a foil were wanting, it was to be found in that which succeeded it. It is impossible not to be touched with the affectionate tone of the duke's letters. In the midst of his most hurried hours, in all his triumphs, there is the perpetual yearning for home.

“*The Duke to the Duchess of Marlborough.*”

Nov. 8, 1706.

“I have had the happiness of yours of the 19th by the express, but your long letter, writt by the former post, I believe is gone to the army, which I shall not have till I come to the Hague, which I hope will be to-morrow, though the wind is now very contrary. I embarked yesterday at Antwerp with a fair wind, and was promised I should be this day at the Hague. I deserve better from you than to have you make excuses for a long letter, for when they are on a subject that sometimes gives me the spleen, yet, coming from you, they are welcome; for, believe this truth, it is only you can make me end my days happily. You say Madam 218 is grown so well satisfied with you, that she intends to write. There is no name to those figures in my cypher. I know the young man you mention for 307’s\*.”

\* Possibly Lord Aylesbury.

daughter. I have heard a good character of him; but whilst his father lives his revenue will be very small, so that on all accounts I pity him. What you have been told of 112's loaves and mutton, is, I believe, very true. You know I have no great value for him; but it is certain that, to the best of his understanding, he is very honest to the common cause. In my next, from the Hague, I shall hope to be able to tell you when I intend to leave that place, for should I stay to finish the treaties begun, this whole would not suffice. But Mr. Stepney being both capable and honest, I shall put every thing into his hands. I am so fond of some pictures I shall bring with me, that I could wish you had a place for them till the gallery at Woodstock be finished; for it is certain there are not in England so fine pictures as some of these, particularly King Charles on horseback, done by Vandyke. It was the Elector of Bavaria's, and given to the emperor, and I hope it is by this time in Holland.”

“Hague, Nov. 9.

“Since my arrival here, I have had the happiness of two of yours. I am very sorry, by one of 91 (Godolphin's) letters, that my letter will not have the effect I desire on 83 (the Queen), for I am sure I have writ it with all my heart, in hopes it might have set every thing right. I do not suppose that 48 (his brother) can live long. However, it is an ease to me in having desired it might be for life, for should I die, I know him so well, that he would be turned out, which thought would make me uneasy, since I cannot but have the uneasiness of a brother. You may be sure that I have that love and consideration for you.”

We add part of a curious account of Queen Anne's leaving Kensington, with the duchess, after her husband's death.

“When we came into the coach, she had a very extraordinary thought, as it appeared to me. She desired me to send to my Lord Treasurer, and at once beg of him to take care and examine whether there was room in some vault to bury the prince at Westminster, and to leave room for her too. I suppose it was where her family, and kings, and queens, had been laid; but, in case there was not room enough for the prince and her too, she directed another place to be buried in. When we came to St. James's, I carried her privately through my lodging into her green closet, and gave her a cup of broth; and afterwards she ate a very good dinner; and at night, I found her at a table again, where she had been eating, and Mrs. Masham very close by her, who went out of the room as soon as I came in; but with an air of insolence and anger, and not in the humble manner she had sometimes affected of bedchamber woman. I attended the queen upon this affliction with all the care that was possible to please her, and never named Mrs. Masham to her; and she would make me sit down as she had done formerly, and make some little show of kindness at night when I took my leave; but she would never speak to me freely of any thing, and I found I could gain no ground; which was not much to be wondered at, for I never came to her but I

found Mrs. Masham there, or had been just gone out from her, which, at last, tired me, and I went to her seldomer. Before the prince was buried, she passed a good deal of time looking into precedents, that she might order how it should be performed, which I thought unusual, and not very decent; but she naturally loved all forms and ceremonies, and remembered more of them than I could even do; but she had bits of great tenderness for the prince, and I remember she wrote me once a little note, at which I could not help smiling, that I should send to my Lord Treasurer to take care that some door might be taken down at the removing of the prince to Westminster, for fear the dear prince's body should be shook as he was carried out of some room, though she had gone long jumbling journeys with him to the bath, when he must feel it, and when he was gasping for breath. I did see the tears in her eyes two or three times after his death, upon this subject; and, I believe, she fancied she loved him; and she was certainly more concerned for him than she was for the fate of Gloucester; but her nature was very hard, and she was not apt to cry.”

The character of Queen Anne, as drawn by the duchess, must be taken with some reservation; still none but a clever sketcher could so have painted the likeness.

“Queen Anne had a person and appearance not at all ungraceful, till she grew exceeding gross and corpulent. There was something of majesty in her look, but mixed with a sullen and constant frown, that plainly betrayed a gloominess of soul, and a cloudiness of disposition within. She seemed to inherit a good deal of her father's moroseness, which naturally produced in her the same sort of stubborn positiveness in many cases, both ordinary and extraordinary, as well as the same sort of bigotry in religion. Her memory was exceeding great, almost to a wonder, and had these two peculiarities very remarkable in it, that she could, whenever she pleased, forget what others would have thought themselves obliged by truth and honour to remember, and remember all such things as others would think it a happiness to forget. Indeed, she chose to retain in it very little besides ceremonies and customs of courts, and such like insignificant trifles; so that her conversation, which otherwise might have been enlivened by so great a memory, was only made the more empty and trifling by its chiefly turning upon fashions and rules of precedence, or observations upon the weather, or some such poor topics, without any variety or entertainment. Upon which account it was a sort of unhappiness to her that she naturally loved to have a great crowd come to her; for when they were come to court, she never cared to have them come in to her, nor to go out herself to them, having little to say to them, but that it was either hot or cold; and little to inquire of them, but how long they had been in town, or the like weighty matters. She never discovered any readiness of parts, either in asking questions, or in giving answers. In matters of ordinary moment, her discourse had nothing of brightness or wit; and in weightier matters, she never spoke but

in a hurry, and had a certain knack of sticking to what had been dictated to her, to a degree often very disagreeable, and without the least sign of understanding or judgment. Her letters were very indifferent, both in sense and spelling, unless that they were generally enlivened with a few passionate expressions, sometimes pretty enough, but repeated over and over again, without the mixture of any thing either of diversion or instruction. Her civility and good manners in conversation (to which the education of great persons naturally leads) were general enough, till, in her latter days, her new friends untaught her these accomplishments; and then her whole deportment was visibly changed to that degree, that, when some things disagreeable to her own honour or passion have been laid before her, she would descend to the lowest and most shocking forms of contradiction; and what, in any of a meaner station, would have been esteemed the height of unpoliteness. Her friendships were flames of extravagant passion, ending in indifference or aversion. Her love to the prince seemed, in the eye of the world, to be prodigiously great; and great as was the passion of her grief, her stomach was greater; for that very day he died she ate three very large and hearty meals, so that one would think that, as other persons' grief takes away their appetites, her appetite took away her grief. Nor was it less remarkable, where there was so great an appearance of love, the peculiar pleasure she took before his funeral in settling the order of it, and naming the persons that were to attend, and placing them according to their rank and to the rules of precedence, which was the entertainment she gave herself every day till that solemnity was over."

*The Duchess's Dogs.*—"1737. I am very fond of my three dogs; they have all of them gratitude, wit, and good sense; things very rare to be found in this country. They are fond of going out with me; but when I reason with them, and tell them it is not proper, they submit, and watch for my coming home, and meet me with as much joy as if I had never given them good advice."

*Life and Death.*—"1737. I am a perfect cripple, and cannot possibly hold out long: and as I have little enjoyment of my life, I am very indifferent about it. 1737. It is impossible that one of my age and infirmities can live long: and one great happiness there is in death, that one shall never hear any more of any thing they do in this world."

"1737. 'When I consider life, 'tis all a cheat,  
Yet, fooled with hope, men favour the deceit;  
Trust on, and think to-morrow will repay;  
To-morrow's falsest than the former day.  
Lies more, and when it says we shall be blest  
With some new joy, cuts off what we possess.  
Strange cozenage! none would live past years again,  
Yet all hope pleasure in what still remain,  
And from the dregs of life think to receive  
What the fresh sprightly running could not give.  
I'm tired with waiting for this chemic gold,  
Which fools us young, and beggars us when old."

"Verses of Dryden, which I think very pretty, and which most people have felt the truth of. 1737-8. I think one can't leave the world in a better time than now, when there is no such thing as real friendship, truth, justice, honour, or, indeed, any thing that is agreeable in life. 1738-9. I am so weary of life that I don't care how soon the stroke is given to me, which I only wish may be with as little pain as possible. 1739. As to my own particular, I have nothing to reproach myself with; and I think it very improbable that I should live to suffer what others will do, who have contributed to the ruin of their country: and when I am

dead I shall hear nothing of it, nor have the uneasiness, when I die, of parting with any thing that gives much pleasure. I have always thought that the greatest happiness of life was to love and value somebody extremely that returned it, and see them often; and if one has an easy fortune, that is, what makes one's life pass away agreeably. But, alas! there is such a change in the world since I knew it first, that, though one's natural pleasure is to love people, the generality of the world are in something or other so disagreeable, that 'tis impossible to do it: and, added to this, I am a cripple, lifted about like a child, and very seldom free from pain. 1740-1. As I have seen so much of a very bad world, I must own I have no taste left, but to have what is just necessary to support myself and those that I am obliged to take care of, which are a great many."

*The Duchess's Opinion of her own Sex.*—"1737-8. Women signify nothing unless they are the mistress (es) of a prince or a first minister, which I would not be if I were young; and I think there are very few, if any women, that have understanding or impartiality enough to serve well those they really wish to serve."

We are glad to see a *Life of the Duchess of Marlborough* announced from the pen of Mrs. Thomson; these Memoirs must embrace all that was most interesting in the time; and Mrs. Thomson has already shewn how much she can do in making a work at once standard and popular.

*The Ages of Female Beauty.* Edited by Frederick Montagu. London, 1837. Tilt.

LIKE the bunch of fine flowers last week presented to the Queen, whose hard names flourished in all the newspapers, being evidently intended for learned botanists, and not for popular information (since no common reader could, under such learned disguise, tell a primrose from a piony, or a daisy from a daffodilly, or, indeed, discover any one component of this jaw-breaking nosegay); like these flowers, we repeat, the wintry ornaments of the publishing trade seem still to be blowing in full luxuriance. We have here another holiday production; and, it must be owned, nearer the appointed time than some of its contemporaries, we cannot call them, but some of the Christmas Annuals, which make their appearance about the dog-days.

The poet has told us that it is a delightful task to rear the tender thought, and teach the young idea how to shoot; and surely it must be a more delightful task to edit all the ages of female beauty. What a happy fellow Mr. Montagu must have been—must be! From the infant bud to the blooming maiden; from the blooming maiden to the blushing bride; from the blushing bride to the fruitful mother; from the fruitful mother to the calmly closing plant of life's evening, he has pictured and painted them all. And to his series we have but one objection, viz, to what he denominates "third age," and illustrates by the individual "*Coquette*." Now, to our mind, coquette is not exactly an age in female beauty. It may be an accident, and has furnished a good subject for the pencil of Chalon, whose personation of it, with the hearts of lovers strung as a necklace, is very fanciful; but it has no business to be reckoned as one of Beauty's seven ages. Shakespeare's list might be appealed to; but it is altogether of a different kind, and not generic, as this is. We have also to notice a little bit of a slip—the Preface, where the editor, speaking of "the mother's tender cares,

the widow's tears," &c., adds, "these may, however, be said to be the *bright lights* of the picture:"—so mourned "the dame of Ephesus her love;" but, is this a fair description of all widows' tears? Fie, Mr. Montagu!

Our remarks are not intended for criticism—the matters are not of consequence enough—but merely in good-humour; and we proceed to shew how the literary portion of the work is performed. Of the poetry, we cannot find a more pleasing example than Barry Cornwall's lines on Infancy, as sweet and beautiful as that period of life. The picture, by F. Corboux, represents a child, cradled in a sea shell, and rocked by the ocean wave.

"In a shell, upon the sea,  
Wherefore lieth 'Infancy?'  
Is the world a shoreless ocean?—  
Is our life a restless motion?—  
By the grave and cradle bounded?—  
Cast on perilous waves unsounded?  
With a sky of tempests o'er us,  
And the dark 'To come' before us?—  
May we not, with spirit fine,  
Pass the dim horizon line,  
And soar into the distant blue?—  
Let us try if verse be true:  
Let us try what dreams may bring:—  
Cherub Infant, lend thy wing.

Now, what see I?—First, a girl;  
Small, fair, and priceless as a pearl,  
Which some Indian diver findeth  
In the darkness of the sea.  
When the weight of waters blindeth  
Every one, save only he!

Then thou com'st,—a little maid;  
Gay, demure, or half afraid  
Of the dire school-mistress frown,  
And the whisper of her gown,  
When she moves athwart the room,  
Shedding a majestic gloom:  
O'er the light of youthful eyes,  
Like a vast cloud in the skies!

What is here,—with eyes of jet,  
And hid in hearts? a wild coquette?  
Ah! pass on:—she will not deign  
Long in poor caprice to reign;  
But will bloom anew before ye,  
Heroine of a gentler story!

And see,—a fuller dawn appeareth!  
Now the girl to woman neareth,—  
Now the light hath lasting power,—  
Now is come her awful hour.  
Doth Fate fill her days with honour?  
Doth Grief cast his dart upon her?  
Joy or Pain—what see ye, now,  
Written on a bridal brow?

Peace! Now close the chamber-doors;  
Silence, lie upon the floors!  
Pure Lucia! guard her life;  
For the bride is now a wife,  
And the wife hath grown a mother;  
Her delights have found another,  
Fairer and beyond the rest.  
Look! what lieth in her breast?  
Look! Around its eyes are hung  
The smiles she owned when she was young,—  
All that in bright confusion lay,  
And witch'd us in her earlier day.

Time moves! A grief, that does not speak,  
Now sits upon her altered cheek.  
Her eyes are dim with widow's tears;  
Her heart weighed down by a mother's fears.  
Still young, still fair, and full of grace,  
She yet doth keep her lonely place:  
Nor rank, nor gold can tempt her pride  
To shine a second time a bride.

.... Time speeds! The soft meridian light  
Descendeth slowly into night;  
June fades; wild Autumn sends her showers;  
And, clad in glooms, December lowers,  
Or sheds his whiteness on the land.  
The widow?—ah! she takes her stand  
Upon an elder higher range;  
And findeth still a graver change.  
Decrepit,—old,—she draweth near  
The last scene of her long career.  
Her child by other ties is bound:  
Another race is on the ground.  
She groweth deaf: she groweth blind:  
Oblivion creeps upon her mind.  
What need of more? A little mood,—  
A prayer,—and all her tale is told!"

There is a moral attached, which, to do the poet justice, we confess we cannot very clearly comprehend, but we give it for the sake of more acute readers.

"... Deep in the infant bud, a mystic cell,  
 Prophetic Nature moulds the future flower:  
 So on thy forehead, Child, she writeth well  
 The good and evil of thine after hour.  
 Read thou this verse. For once the future lies  
 All open to thy sight, like summer skies.  
 Read; nor forget.—Let not the story be  
 A lesson to the world, and not to Thee."

Before we make our prose selection, we have to mention that the engravings are very graceful, and do honour to the burin of Ryall. Besides those we have named, there are a pretty vignette, Childhood, and the Mother, by F. Corboux; the School Girl, by Mrs. G. Ward; the Maiden, and the Old Lady, by Rochard; the Bride, by Chalon; and the Widow, by J. W. Wright; all of which do credit to the talents of the artists.

The literary contributions are by Mrs. Fairlie, Boyle Bernard, the Author of "Cavendish," the Author of "the Poet's Daughter," Lady Stepney, Mrs. Ince, Mrs. Norton, E. R. Moran (with whose popular prose we are well acquainted, though this is the first time we recognise his talents as a poet), Lady Hastings, the Author of "Thaddeus of Warsaw," and the Editor. From these our choice is immediately made, not merely from the talent and feeling displayed in the "article," but from the peculiar nature of the subject, and the celebrity of the writer. We allude to "the Mother," by Mrs. Norton, and we are sure the public will peruse, with much interest, her delineation of a mother's anguish, when excluded from the society of her children. Mrs. Norton's tale describes the mother as doomed to this sad fate through the infidelity of her husband, which leads to a separation. The rest, relative to her and her three children, may be gathered from the following:—

"'Merry Isabel' was the title early given to Laura Davenel's daughter; and her laughing blue eyes and frolicsome ways seemed to confirm the nickname: but the little one was pale and sad-looking, shrinking from strangers, and rarely ever mingling in the sports of his companions. A mournful woman was Laura Davenel before that babe was born; and, nursed amid a storm of sorrow and bitterness, caressed amid tears, or silently rocked on an aching and cheerless heart, it seemed as if the spirit that saddened his home had left its traces on his countenance. So it was, that he was his mother's favourite. She still clasped fondly to her bosom the high-spirited and noble-looking boy, whose childhood had been one long dream of pleasure to her—she still caressed the fluttering, wildly joyous little Isabel, whose witty sayings were the pride of the nursery; but dearest to her heart was the pale unnoticed child, who alone of her three treasures had made her feel the terror and anxiety of a feeble and sickly infancy—who alone was yet too young to repeat, with the heedless quickness of childhood, the broken sentences of grief which fell from her—'Your father forsakes us, my Willie!' How often, and how tearfully, were those words uttered—with none to hear but Heaven, and the innocent that lay cradled in her arms!"

She leaves her home, and the law gives the children to the father; on him she calls in vain.

"Her letters were returned unanswered and unread: the verbal remonstrances made by her brother-in-law, and one or two intimate friends, met with but one answer, that the law made him master of his own children, and that he would be accountable to no one for the trust. Still they were near her, and she gleaned, from day to day, intelligence respecting them.

She was not yet hopeless: it seemed so impossible that she should be entirely parted from those who were part of herself! So impossible that the father of those little beings whom she had borne in pain and nursed at her bosom should inflict on her and them a separation as complete as that of death! So impossible that the best and purest happiness of her life had vanished in that sudden and unexpected wreck! She bore it as people bear most great misfortunes; too much stunned at first to feel all the agony. It has been truly and beautifully expressed, that

'Light to our feelings is the immediate blow,  
 And the first pang the weakest of our woe:'

and so it was in the case of Mrs. Davenel. Years of heart-break were before her, but the present was filled with vague and feverish plans for a re-union with her children, and wild as those plans were, they enabled her to bear up against the separation from them."

Soon after Lady Davenel informs her:—

"The fact is, a most cruel story has been circulated, that the cause of your quarrel with Charles was his displeasure at your going to Davenel's, and that he would not come there himself,—in short, that Davenel is still too fond of you, and that you are with us against my will. Now, do not look so indignant, dear Laura, or, as if you would jump out of the window and leave us all. Davenel thinks it would do you good to exert yourself and go out, and he wishes us to be seen together; and as this report is gaining ground every day, we had best put an end to it at once, by going out, and by allowing the truth to be known. Lady Davenel was young and enthusiastic (as may be supposed, from this naïve expectation of silencing the world's slander): nevertheless, as it was the wish of those to whom she owed much, Laura obeyed. They appeared together, and those who had heard or repeated the story, whispered and stared, or whispered and smiled, and endeavoured to make up their minds what they would do. Those who principally cared about pleasing Lord and Lady Davenel washed the story from their memories as from a china plate; those who had always envied Laura, or whom she had treated coldly, perhaps rudely, during her jealous frenzy, were glad of the opportunity of cutting her dead, and persisted in believing every thing, and in wondering at her boldness and treachery to her sister-in-law, 'poor dear Lady Davenel;' and not a few, while they expressed their utter disbelief of the scandal against Laura, and their conviction of the fault being on the husband's side, charitably declared that, at the same time, they could not much wonder at it, or pity her, as she was 'such a very uninteresting person;' indeed, they wondered how Col. Davenel had ever contrived to fall in love with her. Feverish and dispirited, Laura continued to move through this crowd of sympathising acquaintances, till one evening, when suddenly accosted with the sentence, 'How is your little girl? I was quite sorry to hear of her illness.' A cold chill smote the mother's heart; strangers knew more of her child's fate than she did: she had not even heard of this sickness: it was sudden,—an inflammation of the lungs, brought on by exposure to a shower of rain. Laura Davenel became frantic with anxiety: it was impossible that her husband would push his vengeance so far as to refuse her permission to attend on her sick child: she wrote to him one of those wild and mournful appeals which experience might have taught her were vain: all day she paced restlessly up and down her room, awaiting his reply—the day-light stole

away—and, in the dim sadness of the autumn evening, visions of terror and distress passed before her eyes; the restlessness of despair rose in her heart; her child, her 'merry Isabel,' was ill, perhaps dying, and she waiting, passively, permission to go to her bed-side! She would depart instantly; they dared not refuse her admission. She rose, and, attended only by her maid, crept through the streets which led to what had been her home. With a beating heart she rung the bell; the door was opened, and hastily closed again. Mrs. Davenel waited; the door was again partially opened; voices were heard consulting in low whispers in the hall; the servant muttered an inarticulate message, that Col. Davenel had forbidden him to allow his wife to enter. Laura leaned against the iron rails. 'Is Col. Davenel within?' said she, faintly. 'Yes, madam.' 'Tell him I want to see my child—I will not depart till I have seen my child.' The servant obeyed, and five minutes of intolerable suspense passed away; then a slow stern step was heard, and Col. Davenel himself stood at the entrance. His face was livid with rage. 'You have made me the subject of abuse and ridicule,' said he, 'and now you will only expose yourself; go back to my brother, and those who have encouraged your follies, for, so help me God, if you stand there all night, you shall not come in.' Laura Davenel could not speak; she flung her arm wildly across the space between them; felt the grasp of his fierce hand, as he undid her hold, vainly attempted to utter the name of her child, and sank, insensible, to the ground. Lord Davenel wrote to his brother. 'Your conduct,' said he, 'is that of a madman; your vengeance that of a fiend: if I were to consult my own feelings, I would hold no communication with you: but the misery of your most injured wife compels me to act against my own convictions. I beg to inform you, from her, that she consents to forego all legal proceedings for a separation, on condition that the children are restored to her. She offers to take them to any part of England you may point out, and to obey any directions you may give. So much for her own offer. For myself, I beg to say that as the addition to your income was made with a view of increasing the comfort and respectability of your home, and not to be squandered away in payment of the extravagances of a popular singer, I shall withdraw it on receipt of your refusal to agree to these terms.' Lord Davenel's letter was returned in a blank cover, and, in a few months from that date, Col. Davenel's embarrassments had made him an inmate of the King's Bench Prison. The two boys were suddenly and privately sent abroad, and placed at a French *pension* of the meanest and cheapest class, and the bright and lovely little Isabel was left to the care of La Bertolini, who daily visited her father, accompanied by the child of his unhappy and outraged wife. These events occurred while Laura was at Davenel Park, and as she perused the letter containing that miserable intelligence, she exclaimed, passionately, 'This, at least, need not be suffered! This, the laws of a Christian country will protect me against! I am not to live to see my innocent and lovely child abandoned to the care of a worthless woman!' Again was the struggle of the weak against the strong ineffectually made. Laura Davenel commenced proceedings at law, demanding the care of her infant daughter, and stating the circumstances under which the child was placed. Colonel Davenel was ordered to produce the child in court, and hope, the

hope of justice, once more beat restlessly in Laura Davenel's heart. In vain! The case was admitted to be a hard one; much sympathy was expressed in the sufferings of the young and blameless mother: much interest excited by the little gay unconscious child; but the result was to leave things precisely as they were: the infant daughter of these divided parents was stated to be under the father's authority, and continued to reside with that father's mistress. Mrs. Davenel was advised to appeal to a higher court. Again the tedious process of the law was gone through, and again, buoyed up by the encouragement of her professional advisers, and the cheering and comforting words of friends, the bereaved mother permitted herself to hope. Meanwhile the removal of her two sons, from the jailor-like guard under which they had been kept at home, gave Mrs. Davenel, as she imagined, a safe and easy opportunity of communicating with them. She wrote fondly to her eldest-born, the high-spirited and noble little Charles: she inquired into the minutest particulars of their education, their employments, their amusements. Already a vague, and comparatively a happy plan, presented itself to her mind, of gaining the society of her darling Isabel, by the just and impartial decision of the court, and proceeding with her to some quiet spot, near the *pension* where her little boys were placed—there, in retirement and seclusion, to enjoy the only happiness left her upon earth—the endearments of her lost; her exiled, her forsaken children. How precious to her heart were the replies received from her young son! How affectionate and eloquent seemed the sentences of his brief and carefully written letters? how bitter and yet how soft were the tears she shed over the sentence, 'I am afraid Willie is forgetting your face, mamma, he was so very little, when we went away; but I tell him about you every day!' It was a sorrowful pleasure to receive those little awkwardly folded letters, with their cramped direction and foreign post marks, but it was the nearest approach to happiness which Laura enjoyed;—a happiness, alas! like all the rest, soon to be converted into bitter pain! One morning as the anxious circle assembled round the breakfast-table, and Lord Davenel distributed the letters delivered that morning, Laura saw him start and turn pale as he opened his own. Mechanically breaking the seal of the one just handed to her, she looked fondly down on Charles's well-known and welcome handwriting: the contents seemed to turn her heart to stone! Again and again her eye vacantly wandered from line to line, and still it seemed a dream to her;—that her young son, the idol of her youth—the caressing, joyous child, who had so doated upon her, should have written these lines:—

"'Mother,—My father found out that you wrote to us, and forbid us to write any more answers: I thought this cruel, and I told him so in a long letter; but I have got one from him in which he explains every thing, and now I know it is your fault that he is in prison, and has quarrelled with uncle Davenel, and is unhappy, and not able to afford to put us to a better school, instead of here, where we have hardly enough to eat, and no play-ground, or any comforts. It was very bad of you to make him quarrel with uncle Davenel, and not to care (as papa says) for any one but yourself. I will never write to you again;—papa has forbid me; and I can never tell Willie of you again, because you are not the kind mamma I thought you, but selfish and cruel, and it is

your fault we are here.—Your sorrowful son, Charlie.'

"Laura Davenel did not speak; she did not weep; but she looked up with a vague and wistful stare to the countenances of her companions. 'Oh! my dear Laura; do not look at us in that way,' exclaimed her sister-in-law, as she flung her arms round the wretched woman's neck and burst into tears: 'who has written to you? it was very wrong; I hoped to have broken it to you myself; she did not suffer.' 'Who did not suffer?' said Mrs. Davenel stupidly, and with an abstracted look. 'Little Isabel, poor Isabel! she died of exhaustion only; and quite, quite unexpectedly. She had become so subject to attacks of inflammation, and her chest so delicate, that the physicians both declared she never would have lived to grow up. Be comforted, dear Laura, be comforted: think of your boys; you have still Charlie and Willie to love and be with you hereafter; think of them—of them only.' A wild hysterical laugh burst from the lips of the bereaved mother; the double blow fell heavily on her heart; and for many days afterwards the ravings of the delirium alone gave a clue to the misery of her thoughts. It was during her slow recovery from the fever which had wasted her, that Lord Davenel sought her presence. There was an effort at composure in his manner which the trembling of his voice belied; and Laura smiled mournfully as she stretched out her hand to him. 'Do not fear,' said she, 'I fell so ill, that I am, as it were, removed beyond the joys and sorrows of this life, waiting on the shore and verge of a mortal world, till God shall please to call me: expecting nothing, hoping nothing; only looking across the dark ocean of death to eternity.' Lord Davenel hesitated, affected by her manner: at length he said, 'I have seen your husband; he is sorry for your state: the woman—La Bertolini—has forsaken him; she is gone to Bavaria with Count Armensperg: he was very lonely when I saw him.' There was a long and heavy pause. Lord Davenel resumed.—'I found him more willing to listen to what I had to say. I thought the best step was to obtain the recall of your boys: my brother's embarrassments are cleared off,—and—and the children are in England.' 'They are here,' said Laura, wildly; 'I feel it; I know it. Oh! my God, I thank thee,' and she dropped helplessly on her knees by the couch on which she had been lying. 'Be calm, dear Laura, said Lord Davenel, as he raised her in his arms, 'be calm, and you shall see them; and in a few minutes more the two little boys entered. They stood once more before her! They for whom she had pined through so many feverish days and tearful nights; for whom she had wept and prayed in vain! They were dressed in the deepest mourning; in mourning for 'Merry Isabel;' for her whose glance had been so bright and mirthful; whose birdlike voice seemed only tuned for joy; whose frolic laugh returned strangely at this moment to Laura Davenel's memory, wringing her heart to bitter tears. Charles sprang to his mother's arms, and sobbed on her breast, melted by the distress he only half comprehended; but little William stood aloof, shy and embarrassed; he had indeed, according to his brother's words, 'forgotten her face.' In vain did Laura soothe and caress him; he replied gently, courteously, but as to a stranger. His natural timidity had been increased by a residence among those who neither felt nor cared for his infantine joys and sorrows; and the memory of the gentle face that had watched over his cradle had vanished like a

mist of the morning. His beauty, always of a fair and delicate sort, was gone: he looked thin, and weak, and terrified. The sight of him chilled Mrs. Davenel's heart. She leaned faintly back, musing on the last evening when she had parted with them; that evening returned as vividly as if it had been but yesterday: she saw the little flushed and slumbering face of her now altered child, lifted from her bosom to the arms of Lord Davenel: she saw the glistening curls of the restless Isabel, as she was lifted into the coach at Mr. U—'s door; she heard their light steps retreating in the passage, and her heart swelled again with the agony of that terrible parting. One there was who could never return!—one, whose eyes were closed in the dim silence and dust of the grave!—one, whose joyous 'good night!' should never more greet her ear; and one who recognised her not—one to whom, had she died also, she would have been but a faint and shadowy dream—one who watched her with a strained and forced attention, as if fearing to offend by not replying; and yet whose replies sank like the strokes of a dagger, cold and sharply painful to her heart. Laura Davenel did not rally: it was too late for mercy,—it was too late for joy,—too late for the blossoming again of those pure and holy affections so cruelly and vengefully nipped in the bud. The last words she ever spoke, were addressed to her children: 'Charlie, I am going from this world! be kind to, protect your younger brother! And Willie'—'Madam,' said the child, in a soft foreign accent, as he crept timidly to the bed-side.—'Oh! Willie,' said the dying woman, 'do not call me madam; call me mother.'

*The Scenic Annual for 1838.* Edited by T. Campbell, Esq., author of the "Pleasures of Hope," &c. 4to. pp. 69. London, 1838. G. Virtue.

THIS is another annual, and grown under the protecting glass of a distinguished poet within the short space of two months. We allude to its literary growth, for the plates are already quite familiar to us in "Beattie's Switzerland," "Willis's America," "The Waldenses," and one or two other publications. Next year, however, more time for the matter and some novelty in the engravings are promised; and, meanwhile, we must take the *Scenic* as we find it. Mr. Campbell has contributed ten of the papers in prose and verse, and as they are the prominent features of the volume, we shall offer our examples of its merits from them. The first is in verse, on the Cora Linn, so well known among the picturesque and beautiful waterfalls which enrich the scenery of Scotland. The stanzas are not quite so highly polished as we have been accustomed to see from the author's pen,\* but the thoughts are worthy of him and the subject.

"Cora Linn.

"The time I saw thee, Cora, last,  
'Twas with congenial friends;  
And calmer hours of pleasure past  
My memory seldom sends.  
It was as sweet an Autumn day  
As ever shone on Clyde:  
And Lanark's orchards all the way  
Put forth their golden pride.  
Ev'n hedges, busk'd in bravery,  
Look'd rich that sunny morn;  
The scarlet hip and blackberry  
So prank'd September's thorn.—  
In Cora's glen the calm how deep!  
Its trees on loftiest hills  
Like statues stood, or things asleep,  
All motionless and still.

\* For examples, the division of the lines in the sixth stanza, "one continuous;" and the false quantity of Niagara in the seventh.

The torrent spoke as if his noise  
Bade earth be quiet round,  
And give his loud and lonely voice  
A more commanding sound.

His foam, beneath the yellow light  
Of noon, came down like one  
Continuous sheet of jaspers bright,  
Emblazon'd by the sun.

Dear Linn ! let loftier falling floods  
Have prouder names than thine,  
And king of all, enthron'd in woods,  
Let Niagara shine.

Barbarian, let him shake his conchs  
With reeking thunders far,  
Extended as th' array of hosts  
In broad embattled war.

His voice appals the wilderness :  
Approaching thine, we feel  
A solemn, deep melodiousness,  
That needs no louder peal.

More fury would but disenchant  
Thy dream-inspiring din :  
Be thou the Scottish muse's haunt,  
Romantic Cora Linn !

T. C."

Our prose extract is an interesting one, from Campbell's remarks on Burns.

"The poetic genius of Burns, nourished on scanty learning, and inspired by nature herself, will furnish a text for the philosopher, who speculates on the influence of book-acquired learning on gifted minds of the first order. Milton, on the one hand, stands an example of the poetic benefits of much learning; whilst Shakespeare and Burns confront and refute the assertion, that 'a little learning is a dangerous thing.' That much learning is covetable by a poet, has long ceased to be my opinion. In the bare toil of acquiring it, his mind exudes much of its natural strength and sensibility; but that some learning is useful, has been illustrated by Shakespeare, whose mind—an alembic of sweets—distilled more of the essential odours of classic mythology, and more of the beautiful in classical history, than the minds of a thousand pedants could have collected. Burns, apparently still less learned than Shakespeare, never looked back to ancestral inspiration, but was himself an ancestor in poetry. I cannot give up my classical partialities, but I confess the truth of Burns's words, when he derides those 'who think to climb Parnassus' hill by dint of Greek;' and his strokes of nature bring down my conception of the quantum of learning that is needful for a genuine poet, to the lowest point. I could point out in Burns's songs, thoughts exactly similar to those of beautiful Greek epigrams, of which Burns could have never heard. Here Burns wrote Greek poetry without having learnt the very characters. When nature takes genius by the hand, she always conducts her pupil to the tender and beautiful, and by a shorter road than the learned languages. If I had found Burns at a Greek grammar, I should have pulled him away from it. Selden, one of the greatest of scholars, could afford to say that no man is ever wiser for his learning. This is untrue in a strict sense, but it is true in a more general view, for we know that the natural weakness of the mind is only made more rickety by a load of learning. The best of Burns's poems, in my opinion, is his 'Tam o' Shanter.' It was said of the most perfect Greek sculptures, that they seemed to be rather melted than chiselled marble. In like manner, this poem always appears to me as if the poet had not written but improvised it; as if he had never blotted a line or clipt off a fragment of its language, but had cast it off unpremeditated from the glowing mould of his imagination.

"T. C."

*The Modern Pythagorean; a Series of Tales, Essays, and Sketches.* By the late Robert Macnish, LL.D. With the Author's Life, by his Friend D. M. Moir. 2 vols. 12mo. Edinburgh, 1837: Blackwood; London, Cadell.

THIS is a very interesting and entertaining work: interesting in its first volume, which contains the biography of Dr. Macnish; and entertaining in the last, which is a collection of various clever and very popular papers, which he furnished to "Blackwood's Magazine." Of the latter, we shall say nothing more than that they well deserve to be republished in this conservative form, for which the public have reason to be grateful to their editor.

The Life is written in a tone and spirit which at once reflect honour on the talents and the feelings of the author. The judgment he has exercised on his materials, and the genuine friendship which has dictated his comments, have presented us with all circumstances worthy of being known, and in a manner becoming the subject. There is an unaffected simplicity about the narrative which has greatly charmed us; nor have we been less pleased with the air of truth—truth warmed, but not distorted by affection—which pervades the statement of every fact and transaction. The correspondence introduced is also of a delightful description; and, indeed, we rise from a perusal of the whole with increasing esteem for the writer, and deeper regret for the loss the republic of letters has sustained in the premature death of one of its ornaments, and his lamented friend.

The "Anatomy of Drunkenness," and the "Philosophy of Sleep," have conferred on Dr. Macnish a European reputation, which will not be diminished by these less elaborate productions, nor by the more intimate acquaintance with his private character. It would lead us, however, into too much detail were we to attempt to follow out the particulars as drawn by Mr. Moir; and we must, therefore, leave the traits of his childhood and youth, the story of his medical and literary labours, and the sad close of his personal intercourse with society in an early grave, to the heart-touching language of his excellent biographer. It must suffice us to select a few illustrative extracts, and simply notice, that Macnish was born of highly respectable parents in Glasgow, where he was educated and settled, and that he died on the 16th of last January, in his 36th year.

Speaking of his boyhood, Mr. Moir says:—

"His memory was an exceedingly repentive one, and he was diligent in storing it, both by reading and observation. A subject once known was seldom, if ever, forgotten by him. As was customary at the time in classical seminaries, the principal, nay almost the exclusive attention of the pupil was directed to the acquisition of the Greek and Latin languages, and in these he made fair progress; but, in after years, he has been known to lament that so much time and study were expended on what—even making allowance for the profession which he eventually followed—he could not bring himself to regard otherwise than as merely secondarily useful. In this I never agreed with him; nor, without these acquisitions, which he appears to me to have very much undervalued, could even he have done what he did, or have been the writer which he proved himself in after years. But this is not a proper place to enter into any disquisition regarding the utility of classical attainments; and I am rather inclined to think that this view of the subject was never strongly taken up by my friend himself, until he had half-linked himself, in the latter years

of his life, with that section of the literary community who look upon all subjects with a jaundiced eye, beyond the narrow pale of direct and immediate practical utility—a view which would at once, if carried to the extreme, nullify painting, poetry, and music, destroy many of the finest feelings of the heart, and throw into the shade a great part of whatever tends to beautify or embellish human life. Certain it is, that he looked back upon his school years as to a dark season of drudgery and labour; and although pride might stimulate his exertions to keep pace with his class-mates—and it did so—yet the accomplishment of the labour afforded little pleasure; and very probably the original elasticity of his mind was injured by the forced assiduity with which he pursued tasks, which to him must have been in a great measure pleasureless and mechanical. Certain it is that, in his boyhood, he gave no indications of that mental enterprise and curious felicity of thought, which afterwards characterised him, and which shewed him, when shuffled among the plain shillings of mankind, to be one of the very few on whom nature has stamped the impress of genius."

That genius is as much exhibited in his familiar letters as in his most careful performances—they belong to the best class of epistolary writing. We copy an example at hazard:—

"Glasgow, 22d October, 1831.

"My dear sir,—This being a very wet day, and having it in my power to send off this letter, at least as far as Edinburgh, I have determined to write to you a few lines. But, in the first place, let me ask you if you are dead or alive? If you are dead, write me (if you can) at once, and try to excuse your long silence. If you are not dead—which I hope—equally write, if it were for no other reason than to let me know why you have not written. I dare say, after all, you have been something like myself, very busy for some months past; with little leisure on your hands to waste on such a rigmarole fellow as I. \* \* \* Your stanzas addressed to Ianthie are quite equal to any thing you ever wrote. They are full of tenderness and poetry, and must delight every reader. What an impulse love gives to poetry!—for I am sure those beautiful stanzas were written under that feeling, which is said to be very delightful, although I am sure if I had the misfortune to be in love, I should be confoundedly unhappy. And yet under such very ridiculous circumstances (a man in love is always ridiculous,) I ought to be a great deal happier than you, for I have not a particle of your gravity and gentlemanlike melancholy, but, on the contrary, am always absurdly good-humoured, except when I run myself out of money, a thing which happens once and away. But a truce to philosophising. Philosophers are either knaves or asses; and as I am not the former, I suppose no alternative remains for me except ranking among the latter. \* \* \* What is Blackwood about now? I must try and write him an article, or he will be a black-balling me without mercy. Do you think if I were to ask him to republish in a separate form my tales from his Magazine he would do it? I fear to ask, now that I have got into his bad graces—a plague on my own stupid head! \* \* \* By the by, talking of Aird, what is he about? It is a great pity to see a man of his powerful genius so utterly lost. There is something utterly horrible in the idea of one like him wasting his time in the attempt to hammer Latin and Greek into the scone of some brainless blockhead. If such an

infernal destiny were mine, I would hang myself. But it never could be mine; for, rather than submit to it, I would be a knapper of his Majesty's granite on the highway, or shoulder a musket and face the devil. Have you heard lately of that curious production of genius, *De Quincy*? I suppose still writing for *Maga* at the rate of a quarter of a page per day. Knowest thou the name of the writer of the *Physician's Diary*? I have more than once heard it attributed to yourself. It has been exceedingly popular, although I do not like it so well as most people. I question much if it is written by a medical man. I was going to say something about Reform, but am sick unto death on the subject—therefore, let it rest in peace. There is to be a great public meeting on the green on Monday, and I hope the day will be such as this—one of rain and wind. This will keep the orators cool, and save a great deal of eloquence and stinking breath.

I am thinking of trying my hand at a sermon, which a clergyman in town has promised to preach, if I will write it. The duties of husbands and wives to each other, is the subject I have fixed upon. This will not require much gospel or scriptural knowledge. As soon as I do it, I mean to take all my friends to hear my discourse delivered *ex cathedra*. I have fixed upon this subject, because I am perfectly ignorant about it, and therefore more likely to be original.

"Glasgow, Nov. 1831.

"My dear sir,—I wrote you my last letter while confined to the house by bad weather. I am now confined by a vile cold in the head, which has gone down to my chest, and annoys me a good deal. Thanks to myself for this, for I owe it to sheer carelessness in being out late at night, supping with a set of bachelors. This is the great advantage you married folks possess over us. You become quite regular and orderly, staying at home with your wives, and going to bed early, and not quite seas over, as we honest bachelors are enticed to do. Do not suppose, however, from this, that I am going to get married, for I look upon a wife as an encumbrance, fully as great as a walking-stick, and not quite so useful. Not but there are exceptions, as you know, not to your cost, but to your own great happiness. This last sentence I insert both because it is true, and that it may save me from getting a scold from your own excellent wife, when I next see her. Talking of wives, by-the-by, let me congratulate you upon the birth of your son. God bless the little chap! I think a virtuous and amiable woman must be a poetess, for what the plague is virtue but poetry. It follows, then, that poetry is virtue; and such being the case, no person who can write (or think or speak) poetry, must be hanged in future, or even suspected of a crime. Q. E. D. There is sound logic for you. We are getting on well with the *Anatomy*. When you see the new edition you will allow it to be much improved. I have been converted into a believer in spontaneous combustion, by the mass of evidence in support of the phenomenon. I have also a slight wipe at temperance societies, but only a slight one, for I think they deserve credit for good intentions. My sublime acquaintance, Tom Atkinson, has published his '*Chameleon*,' in the style of the annuals; and a most elegant affair it is, so far as exterior goes. I believe I am answerable for the publication, for Tom sent me all the MSS. to read; and I returned them to him with the highest commendations without having read a single page. You see the advantage

of a good wide conscience. I now make a practice of praising every thing written by asses. When I condemn a thing, I think I am paying the author a compliment, as it is a proof I have read his work. After all, block-heads are useful animals, and should not be abused. I am a huge favourite with all the literary idiots about Glasgow; and I impute it solely to this absurd system of flattery, by which they are gammoned into a belief that they are men of genius. The system answers two purposes. It makes them imagine themselves clever, because I say so—even I myself; and it makes them suppose me clever, seeing that I have judgment to admire their great talents. It was while supping with one of these intellectuals that I caught cold—a punishment, I suppose, for the hypocritical praises I bestowed upon them. When did you see Professor Wilson? I wonder what he is about. What a sad pity it is, that, with one of the most powerful and beautiful minds ever formed, an intellect overflowing with the divinest poetry, and blended pathos, and humour, and philosophy, he should not have tasked it more than he has done! It is really an outrage upon nature, who has so bountifully gifted him, to waste these vast powers as he has done, instead of consecrating them to some immortal work. Hogg is rhyming away in Fraser. I do not know what sort of affair his last is, for I have not yet read it. I see those masculine feminines, the damsels, have brought out a couple of volumes. What an itch for writing these ladies have! I should not like to marry one of them; confirmed blue-stockings. What a lot of them there are in Edinburgh! In fact, I think the Edinburgh women are confoundedly disagreeable, speaking in a general way, on account of their blue-stocking propensities. They have a tremendous opinion of themselves, which accounts for there being so many old maids in the Modern Athens. Our Glasgow ladies are nice and ignorant, and do not plague one with learning. On this account I greatly prefer them to the self-conceited damsels of the metropolis. Women should never be as wise as men."

The latter portion of this volume is much occupied with Dr. Macnish's phrenological opinions; which we will leave to those who like them, and copy a specimen of his poetry, not, as far as we can remember, previously published. It is thus introduced:—

"Be the reader, however, reminded, that it was only on paper that our hero was so potent. Although naturally fond of society, for the amusement it brought him, he might be considered abstemious both in eating and drinking; and, although so often together on occasions that prompted the circulation of the bottle, I never once saw him, in the slightest degree, under the influence of wine.

"*Bacchanalian Song.*

"Who cares a potato for Solon or Plato,  
Those dull philosophical pedants of yore?  
A glass of good stingo is better, by jingo!  
Than all their flash sayings, their wisdom, and lore.  
What is gruff Aristotle to a well-plenished bottle,  
With daffy can Socrates ever compare?  
If grief should attack us we'll call upon Bacchus,  
Renown'd for his hatred to sorrow and care.  
Let's all set a brewing strong ale, and blue ruin  
In puncheonful studiously let us distill.  
For sound man or cripple, there's naught like a tippie:  
Have it, ye lush coves! and swig off your fill:  
For who cares a potato for Solon or Plato,  
Those dull philosophical ninnyes of yore?  
But Anacreon the jewel he took to his gruel,  
Voting care an encumbrance, and wisdom a bore!  
Ye mealy-faced noodles, ye soft-livered doodles,  
Ye tea-sipping quakers come answer us, pray,  
What makes us pugnacious, good-humour'd, sagacious,  
But tipping the jorum and soaking our clay?"

Accursed by the muses is he who refuses  
Each day to get muggy at Lushington's bar;  
Or cheer with good toddy the soul of his body,  
And wage with dull sense and sobriety war.  
The soul needeth fuel, and drink is a jewel,  
Which wise men and true can ne'er value enough;  
Blue devils it scatters, tears sorrow to tatters,  
And floors in a jiffy despair and such stuff;  
If aught should perplex us, bamboozle, or vex us,  
Heavy-wet will assuredly give us relief;  
Rum, brandy, and whisky, or Hollands so frisky,  
Oh, these are elixirs for banishing grief!

From the bard of Teios, or from the bard of Erin, such strains were in character. From the one, we could expect

*Επι Λοσιώνις τι ποίημα,  
Στοιχείας Ξίλου προτινών*

and from the other,

'Come send round the wine, and let points of belief;  
but who could have looked for such a ditty from the author who has so forcibly and so fearfully anatomised the brutalising influences of drunkenness? *Nemo omni hora sapit.* "'

"Pitched on a different key, is the following beautiful little lyric. In versification, there is a resemblance to the olden times of Surrey, Sidney, and Drummond; but, although subdued to an under-tone, we find all the passionate aspiration of Byron. Many a fortunate poetical reputation has been founded on a much more questionable substratum than

"*The Lover's Secret.*

"Thou walk'st in tender light, by thine own beauty made,  
And all thou pass'st by are hidden in the shade;  
Forms fair to other eyes appear not so to me,  
So fully glows my heart with thoughts alone of thee.  
I dream of thee by night—I think of thee by day—  
Thy form, where'er I go, o'ertakes me on my way:  
It haunts my waking thoughts, it fills mine hours of sleep,  
And yet it glads me not, but only makes me weep:  
It only makes me weep—for though my spirit's shrine is filled with thee, I know that thou can'st ne'er be mine:  
'Unconquerable bars,' rais'd up by fate's decree:  
Stand, and will ever stand, between my soul and thee!  
Hope long hath passed away, and nothing now remains  
For me but bootless love—its sorrows, and its pains:  
And to increase each pang, I dare not breathe thy name,  
Or, in thy gentle ear, confess my secret flame.  
Hope long hath passed away, and still thou art enshrined  
A spirit fair—within the temple of my mind:  
If I had loved thee less, the secret thou had'st known  
Which strong affection binds, and binds to me alone.  
The secret thou had'st known—but terror, lest thy heart  
In feelings such as mine should bear no kindred part,  
Enchains my soul, and locks within its silent urn  
Love which, perchance from thee, durst meet with no return."

But we must conclude; and we cannot do so in a fitter way than by quoting the final words of the author.

"By the termination of 1836, Mr. Macnish had prepared and arranged his materials for a new and greatly improved edition of this his last literary effort,—when it pleased Providence to remove him from the scene of earthly exertion. The first intimation of illness, made by Mr. Macnish to his friends, was early in the evening of the second day of January; although it was afterwards learned, that, for two or three weeks previous to this, he had complained with astonishment, to more than one of his friends, of the great debility he felt, and which he could not account for. Notwithstanding these feelings he continued to go about in his usual way, although the weather was, at that time, particularly inclement. Shortly after dinner on the day mentioned, he had accompanied his father to visit some particular case of sickness, and, on his return, complained of slight pains in his chest, which, in the opinion of both, seemed merely muscular or rheumatic. On the following morning, he was unable to leave his bed, and his symptoms had assumed the usual characteristics of influenza—the epidemic then raging. Although feverish, there was nothing about his case to

create any particular uneasiness; and, in this state, he continued without much distress of any kind, and with scarcely any local pain. The pulse now became unusually rapid; and, having remained so for two or three days, gradually sank into a feebleness, which indicated extreme debility. Coma supervened; he spoke not, except when roused; and even then it was merely to answer the questions put to him. Within five minutes of his death he twice feebly called upon his father!—and life passed away without a struggle. This event took place on the evening of Monday, the 16th January, 1837; and so perished, in the prime of life,—for Mr. Macnish was only in his thirty-fifth year—and in the bloom of his fame, as well as of his professional usefulness, a man who could not be known without being beloved, and whom Scotland may well be proud to number among her gifted children. While the wounds of affection are yet bleeding freshly, it would be a painful task for me to enter, with minute circumstantiality, into the lights and shades of Mr. Macnish's character. To none beyond the circle of his own hearth could his death be a greater bereavement than to me; for, from the day of our introduction together, we had continued to pour our hearts into each other; and I loved him, as Saul loved Jonathan, with almost more than a brother's love.—The void, which he has left in my affections, can never be filled up; and it is a melancholy consolation to hang this garland of reminiscences on his honoured tomb—albeit only to wither there. But the name of Robert Macnish is embalmed in his own writings."

*Schloss's English Bijou Almanack for 1838. Album Tablets; with the Poetry of the same by L. E. L.; with illustrative arabesque Designs by T. H. Jones. London, 1837. A. Schloss.*

MR. SCHLOSS has this year surpassed himself. He has gone on adding improvement to improvement, till the big Annuals are eclipsed by this all but invisible luminary. Not invisible, either; for, among its appropriate additions is a magnifying glass, upon a microscopic scale, fit for the handling of Master Thomas Thumb, the offspring of old Gaffer Thumb, who (the said Gaffer) never saw such a literary production as this in the age in which he flourished, though it must have been eminently literary in small matters, as is proven by the biography of his immortal son. But, useful as this glass is, the public need not fancy that it is necessary to magnify the merits of the *Bijou*: they are infinite, unique, intrinsic, utilitarian, imaginative, poetic, and resplendent in art. So much effect within so diminutive a compass is enough to reconcile one to the doctrine of homeopathy, and even induce us to go further; since there is only a single dose required to induce the symptoms and accomplish the aim desired by the inventor, namely, the excitement of the passion of admiration, and a consequent stimulant of the organ of acquisitiveness, so that the patient cannot rest till possession of the object is obtained. Then, the fever being over, the convalescent reposes on Mr. Jones's very spirited and well-imagined arabesques, on the graceful poems of L. E. L., and on the likenesses of royalty and genius. Of the poetry we select one example from, and another to, the fair writer.

"Her Most Gracious Majesty Queen Victoria.  
"And has that young and graceful hand  
Empire o'er land and sea;  
Yet, though upon the lion's mane,  
Our little tome may be  
A fitting offering, calling back  
Thy childish days to thee.

A toy—a trifle—not the less  
Our fairy volume brings  
The heartfelt wishes for thy sake  
That wait on graver things;  
May every hour its tablets note,  
For thee wear angels' wings."

"To L. E. L.

"By John A. Héraud, Esq. Author of 'The Judgment of the Flood,' &c.

"Sappho of a polished age!  
Loves and graces sweetly fling  
Chastened splendours o'er thy page,  
Like moonlight on a fairy's wing.  
Feelings fresh as morning's dews,  
Breathings gentle as the May's,  
Verses soft as violet's hues,  
Once sported in thy happy lays.  
Sad is now thy plaintive strain,  
Melancholy is thy mood—  
Bring us back thy youth again!  
For Cheerfulness befits the good.  
Yet, if thou be sad—'tis well!  
If we weep,—'tis not in vain!  
Sighs, attuned to Sappho's shell,  
Allure us into love with pain!"

We have now only to speak of the various caskets, in which this miniature treasure is enshrined. Morocco, velvet, and embossings of gold: the purest white, the richest purple, the gayest scarlet, the most celestial blue: such are the materials, and the colours. So pretty, so fit for presents, so convenient to send, and so easy to keep; so curious on the boudoir toilette, so amusing on the drawing-room table, so \* \* \*—really, Mr. Schloss has much to answer for,—instead of *petty larceny*, it is downright robbery to tempt us to possess a Bijou for each of the dozen or two of friends, &c. whom we cannot help remembering and loving, and wishing to remember and love us, at Christmas.

#### MISCELLANEOUS.

*A Lecture on the Nature and Cultivation of the Medical Profession, delivered at the School, Flour Mill Lane. By George F. Morgan, A.M., Lecturer on Surgery in Aberdeen. Pamphlet, pp. 28. London, 1837. Highley.*

SURGERY, although a staid study, and a sober practice, has its heroes, just as tragedy has. Morgan v. Otway is the case now before us. The lecture opens with the history of medicine, which, according to the author, existed from "the earliest dawnings of the world," that is to say, previous to the world's existence. He then points out what a medical man ought to know—the "wall of adamant" by which the science is bounded, and the difficulties with which "every footstep taken" is surrounded. He then benevolently and modestly exclaims, "Look at the general condition of medical men—what are they?" The imperishable name of John Hunter is, as usual, called upon,—"for he loved truth, and wooed her with the unwearying ardour of a lover;" and anatomy is declared to be the "key-stone which binds together the different branches" of the medical lore—the shadowy foliage of a professional arch; while physiological learning, only a few years back, was "a perfect magic lantern of Will-o'-the-Wisp's." Chemistry, we next learn, should also be studied, because it "explains the nature and composition of the means by which the morbid state may have been altered or removed;" as if, Epsom salt being known to be a sulphate of magnesia, we become acquainted with the means by which a fever is abated or removed by it. "What would not the physiologist give," says the lecturer, "to be able to assign a use for the individual portions of the brain?" Now, there are very many able physiologists, and Andral and Broussais to boot, who think that such a desideratum is no more. Our lecturer is lofty when speaking of truth: "Wealth cannot purchase, talent cannot re-

fute, knowledge cannot overreach, authority cannot silence, her; they all, like Felix, tremble at her presence. Cast her into the seven-fold heated furnace of the tyrant's wrath—fling her into the most tremendous billows of popular commotion—she mounts aloft, in the ark, upon the summit of the deluge." The dreadful position in which he has placed the ministering spirit of knowledge shall not frighten us from wooing her; but we shall do it in modesty and in humility.

*Popular Treatise on the Structure, Diseases, and Treatment of the Human Teeth, &c. By J. L. Murphy. Twelve Engravings. Small 8vo. Pp. 203. London, 1837. Whitaker and Co.*

*Pocket Guide to the Preservation of the Teeth. By Andrew Nisbet, Surgeon-Dentist. 12mo. Pp. 53. Glasgow, 1837: W. R. McPhun; London, Cotes.*

MR. MURPHY professes to write a book of general utility, and in which many of the mysteries of the craft, more especially the succedaneums that are in use among dentists, may be found described. This he accordingly does in a most verbose manner, through a work of two hundred pages. Upon some subjects, more particularly the use of human teeth, eloquence becomes prominent over practice. "There is something," he says, "of a horribly revolting nature in the idea of having in one's mouth a lot of foul, dead men's teeth, torn from the putrid jaws of a *corps* (quære, *corps*?) by the *sacraligious* hands of a resurrectionist." So much for taste. Mr. Nisbet's work has less pretensions, and is better executed. It is a practical little manual. Both agree in recommending chalk as the best tooth-powder; but Mr. Nisbet remarks, too truly, brush and powder are of no avail where the coat of tartar is indurated: we must then seek the assistance of the dentist.

*Practical Remarks on the Diseases of the Skin, on the External Signs of Disorder, and on the Constitutional Peculiarities during Infancy and Childhood. By Walter C. Dendy, &c. &c. 8vo. Pp. 153. London, 1837. Henry Renshaw.*

IT will be a long time before medical men will agree upon a classification of diseases of the skin. If they are classed according to their causes, there are only diseases consequent upon external irritation and common irritation of the skin, which can strictly be called diseases of that structure; for how can we denominate as such, diseases which are symptomatic chiefly of disorder of the alimentary canal, or such as arise from original debility of the system, or derangement of the chylopoietic function? We are placed in a still worse category, when, like the author of the work before us, we introduce eruptive fever,—the great order *Eranthematica* of Mason Good,—into a classification of cuticular diseases. If, by classification, we can influence modes of thinking, there is no doubt that such a proceeding must often give rise to erroneous views. With Rayer's plates appended, Mr. Dendy's work would form an admirable manual. It is concise, clear, and judicious; but, as its obvious intentions are to avoid profusion of opinions and arguments, so it ought not entirely to supersede more comprehensive works on the subject.

*The Family Nurse; or, Companion of the Frugal Housewife. By Mrs. Child. 12mo. pp. 152. London, 1837. Bentley.*

THE name of Mrs. Child, whether real or fictitious, is well known to the public, as that of a successful writer upon various branches of Domestic Economy; and the work now before

us partakes of the same character of practical wisdom and utility as its predecessors. We extract a few examples.

"Never meddle with medicines, unless some disorder of the system renders them really necessary."

"In almost every disease, too much anxiety is expressed for the strength of the patient."

"Never wake an invalid from sleep to administer nourishment."

"A really good nurse must have a tender conscience, as well as a feeling heart."

"Invalids are bound to pay a kind regard to the comfort and convenience of those who nurse them."

And, lastly,

"If you find yourself seriously ill, send for a good physician;" which latter sentence ought to be affixed to the title-page of all works of the present class, than which we, however, seldom saw a more harmless one than the present. It is said, in the adopted phraseology, to be edited by a physician of eminence; but we think that none but a female pen could have propagated the following: "When the process of suckling is very painful to the mother, the milk is sometimes drawn out with sucking-glasses; if the child is fed with it, a supply will remain in the breast some time; whereas, if it is thrown away, it will gradually diminish till it ceases." The influence of fancy may go to a certain extent in producing such results, and akin to which, is a very common practise of burning the milk when a child is weaned.

The book contains the usual collection of receipts for food and drinks, for poultices, ointments, baths, &c.; all of which must be very useful in the nursery.

*Chemical Recreations: a Compendium of Experimental Chemistry.* By John Joseph Griffin. 8th edition. 8vo. pp. 326. 1838. Glasgow: Griffin and Co. London: Tegg and Son.

THAT this useful book has reached its eighth edition, is saying more for it than words possibly can. The present edition is, however, a great improvement upon former ones, having been rewritten, and illustrated by an additional number of wood-engravings, without which it is impossible to render the subject of chemical manipulation at all intelligible. It is, altogether, a manual well deserving of the encouragement which it has received; and possesses, too, an inestimable value for the young student, in the attention given to detail the most minute parts of the apparatus requisite in analytic and in experimental chemistry. Mr. Griffin is, we believe, now in London; and to young persons desirous of commencing a very interesting study, we can cordially recommend his collections of apparatus, for cheapness and completeness. We do this not as a puff, but because it is in justice due to his exertions.

*The Juvenile Budget; or, Stories for Little Readers, chiefly collected from the "Juvenile Forget-Me-Not."* By Mrs. S. C. Hall. With Illustrations by H. K. Browne. Pp. 306. London, 1837. Chapman and Hall.

WE have always pointed to Mrs. Hall as to one of the very best, the most discreet, most considerate, and purest of juvenile instructors. Well may she claim the merit that she never wrote a tale for the amusement of children without thinking of their improvement, and endeavouring to promote it by all the means in her power. All she has written has not only been so intended, but, what is rare to meet with, has been so executed. One portion of

her lesson never warred with a moral principle while she was ostensibly employed in inculcating another; while enforcing industry, for example, we never found her, as we have found too many others, allowing an under current of hypocrisy, or cunning, or envy, or any other bad feeling, not only to pass unproved, but to form an element of success for praise and reward. It is not easy to write for children. Mrs. Hall has done it in the ablest manner. The embellishments are very pretty.

*British Diplomacy and Turkish Independence; with a View of the Continental Policy required by British Interests.* 8vo. Pp. 65. London, 1838. Murray.

THIS very clear and able pamphlet displays more knowledge of the state of Turkey than we have seen in heavy volumes. The writer speaks from experience, and shews as much acumen as comprehensiveness of mind. We are not competent to decide on his political views; but we are sure that no one has a right to say a word on the affairs of the Porte, and its relations with the leading nations of Europe, without having read this publication.

#### ARTS AND SCIENCES.

##### GEOGRAPHICAL SOCIETY.

DEC. 11. Mr. Hamilton, president, in the chair.—Notice having been given at a former meeting that this evening would be devoted to reading papers and letters relative to Australia, there was a very numerous assemblage of members and others who take an interest in that country. In order more fully to illustrate the subject, all the best maps and plans were exhibited: among others, we noticed Mr. John Arrowsmith's lately drawn and excellent map of Australia, in two sheets, containing the whole of the most recent discoveries; Major Mitchell's map of New South Wales, marking its prominent geographical features, and engraved at Sydney; Plans of Port Philip, with the new settlement of Melbourne, on its north-eastern shore, and of the country for sixty miles around, now called County Bourke, as far as Gheburh, or Mount Macedon; of the Gulf of St. Vincent and the new town of Adelaide, laid down on a large scale, to shew the grants of land; and Mr. Dixon's plan of New South Wales, coloured to mark the boundaries of the various allotments made to settlers.—Read, extracts from a letter from Sir John Jeffcott, chief justice in the colony of South Australia, to Mr. Barrow, dated Adelaide, May 1, 1837. "The situation of the incipient city whence I now write is on the eastern side of St. Vincent's Gulf, in latitude 35° S. nearly, and about ten miles distant from Mount Lofty to the east, and six miles from the sea on the west; where H. M. S. Buffalo is now lying at anchor in Holdfast Bay,—so called from its excellent holding ground. Nine miles higher up the Gulf is Port Adelaide, the future harbour of the empire of South Australia. The country from the shore to Mount Lofty is nearly a level plain of fifteen miles in breadth, and extends about twenty-five miles from north to south. The land within this tract is of an exceedingly good description, both for sheep-farming and agriculture. The site of the town of Adelaide is admirable, commanding a fine view over a country resembling an English park, being only thinly wooded, which will save both expense and labour to the settlers. There are now about 1500 persons here; and the avidity with which all the land for the town, consisting of 1000 acres, in lots of one acre each, was bought up

at auction in the course of two days, every one fetching from 7l. to 10l., and the purchase-money paid into the colonial treasury, is, I think, a fair reason for predicting the eventual success of the colony."—2dly. 'On the Soil, and on the Natives of Port Philip,' by Captain Maconochie, R.N. "As far as can be judged from a short visit, it appears," says Captain Maconochie, "that this part of South Australia is much better fitted to become an agricultural country, than Van Diemen's Land. Roads may easily be made and kept; the plough can easily reach and bring up portions of the sub-soil, which, if not essentially inimical to vegetation, may thus mix with and contribute to correct the extreme lightness of the surface; and, if not liable to floods, the improvements in agricultural practice may be of permanent benefit. As a pastoral district it is, at present, in the highest repute; and if it can only be occupied without destruction to the natives, its prospects as a settlement may be deemed very fine. I saw a good many of these natives, but not, I was assured, a favourable specimen of the more distant ones, and the circumstances of the time (owing to the prolonged absence of two V. D. L. gentlemen, since ascertained to have been murdered) were not favourable to a dispassionate judgment of them. I certainly thought that amidst all their grinning, dancing, and corroborating about us and our night fires, there were indications of guilt, and fear, and anxiety, in all their demeanour. Others thought differently. The party around us, as we were encamped in the bush, were under-sized, but stout, with long chins, large mouths, rather thin lips, flatish nose, very clear and brown eye, thin eye-brows, brows marked with deep furrows across, short curly, but not woolly hair. Their legs were long, but thighs short, buttocks projected, but without the usual accompaniment of a large stomach, chests well developed, arms long and brawny, shoulders rather narrow, and colour coal-black. Altogether, they give the idea of considerable muscular strength and activity. They shewed much intelligence up to a certain point; nearly all spoke a little English, and were excellent mimics, smoking tobacco, and eating bread and potatoes, of both which they were very fond, but refusing spirits, and expressing great dislike to them. I thought they looked very cunning and suspicious, but, as I have already said, I was myself suspicious; yet the settlers all express great confidence in them. They are filthy in their habits, and great martyrs to venereal and scorbutic affections. The former was found among them when first visited this last time, and is the more remarkable as they are jealous of their women, and these are generally well conducted and reserved; the natives are short-lived. An idea struck me while talking with them, which may be thought fanciful; namely, that these poor creatures are very much the worse for having no wild beasts in their country. There is nothing to harm them, nor to force them into large societies. They are consequently distributed into small communities scratching the rocks and earth for a precarious existence (roots and shell-fish); squabbling rather than fighting with each other, and in a low state of civilisation; because their difficulties are of a passive, rather than an active character, a kind which distributes, rather than congregates them. Their greatest vice, also, infanticide, is of this shrinking, cowardly character, which retreats before a contemplated difficulty, rather than boldly meet it."—3dly. 'Extracts from the Journal of the Brig Rapid,' by Lieut.

G. W. Field, R.N. September 8, 1836.—“On approaching Cape Jervis, the south-eastern point of St. Vincent's Gulf, we were much struck with the rich and beautiful appearance of the country. The Cape terminates in a low point; but the land to the northward, as far as the eye can reach, is high and undulating, covered with verdure and scattered trees, many of them of a large size. On anchoring off *Yatagolanga*, we despatched the native women, whom we had taken on board at Kangaroo Island, to hunt; they returned the following day, with a buck kangaroo of the largest kind, called *boomeh*, which we found excellent eating. Dec. 22.—On our return from Port Lincoln, we took the brig into the harbour, and anchored in three fathoms water; and, soon after, two other vessels, of 300 tons burden, anchored alongside of us. I was much pleased at first seeing the site of the town of Adelaide. To avoid the possibility of inconvenience in the rainy season, it had been selected on a rising ground, at six miles distance from the sea, on each side of a small river, which, by clearing, would afford a running stream at all seasons. From the town, the sea is visible to the west, and a range of mountains to the east, whose highest point is Mount Lofty, at ten miles distance. Lime-stone is abundant, and good clay, for brick-making; while, lower down the Gulf, granite, slate, sand-stone, and gravel, may be procured. Thus, there will be no want of building material.” 4thly. ‘On the Political Geography and Geographical Nomenclature of Australia,’ by Captain Vetch, R.E. The extent and boundaries of empires, states, and provinces, and the still smaller divisions of the earth's surface, have but too generally arisen out of accidental circumstances, mere caprice, or, still worse, selfish considerations; so that the want of wise design and systematic arrangement in this department of politics is as manifest as it is unfortunate. In no division of the globe could a system of political geography be introduced with so much ease, or with so many prospective advantages, as in that of Australia; whence the writer would urge the necessity, as well as advantage, of an immediate adoption of a systematic arrangement for that country, by establishing, at once, the whole of the grand divisions into which Australia may be most appropriately apportioned. We must bear in mind that this vast island is 2500 statute miles in length, by half that quantity in average breadth; that it contains an area of three millions of square miles; and that it is only one-sixth part less than the whole of Europe. In forming the grand divisions, the following points should be attended to: 1st. That each should possess areas nearly equal.—2dly. That each should be as compact as circumstances will permit.—3dly. That each should possess a tract of sea-coast. The most simple mode of fulfilling these conditions, would be to divide the country, from east to west, into two nearly equal parts, and from north to south, into four equal parts; whence will result eight, or, if we please, nine grand divisions, giving each an area of about 330,000 square statute miles, or more than Spain and Portugal combined: these divisions being, of course, subject to slight changes in their extent so soon as the country shall be sufficiently explored so as to enable us to assume the great geographical features, as rivers, mountain ranges, &c. as boundaries of the provinces or states. *Geographical nomenclature*.—This is a branch of geography usually left to chance or caprice, and it will not be easy to find any department so left which has been

more abused. But, good taste and even common sense are concerned in rescuing Australia from a barbarous and nonsensical catalogue of names, which nothing but a positive necessity should tolerate. Whenever native names exist, and when those names may have existed for a number of ages, it appears something like sacrilege to disturb or change them. Such names, too, are generally significant, and often contain, in themselves, useful information as to the migrations of the human race and the former connexion which existed between tribes now far separated. They are also seldom vulgar or ridiculous, and the use of them would obviate the confusion arising from the repetition, for the hundredth time, of the rivers Thames, Trent, Tyne, &c. That Australia is not defective in native names, and good sounding names, may easily be shewn, e. g. *Monarú*, Anglicised, Brisbane Downs; *Colare*, Dalrymple's Marsh; *Ilawára*, Liverpool Plains; *Panuará*, Machelan Mount, &c.: with these also may be contrasted Reid's Mistaken Hill, Mount Disappointment, Back Stairs Passage, &c. The absurdity of South Australia, West Australia, and North Australia, is too evident to need mention. Surely, for the names of provinces some better might be found. If we must have recourse to foreign names, those of the first discoverers, as Torres, Dampier, Vlaming, Nuyts, Cook, D'Entrecasteaux, Flinders, have a prior claim to any others; their names being already familiarly associated with different parts of the coast. Before quitting the subject of Australia, it may be permitted to express regret, and even surprise, that so little progress has been made in inland discovery. After a lapse of half a century, we have not yet reached 500 miles inland from Sydney. British enterprise and perseverance have explored the frozen shores of America; and the central tracts of the burning and pestilential climate of Africa, in the midst of a dense, savage, and bigoted population: while the genial clime and thinly peopled wilds of Australia have failed to excite the enterprise of discovery, when, to all appearance, there is so much more prospect of success and utility. A very animated discussion ensued upon the subject of Australia, in which Sir John Barrow, Captain Fitzroy, Sir Woodbine Parish, and Mr. Wheelwright, took a part.

Sir John Barrow said, that, with reference to cannibalism, which had been alluded to in one of the papers read, in all his reading he had never met with a well-authenticated case of that horrid crime; nor did he believe any such was upon record. With respect to Australia, he had the gratification to announce to the Society, that her majesty's government had decided upon making a small settlement on the northern part of that country, to serve as a protection to our rapidly increasing intercourse through Torres Straits; and to enable us to take a share in the lucrative trade carried on by the Bughi Trepanng fishers from the Arrú islands, Celebes, &c., and generally throughout the Indian Archipelago.

Captain Fitzroy observed, that, with reference to the subject of the paper just read, it was not always so easy to give names to places; and had the writer ever found himself, as he had, on the summit of a mountain in Tierra del Fuego, where he unexpectedly came in sight of not less than two hundred capes, headlands, lakes, bays, islets, rocks, and shoals, to which it was necessary, for distinction sake, to affix names at once, he would hardly have complained of the “impertinence” and “bad taste” of explorers, in giving trivial names in a

newly discovered country; that, for his part, he considered himself fortunate in having had a list of a pack of hounds in his pocket at the moment, and he freely bestowed their names upon all the prominent points in sight.

The subject of steam communication with Australia having been mentioned, Mr. Wheelwright stated, that there could not be the least doubt that, ere long, steam-vessels would cross the Atlantic to the isthmus of Panamá; and again from Panamá to Sydney, stopping at Tahiti, which was about half way, for a supply of coal; and the voyage, being a distance of about 11,000 miles, would probably be accomplished in sixty days, or nearly half the time required at present; but that he himself was engaged in promoting steam navigation along the western shores of South America, from Valparaiso to Lima and Panamá, and there was every reason to hope that he would shortly accomplish his object. In reply to a question by Sir Woodbine Parish, as to the quality of the coal in Chile and Peru, he said, that he had been assured by Lord Cochrane, that he had himself used the coal from Chile on board his steamer, when in that country, in 1821; that coal was also to be procured at Guacho, in Peru, and at the island of San Lorenzo, in the bay of Callao.

Captain Fitzroy was happy at an opportunity being afforded him of bearing testimony to the unwearied zeal with which Mr. Wheelwright had pursued this object, which was fraught with incalculable advantages to our trade on the western coast of America and in the Pacific; and that he himself could report favourably of some trials made with the coal of Chile: that Mr. Wheelwright might be justly considered the representative, on this subject, of all the British interest in Lima; that he had come to England for the sole purpose of carrying his proposal into effect; and he sincerely hoped that a measure so admirably adapted for the commercial prosperity of those countries, might meet with the success it is deserved.

#### STATISTICAL SOCIETY.

SIR C. LEMON in the chair.—The first paper read was by Mr. Day ‘On the Wages of Printers.’ The general appellation given to individuals employed in the “arte and mysterie” of printing is letter-press printers: they consisted originally of but two classes—compositors and pressmen. The application of the “machine” to the noble arte has, however, created a third class, called machine-men. The occupation of the three classes is as follows:—1st. Compositors, or those who arrange the type from the author's MS.; 2d. Pressmen; 3d. Machine-men; both of which classes actually print the paper from the arranged types. Respecting the compositor, from the introduction of printing into this country in 1456 to 1774, little is known of the mode or rate of payment; in the latter year it appeared the compositor received 20s. for a week's labour. About the same period a system of paying by the 1000 letters was first established. It soon became general; and has continued down to the present times, with some modifications as to size, wherever this “noble and humanising art” is to be found. Compositors on newspapers have always received higher wages than those engaged on other work. In addition to the price per 1000, there are many additional charges, such as notes at the sides and bottoms of the pages; tabular statements; foreign languages; law works; parliamentary work: where the MS. is badly written an extra charge is usually

allowed. All alterations are paid for according to the time they occupy. Pressmen are usually paid piece-work. The number of journeymen compositors in the metropolis is 2000, and 500 apprentices; pressmen, 1000; machine-men, no return. There were comparative tables of wages, into which we do not think it necessary to go.—The other paper read was the report of the committee of the Society on the state of education in the circle of parishes immediately surrounding the site of the Society's rooms, and consisting of St. Martin's in the Fields, and the four parishes constituting the Strand Union under the Poor Law Act, viz. St. Clement's Danes, St. Mary-le-Strand, St. Paul's Covent Garden, and the district of the Savoy, the population of which amounts to 42,996, according to the census of 1831. An abstract of this report is unnecessary, its details being altogether local in their character. The committee observe, that, in anticipating the benefits which may arise from such inquiries, they cannot help mentioning one advantage beyond that of actually pointing out the real condition of education in the country. The want of good schoolmasters is now felt by all who are desirous of establishing schools. However anxious they may be to get them, they are not to be had. It has been the lot of the committee to find, not only schools ill conducted, with ignorant people at their head, but also intelligent persons pining away in a state of hopeless poverty, whose exertions might, under favourable circumstances, be turned to good account; and they conceive, that if their inquiries enable them to point out such, they shall be rendering a service of no small importance at the present time to the community. The following anecdote will illustrate the erudition of some of the teachers in the parishes under consideration. In the instance alluded to, all other information was denied to the committee except the number of the scholars; and the mistress alleged as a reason for not giving information, "that she did not like to be criticised;" and her brother, who came to support her refusal, said that the school was his sister's "bit of bread." When, in the course of argument, it was stated that no questions should be put to the mistress or her scholars, the answer was, "That would be a moral impossible."

## ELECTRICAL SOCIETY.

SATURDAY, Dec. 16th.—Remarks by Mr. Turpin, on a species of *Acarus* presented to the Académie des Sciences, at its meeting of the 30th Oct., 1837, describing the insect generally known by Mr. Crosse's naming and placing it in the order and genus to which it belongs, were read by the assistant secretary. After soothing the disturbed dignity of the Académie for noticing a subject so infinitely inferior to those which usually occupy its attention, the writer proceeds, in consequence of the notoriety so trifling an insect has obtained, and because "the description of another insect may add, in a trifling degree, to our entomological knowledge," to give the results of his microscopic examination, reflections on organisation generally, and observations on "the singular origin, or rather singular creation, of an animal so complicate, although microscopic, and so high in the organic scale;" but of these anon, should space permit. The single specimen in question had been preserved in spirits of wine. It appeared to the naked eye a small whitish speck: with a lens, an oval body, covered with long straggling hairs, could be distinguished; but when taken out of the

spirit, placed in white gum between two pieces of glass, and in the focus of a microscope magnifying about 280 times, the following appearance was presented:—the body oval; belly slightly flat; back very round; the skin of the back covered with an immense number of freckles or tubercles, from the largest of which issued a quantity of straggling hairs or bristles, most of them as long as the body of the insect itself. These, and the long head, gave it the appearance of a microscopic porcupine; no trace of stomach, ovary, or lateral pulmonary organs, could be distinguished. The anus was slightly perceptible by a small mark in the lower part of the abdomen. A large oval egg was plainly perceived similar to those which are found in the *Acarus sero* and *Acarus scabici*. The author here remarked on the singularity of the only specimen received by him from Mr. Crosse, of the insect which "he imagines he is able to create at will, and solely from the elementary particles floating in the atmosphere," affording material proof of the mode of its reproduction, similar to that common to the genus *Acarus*. The formation of the head, projecting from the fore part of the body, is rather difficult to understand: an upper-lip, serrated at the extremities, could, however, be perceived, beneath which issues a long pointed sucker, and, still lower down, two large mandibles, placed laterally, terminating in a point, and slightly curved; within these, having the same inclination, are two antennulæ, or palpi, shorter than the mandibles by which and the lip they are partially concealed and protected. It could not be determined whether it possessed the large under lip so remarkable in the *Acarus scabici*, nor could the two flat eyes which are found in the neck of the insects of this genus, be discovered. These latter as well as the pulmonary and other delicate organs, were supposed to have been rendered invisible in consequence of the contraction of the insect by the alcohol. From a long narrow sternum, proceed eight supporting members, articulated and movable, four in front and four behind, the former shorter and much stronger than the latter. Each limb is composed of seven joints not including the tarsus, similar to many insects of the genus *Arachnida* and *Crustacea*. The first, which may be called the haunch, is of a triangular shape; the second and third rather longer; the fourth longer than the two preceding ones; the fifth shorter than the fourth; the sixth and seventh much longer and thinner than the others; the last of which ends in a very small transparent tarsus of a bilobate form, and terminating in a single nail or claw inclined inwards. From the upper part of each joint except the haunch, proceeded one or more long, straight hairs. The insect of Mr. Crosse apparently constitutes a new species of the genus *Acarus*. Those which most resemble it in form and description are the *Acarus sero*, and perhaps even more so the *Acarus dimidiatus* of Herman. Allowing that it is a new species and its novel origin be established, from its extreme ugliness it may appropriately be called *Acarus horridus*. The conclusion of the paper comprised, as before stated, 'Observations on the singular origin, or, rather, singular creation, of the insect;' but a glance at our notes, and the already lengthiness of this notice, warns us to forbear entering minutely into the views contained therein; suffice it to say, that they tended to prove, by a knowledge of, and attention to, physiology and organisation, that Mr. Crosse could not have created or produced the *Acarus horridus*, by means of those agents which he

has indicated, and that if Mr. Crosse fancies that he has been able to form an insect "solely from the simple elements of matter which may be developed from a piece of pumice stone moistened by silicate of potash, saturated with muriatic acid, and kept constantly electrified (and we are credibly informed, that the new creator continues to gain confidence in the idea), he does not appear to have sufficiently studied the organisation of living beings. With regard to Mr. Crosse, it is but fair to state that in his letter, copied from a provincial journal into the *Lit. Gas.* No. 1087, he disclaims all "merit in the affair," and states that he has avoided noticing the remarks which have been made upon these formations, from the wish of himself being better informed of the nature of the apparent mystery. After this report, however, Mr. Crosse cannot be much longer silent under the repeated charge of blasphemous arrogance. Other papers were read, and the meeting adjourned.

## LINNEAN SOCIETY.

MR. FOSTER in the chair.—Mr. Cartwright presented to the Society's museum a stuffed specimen of the rare *Cygnus nigricollis*, the black-necked swan from the Straits of Magellan. Mr. Ward exhibited a series of specimens of the *Laminaria digitata*, which he had received from Mrs. Griffiths of Torquay, shewing the curious mode by which the species of that genus of marine plants renovate their fronds, which are developed at the base of the old ones, and between them and the stem; the older ones being gradually carried upwards, and finally thrown off. This process of renewal takes place, according to Mrs. Griffiths, annually. The species exhibited various stages of development of the new frond. Read, a notice of *Succinea amphibia*, and its varieties, by Mr. Daniel Cooper; and observations on the varieties of growth of plants of the genus *Chara*, by Mr. Queckett.

## LITERARY AND LEARNED.

## UNIVERSITY INTELLIGENCE.

OXFORD, Dec. 13.—The following degrees were conferred:—

*Masters of Arts*.—Rev. T. Baker; Rev. R. S. Dobson; Rev. F. C. Allfree, St. John's College; W. L. Barnes, St. Peter's College; Rev. J. G. Cumming, Emmanuel College.

*Bachelors in Civil Law*.—E. Z. Palmer, Trinity College; T. Golding, Trinity Hall.

CAMBRIDGE, Dec. 12.—The following degree was conferred:—

*Master of Arts*.—Rev. A. Langton, Wadham College.

## ROYAL SOCIETY.

MR. BAILY in the chair.—A paper was in part read, entitled, "Experimental Researches in Electricity, No. II." by Mr. Faraday. To this communication we shall of course return; in the meantime it may be observed, that the distinguished author, in opposition to Poisson, Cavendish, and others, is decidedly of opinion that induction is the action of contiguous particles. The meetings were adjourned over the Christmas recess.

## ROYAL ASIATIC SOCIETY.

DEC. 16th. Professor Wilson, director of the Society, in the chair.—Donations to the library and museum were presented, and members elected. Mr. Wilkinson continued the reading of a paper on gunpowder, which was commenced at the preceding meeting. The present division of the subject was the manufacture, as carried on at the best gunpowder-mills of this country. Several observations were made at the conclusion of the paper by Col. Galloway, who had the charge of the government manufacture in India, pointing out the differences between the

Indian and English methods, which the difference of climate, and some other circumstances, had rendered advisable; these observations we shall place in juxtaposition with the description of the process as furnished by Mr. Wilkinson. After some curious details relative to the mode of procuring saltpetre, in different parts of Europe, and an account of the best mode of making charcoal, Mr. W. stated, that the ingredients are simply placed in a shallow trough and mixed by hand; and that, although this method might seem imperfect, it was amply compensated by the subsequent process at the powder-mill. The mixing in India was stated by Col. Galloway to be performed by placing the ingredients in barrels, furnished with ledges projecting inwards, and interspersed with a number of bronze bullets; the barrels were rolled round by machinery, and the material well broken—he considered this method an improvement. When mixed, the composition is taken to the mill, placed in a circular trough, and well ground by a couple of stone rollers, from three to four tons each in weight. This is continued about three hours, more or less, according to the state of the atmosphere. In India the grinding was affected by cylinders of bronze, each weighing six tons; these were six feet in diameter, and eighteen inches in breadth; and Col. Galloway conceived that the incorporation of the ingredients was more readily effected by the increased weight. This process reduces the material to a mass, which is afterwards pressed strongly, by means of a screw and levers, to a cake resembling slate. The cake is then broken up into small bits, by means of wooden mallets, and corned or grained. This operation is effected by shaking it about in sieves made of strong bullock's hide, and perforated. Large pieces of lignum vitæ are put into the sieves with the cake to aid in breaking it up. The grains are then separated and classified, by passing through sieves of different degrees of fineness; they are subsequently glazed by rolling in barrels, which are whirled around with considerable velocity several hours. In India the granulation is performed more mechanically, by an engine composed of a system of rollers furnished with teeth. After passing through three sets of rollers, the powder is granulated; it is afterwards glazed as in England. The process is completed by drying the powder, which, in England, is effected by artificial heat, raised to 140° Fahrenheit, and, in India, by the heat of the sun alone. Colonel Galloway was of opinion that powder dried in this way was better than that dried by stoves; and, in fact, that Indian powder, for the purposes of war, was really better than English powder. Mr. W. then produced some instruments which were used in proving the goodness of gunpowder; and observed that no single method of trying it was good; that one sort of *épreuve* shewed the superiority of the powder for one particular quality, and another for another; but that actual trial in the way it is to be used is the only criterion; in this Col. Galloway concurred: he was of opinion that no way was so good as actual work in the face of an enemy.

## SOCIETY OF ANTIQUARIES.

MR. HALLAM in the chair.—Mr. Pettigrew exhibited a work on midwifery, in MS., written about the year 1540, and dedicated to Catharine, Queen of Henry VIII. It was originally written in German by Roslin, or, as he sometimes called himself, Rodion; translated into Latin, and from thence into English, by Dr.

Thomas Raynalde; and was a standard work for nearly a century. Mr. Pettigrew produced no less than seven printed editions from his own library. Mr. Hawkins communicated an account of some Saxon pennies, found at Swindon, North Wilts, in 1834.

LITERARY AND SCIENTIFIC MEETINGS  
FOR THE ENSUING WEEK.

Tuesday.—Zoological, 84.

Thursday.—Royal Society of Literature, 4.

## FINE ARTS.

## NATIONAL MONUMENTS.

ON Saturday there was a meeting of the committee appointed to procure free admission to national buildings, museums, monuments, &c., Mr. Ewart in the chair, at which the honorary secretary read a report of what had been done since the last meeting, accompanied by some very interesting correspondence. From the latter it appeared that the Dean and Chapter of Saint Paul's, and the heads of the dioceses of Norwich, Bath and Wells, and Chichester, had granted such facilities for public admission to the Cathedrals under their charge, as they deemed consistent with their safe custody, and the uninterrupted performance of the sacred services to which they are appropriated. On the contrary, the Dean and Chapter of Westminster had refused to make any change in their system; the President of the Royal Academy had stated their reasons for declining to afford any days of gratuitous entrance to the Exhibition; and the Constable of the Tower went in detail into the grounds upon which it was thought expedient to resist a "promiscuous" and unrestricted influx of persons into a place where so large a portion of the arms of the country was kept. Mr. Hume, whose exertions in this matter have been most indefatigable, took a review of the past proceedings, and recommended perseverance in a moderate course to remove the difficulties which remained, and obtain the object sought. Where no real or just objections, existed, he was of opinion that the strength of government, backed by the sense of the people, ought to be applied, and must succeed; and where there were any rational obstacles, that means should be devised to remove them satisfactorily. After some discussion, this seemed to be the general sense of the meeting, and resolutions, consistent therewith, were passed. Thanks were voted to those parties who had conceded to the national wish; and to Lord John Russell, who had so zealously entered into measures to accomplish it. The papers are to be laid before Parliament, and till then, we shall content ourselves with but one observation: this is not a business of faction, but equally supported by Tory, Whig, and Radical; and since all agree in the expediency of educating and informing the lower orders of the people (though there are so many theories about the proper methods), surely, all must agree in the expediency of affording them this unexceptionable mode of acquiring intelligence and taste; and where no irremovable cause operates to their exclusion, not only freely admitting, but courting them to frequent places favourable to their moral civilisation and refinement. It is quite as much within the scope of such resorts to make good citizens, and good men, as to create genius, or excite talent.

## INSTITUTE OF BRITISH ARCHITECTS.

AT the ordinary meeting on Monday evening, P. F. Robinson, Esq. V.P. took the chair.—Sir Robert Peel was elected an honorary fellow,

unanimously. Several eminent foreign architects, as honorary and corresponding members, were also elected. Some interesting letters from Dr. Müller, Darmstadt; M. Vandoyer, Paris, and Signor Bolsato, of Venice, were read; and the secretary announced, among many valuable presents, a copy of the original drawing for Cologne Cathedral, which was discovered by Dr. Möller amongst the archives at Darmstadt. The second part of a paper upon the history of the English school of Gothic architecture, by J. Blore, Associate, was read, describing the latest period of the pointed style, known by "perpendicular," which prevailed from the reign of Richard the Second to the latter part of that of the seventh Henry. Before applying the principal features of this style to domestic, the writer remarked on the ecclesiastical architecture of this period, and enumerated the cathedrals and churches, the richest and finest examples of this character—Beauchamp Chapel, at Warwick, St. George's, Windsor, the east windows of the choirs of Gloucester and York Cathedrals, those of Henry the Seventh's Chapel, Westminster Hall, King's College Chapel, Cambridge, St. Stephen's Cloisters, Westminster, &c. Attention was drawn more particularly to the arches, the jambs and mullions of the windows, the arched heads of doorways, the buttresses, piers, and pinnacles of this period, with their florid tracery and decorations. With reference to the applicability of this later style to domestic buildings, the pointed windows were rarely adopted, except in the lofty refectory, such as Crosby Hall, Eltham, and Hampton Court. The windows belonging to the domestic architecture, are the square-headed, and the oriel or bay, divided by mullions and transoms into various openings or panels. The oriel windows of this time were especially distinctive features of domestic buildings, and produced, by the variation of the plan, a very interesting and pleasing effect. Opportunities were afforded for display in ornamental glazing; and, from the angular position of the compartments, the effect was more imposing. These windows are mentioned in several old romances.

"In her oryall there she was,  
Closyd well with royall glas."  
*Squire of Low Degree, and others.*

Crosby Hall, Eltham, and Hampton Court, before mentioned, with those of Croydon Palace, Christ Church, Oxford, and the Deanery at Wells, afford specimens of the larger windows of this kind, commencing from the floor, peculiar to ancient refectories; and of the smaller examples, corbelled out from the walls by bold mouldings, the collegiate buildings of Oxford and Cambridge afford numerous instances; also Thornbury Castle, Gloucestershire, the Chancellor's House, Lincoln, &c. Porches, doorways, doors, gables, towers, turrets, parapets, chimneys, &c. &c. in their proper place and order, were severally described, and contrasted with those of former periods; also the ornamental carpentry of the interior, staircases, ceilings, &c. Internal colouring was carried to considerable extent by our forefathers in their domestic buildings, and added much to the beauty and effect of the architecture. The hollows, beads, and mouldings, were striped in various tints. The fillets and foliage of bosses were often gilt. Mr. Blore, in his epitome of our ancient architecture, afforded a very interesting and just idea of the works of the "olden time." A letter was then read from Mr. Cole, describing a painted screen in the parish church of Dartmouth, in consequence of the attention of the Institute having been

directed to the polychromy of Gothic architecture. The screen is twelve feet nine inches high, and forty-six feet long, extending across the nave and aisles, and separating the church from the chancel. The caps of the pillars, cusps, crochets, and beads, are gilt; the bosses carved and gilt, on a crimson or purple ground; the spandrels also are painted either crimson or purple; the hollows of the ribs in the groining have running foliage in green and gold. The whole screen is in good preservation. In the church are also seven galleries, which, with the ceiling, are similarly ornamented; the latter formed in panels by oak ribs, with gilt knots in the intersections, the panels being painted blue, with gilt stars. The pulpit (of granite) is encircled with tracery, niches, animals, and foliage, painted and gilt in a style corresponding with the screen.—Read, also, observations, by T. L. Donaldson, Hon. Sec. on architectural notation. The necessity of an uniform, universal system was proved by reference to those adopted by English writers on architecture. Of twelve on Greek architecture, five have distinct methods of notation; of those on Roman architecture, two only have given the dimensions in feet and inches, and both have used different modes; and of the several on Gothic architecture, the systems adopted are as numerous as the writers. Mr. Donaldson proposes that the feet and inches be separated by two strokes, as in our monetary system, and that the parts of an inch should be expressed decimally by a dot; that the symbols should be those used by astronomers—the small circle for the feet, as the primary quantity, the simple stroke, or acute accent, for the inches, and the double stroke for the tenths, thus: 1°, 2', 5". No confusion could arise from the employment of the astronomical symbols, as temples, and even cities, are never measured by degrees of miles; and Mr. Donaldson recommends that the scale should always be placed at the bottom of a plate, and the different divisions carefully marked thereon. Other interesting papers were read.—Adjourned.

#### DRAMA.

*Olympic*.—Since our last notice, *The Ladder of Love* has been produced at this theatre, and owes its success rather to the lively and agreeable acting than to its intrinsic merits, though the last scene is extremely humorous. Keeley and Madame Vestris, aided by C. Mathews, T. Bland, and Miss Murray, manage to keep up the interest of the piece until the denouement. In *The Bengal Tiger*, another novelty, we have a perfect picture of peevish and suspicious, yet credulous, nabobship, in the *Sir Paul Pagoda* of Farren, and as perfect a sketch of an old maiden fortune-huntress (*Miss Yellowleaf*—a most expressive name) by Mrs. Orger. Keeley, also, is rich as a blunt and faithful old servant: we never saw a character better performed on a first night, nor contribute more to the success of a piece. The dialogue has some very smart and ludicrous hits; and the more serious portions are often very touching. *The Ringdoves*, as the actors warm into their several characters, continues to prosper; in truth, it is one of the most laughable pieces on the stage—very dramatic, full of incident, fun, and bustle, and, without exception, admirably acted. No wonder the audience greets it with peals of laughter. Mr. C. Mathews is inimitable in his imitations of Mr. F. Matthews.

#### VARIETIES.

*Panorama*.—The Bay of Islands, New Zea-

land, is the subject of Mr. Burford's new panorama, and a very beautiful picture it is. The country and the islands are eminently Greek in appearance; and, but for the native groups, we could hardly have persuaded ourselves that we were not looking at the Grecian Archipelago. The forms, altogether, are extremely picturesque, and the water and melting away in the distance, delightfully executed. Our young holiday friends will be much gratified with the sight.

*Horticultural Exhibition*.—On the 9th inst. there was another monthly exhibition of the winter-products of fruit, flowers, and vegetables of the Central Society, at which some very beautiful plants, and some (for the season) very fine and curious esculents, &c. were exhibited. In the afternoon the rooms were lighted, and, with the attractions of the band, made the lounge as agreeable as it was interesting.

*Chatterton*.—A proposal is afloat to erect a monument to the memory of Chatterton, at Bristol. The subscription, we believe, promises well; but we shall return to the matter in our next; wishing it, in the mean while, every success.

*Endless Fun*.—(London, Spooner.) A small but capital Christmas-box, furnished with a set of cards well contrived to amuse a family circle for hours together. The cards are droll pictures, and by an endless series of cross-readings, much drollery is created: we take one of these readings on five cards, hap-hazard, "My Grandmother's Cat—goes to bed—without a shirt—in black satin tights—by way of a change." Others, we see, are yet more human and humorous, and the combinations are legion, for innocent mirth and laughter.

*Coat or Jacket*.—A Clergyman, who took a very zealous part in the last Devonshire election, provoked one of the candidates mightily, by an address on the hustings, in which he characterised him and his family rather roughly. In reply he observed, that he himself despised the allegations of his adversary, but that the language he had used, in speaking of his father, was such, that he was sure nothing but his coat would protect him from his resentment. "Make my compliments, to your father (retorted the pugnacious churchman), and tell him I have a Shooting Jacket."

*Sans Ceremonie*.—In a skirmish of wit, at table, a few days since, some one said to H—, "you are as likely as any body to turn Jew." "Rabbi-t me if I do," was the rejoinder.

*The Queen*.—Only a few days ago we saw a fine etching of the Queen, preparing by Mr. Moon, and which we since observe (from the court news) has been shewn at court, and highly approved; the enterprising publisher being appointed and sworn in printseller in ordinary to her majesty. Yesterday, we had the pleasure of seeing a drawing of her majesty by Parris, and a more charming performance of the kind we never witnessed. It is a full face, and replete with the sweetness and intelligence which convey the finest expression of the royal countenance. The dress is also admirably arranged, and effective. This portrait has been highly approved by the Duchess of Kent, &c., and is engraving by Wagstaffe, for Hodgson and Graves.

*Caricatures*.—Recent skimmages in parliament were too striking not to furnish matter for H. B.'s pencil. Two more novelties have just appeared: the first, Lords Brougham and Melbourne, as Peachum and Lockit, from the "Beggars' Opera;" the former pummelling the latter for telling him, "No man can glaze, and fawn, and flatter, and bend the knee, as

you do." And the next (No. 510), the same noble law-lord tickling the nose of the secretary for the colonies with a feather, marked "W. India affairs." Both are of very amusing character, and we are pretty sure that a look at the last would wake Lord Glenelg as effectually with laughter as any other tickling that could be administered.

*Weather Wisdom*.—The past week is admirably true, and this makes us the more apprehensive of what is predicted to follow. "A very rude kind of weather at Christmas; cloudy and wind. The new moon brings stormy, cold, intemperate weather, and snow, perhaps, also, frost. This year ends cold and wintry, with sleet or heavy rain and fog."

*The Royal Academy of Music*.—We regret to say, that the receipt of our notice from the Academy was too late to allow us to attend the last concert on the 9th, especially as the selection was a very tempting one, and the finest productions of Beethoven, Handel, and Spohr, were upon the list.

#### LITERARY NOVELTIES.

Among forthcoming novelties, is a new edition of Mansie Waugh, with illustrations by Cruikshank.

#### LIST OF NEW BOOKS.

The Rural Life of England, by W. Howitt, illustrated with Wood Engravings by S. Williams, 2 vols. post 8vo. 24s.—Specimens of the Poets of Great Britain, by J. Johnstone, 34mo. 3s. 6d.—The Patent Law Amendment Act, by C. L. Drewry, 8vo. 5s.—Lingard's History of England, Vol. V. fcap 5s.—New Scenes for Youth, by Mrs. Rodwell, square, 2s. 6d.—Novel Adventures of Tom Thumb, by Mrs. Barwell, square, 2s. 6d.—Minstrel Musings, by E. Carpenter, 18mo. 2s. 6d.—Minute, by J. W. Penn, new edition, 12mo. 5s. cloth.—J. W. Smith's Typical Parts of our Lord's Teaching, 12mo. 3s.—Memoir of Erasmus H. Limon, 18mo. 2s. 6d.—R. Maughan's Outlines of Criminal Law, 18mo. 10s.—Paul Preston's Voyages, Travels, and Adventures, 4s. 6d.—Short Hints on Short Hail, 18mo. 1s.—Benefit of Scriptural Instruction, by M. M. Preston, 12mo. 1s. 6d.—Historical Memoirs of the Queens of England, by H. Lawrence, 8vo. 12s.—History of Ancient Philosophy, by H. Ritter, 2 vols. 8vo. 1l. 10s.—An Analysis of Butler's Analogy of Religion, by the Rev. J. P. Wilson, M.A. 2s. 6d.—The Voyages, Adventures, and Escapes of Capt. R. Falconer, 18mo. 3s. 6d.—The Force of Imagination and other Poems, by A. Tennant, 12mo. 5s. 6d.—Lush on Wills, 2d edition, 12mo. 2s. 6d.—Parley's Tales about Christmas, square, 7s. 6d.—Grammar of the New Test. Dialect, by M. Stuart, 12mo. 7s. 6d. cloth.—Sheffield's Treatise on the Law of Wills, 18mo. 10s. 6d.—Archbold's Practice, by Chitty, 2 vols. post 8vo. 2l. 2s.—Forms of Practical Proceedings, by T. Chitty, post 8vo. 1l. 1s.—Supplement to Halemb on Private Bills, 7s.—Lives of Eminent Youth, by B. H. Draper, 32mo. 2s.—The Sick Man's Guide, by the Rev. W. H. Hale, 8vo. 3s.—Private Correspondence of Sarah, Duchess of Marlborough, 2 vols. 8vo. 1l. 8s.—Rowland Maughan, by Miss Strickland, 18mo. 2s. 6d.—Short Stories in Short Words, by Mrs. Burden, 18mo. 1s. 6d.—Familiar Exercises between an Attorney and his Clerk, by F. Hubler, jun., 12mo. 7s.—Gospel Harmony, a Sacred Poem, by Dr. T. Parfit, post 8vo. 6s.—Rev. W. Whewell's Astronomy and General Physics, fcap. new edit. 6s.—Ware's Scenes and Characters, illustrating Christian Truth, 3d edit., 2 vols. 18mo. 7s. cloth.—The Parent's Guide to a Liberal and Comprehensive Education, by Rev. Robert Simson, M.A., 12mo. 2s.—Memoirs of Joseph Holt, General of the Irish Rebels in 1798, by T. C. Croker, 2 vols. 8vo. 1l. 8s.

**COMIC QUADRILLE CONVERSATION CARDS,** written and illustrated by ALFRED CROWQUILL, Esq.

"We have received a Pack of Cards, in which conversation, during dancing, is to be kept up by playing at a game with them. We strongly recommend these Conversational Cards in the dancing-rooms of our English friends, where the profound stupidity of a dance is generally the most ridiculous thing in the world."—*Metropolitan Conservative Journal*.

"A pack of Cards, pictured on one side and poetized on the other. We recommend all our dancing friends to procure this whimsical illustration of quadrilling. The ladies and gentlemen are cleverly and ludicrously drawn; and the verses have many laughable points and puns."—*Literary Gazette*.

"A pack of Cards. The figures are sketched with great spirit; and the cards will contribute to the hilarity and entertainment of a quadrille party."—*Naval and Military Gazette*.

London: Ackermann and Co. 26 Strand.

## SALES BY AUCTION.

**The Galleries of Ancient and Modern Pictures of the Right Hon.**

Lord Northwick.

MESSRS. CHRISTIE AND MANSON

Respectfully inform the Nobility, Connoisseurs, and Public, that they have been honoured with Instructions to sell by Auction,

AT THEIR GREAT ROOM, KING STREET,  
ST. JAMES'S SQUARE,  
IN MAY,

**The Magnificent Assemblage of Pictures of the Right Hon.**

Lord Northwick.

Being the Entire London Collection of his Lordship, who is leaving his Mansion in Connaught Place.

This extensive and almost matchless Collection, which has been formed, during a Series of Years, under peculiar advantages on the Continent and in this Country, with that taste and discrimination, which has been long acknowledged, will offer to the Connoisseur, from the excellency and number of the works in all the great schools, a gratification such as has not been afforded, under similar circumstances, since the dispersion of the Orleans Gallery. The riches which will be found among the Works of the great Masters in the Roman, Florentine, Venetian, Bolognese, and Lombard Schools, are those of

Raffaello	L. da Vinci	Guido
G. Romano	A. del Sarto	The Carracci
F. da Modena	Correggio	Guercino
G. Bellini	Farnesino	Domenichino
Giorgione	Schedoni	S. Rosa
Titian	F. Bartolomeo	Claude

Of the Spanish School, three incomparable Pictures by Velasquez; of the Flemish and Dutch Schools, Rubens, Wouvermans, and many Paintings of the most distinguished Masters of these highly admired Schools. Fine Specimens by Poussin, &c. Also, in the English School, many Works of the highest Class, by living Artists.

Further Notice will be given.

## BOOKS IN THE PRESS.

In a few days, fcap 8vo.

**PEDRO OF CASTILE;**

a Poem.

By HENRY JOHN SHEPHERD, Esq.

John Murray, Albemarle Street.

December 1837.

NEW BOOKS ON THE EVE OF PUBLICATION

BY MR. MURRAY.

**THE LIFE, JOURNAL, and CORRESPONDENCE OF WILLIAM WILBERFORCE.**

By his SONS.

4 vols. post 8vo.

The Life and Correspondence of

Admiral Earl Howe.

By Sir John Barrow, Bart.

With a Portrait, &amp;c. 8vo.

**The Manners and Customs of the Ancient Egyptians.**

By J. G. Wilkinson.

Illustrated by 450 Woodcuts, and numerous other Plates.

3 vols. 8vo.

**Inquiries Concerning the Intellectual Powers, and the Investigation of Truth.**

By John Abercrombie, M.D. Oxon. and Edin.

8th edition, post 8vo.

**Travels in the Punjab, Ladakh, Kashmir, &c.**

By Messrs. Moorcroft and Trebeck.

2 vols. 8vo. with Map and Plates.

**Travels in Arabia (Oman), in the Peninsula of Mount Sinai,**

And along the Shores of the Red Sea.

By Lieut. Weiland, F.R.S.

With Map and other Illustrations. 2 vols. 8vo.

John Murray, Albemarle Street.

Under the Superintendence of the Society for the Diffusion of Useful Knowledge.

On the 1st of January will be published,

**THE PENNY MAGAZINE, Part LXIX.**

The Price 6d.

The Sixth Volume will also be issued at the same time, price 7s. 6d., uniformly bound with the preceding volumes; any of which can be obtained of the Booksellers.

**The Penny Cyclopædia, Part LX. price 1s. 6d.**

The Tenth Volume will be completed early in January, price 7s. 6d., bound in cloth, and may be obtained with any of the preceding volumes, uniformly bound, through every Bookseller.

"The Penny Cyclopædia," Vol. I. Part I. price 2s. A re-issue of "The Penny Cyclopædia" in half-volumes has been undertaken, as, by this arrangement, new Subscribers, by a moderate periodical outlay, will be enabled to complete the Work simultaneously with the purchasers of the current edition.

**The Library of Entertaining Knowledge,** Vol. XXXVII., being the Second Volume of "The Chinese;" a General Description of the Empire of China and its Inhabitants. By John Francis Davis, Esq., late His Majesty's Chief Superintendent in China.

The First Volume of "The Chinese" was published on Dec. 1. Price of each volume, bound in cloth, 4s. 6d. They are also issued in Half-volume Parts, sewed, 2s. each. All the preceding volumes of the series may be had, uniformly bound, price 4s. 6d. each.

London: Charles Knight and Co. 25 Ludgate Street.

On the 1st of January will be published,

**THE PICTORIAL BIBLE, Part XXIII.**

price 2s. The Work is also published in Weekly Numbers, price 6d. each. The Second Volume was completed in Part XVII.

The First Volume includes to the end of Ruth, and contains 238 Woodcuts, handsomely bound in cloth, price 17s. 6d.

The Second Volume extends from Samuel to the end of Isaiah, and contains 260 pages of Letter-press, with 281 Woodcuts. Price 1l.

The Third Volume will complete the Work.

**The Quarto Pictorial Bible, Part I. price 5s.**

to be completed in Sixteen Monthly Parts, forming Four Handsome Volumes.

The Proprietors of the "Pictorial Bible," have been induced to undertake a Quarto Edition (to correspond with Mant and D'Oyley's, Scott's, and other Bibles) at the urgent request of many Correspondents, who are anxious that the Notes, whose value has been universally recognised as forming in themselves a Library for the Religious Student, should be printed in a larger type. The next will, of course, be proportionately larger. The alterations in this Edition will be limited to a few Corrections, the Engravings will be the same, and the Impressions, in every respect, as excellent as those of the Original Edition.

**The Pictorial Edition of the Book of Common Prayer,** with Original Notes, by the Rev. Henry Stebbing, M.A. Part IV. price 2s. 6d. containing 77 Woodcut Illustrations.

**The Pictorial Edition of the New Testament,** Part II. price 2s. To be completed in One Volume, containing about 300 Woodcuts.

**The Pictorial History of England, Part XI.** Price 2s. The Work is also published in Weekly Numbers, price 6d. each.

The present Part completes the First Volume, which will also be published, handsomely bound in cloth, price 1l. 4s. It comes down to the end of the Reign of Richard II. and contains nearly 600 Woodcut Illustrations.

London: Charles Knight and Co. 25 Ludgate Street.

On January 1 will be published, in fols cap 8vo. with Illustrations, price 6s. cloth.

**ANIMALS in MENAGERIES.**

By W. SWAINSON, Esq. F.R.S. L.S. &c.

Forming Vol. 98 of "Dr. Lardner's Cabinet Cyclopædia," and Vol. 7 of "The Cabinet of Natural History."

Lately published, by the same Author,

**Natural History and Classification of Birds.**

2 vols. 12s.

**Natural History and Classification of Quadrupeds.** 1 vol. 6s.**Geography and Classification of Animals.** 1 vol. 6s.**Preliminary Discourse on Natural History.** 1 vol. 6s.

Also,

**Henslow's Botany.** 1 vol. 6s.

London: Longman and Co.; and John Taylor.

On the 1st of January will be published in fcap 8vo., price 6s.

**THE REV. W. WHEWELL'S BRIDGE-WATER TREATISE on Astronomy and General Physics.**

William Pickering, Publisher, Chancery Lane.

On Monday next, price 2s. 6d., a new edition of

**SKETCHES OF YOUNG GENTLEMEN.**

By "QUIZ," Jun.

The Illustrations by Cruikshank,

**2. Kidd's Science of Etiquette, 12th edit.**

1s. 6d.

**3. Kidd's Little World of Great and Good Things, &c.**

W. Kidd, 7 Tavistock Street, Covent Garden.

## BOOKS PUBLISHED THIS DAY.

In 12mo., price 4s., a new edition of the Rev. Thomas Maude's poem.

## THE SCHOOLBOY.

"In a poem abounding with so many rich passages as this work contains, we are almost at a loss to transfer portions of it to our pages; for, when we have gathered a few flowers, so many are left behind, that they even appear lovelier, though remaining unplucked, than those which we have culled. We cannot do better than recommend our readers to take a survey of this delightful garden, and all gather to please their fancies."—*Edinburgh Review*.

"The 'Schoolboy' contains some of the graphic touches of a Crabbe, the green stillness of a Clare, the religion of a Thomson, the perfect picturing of a Goldsmith, and the minute grouping of a Bloomfield."—*Literary Gazette*, October 1, 1838.

London: Longman and Co.; and to be had, by Order, of every Bookseller in Town and Country.

Published by Wright, late Porter and Wright, Bookseller to the Queen, 93 Pall Mall.

TUITION, 2 vols., printed on glazed drawing-paper, quite new, 8s. 6d. cloth boards.—2. The same Work, on fine royal paper, 8s. cloth boards.—3. Prof. Klauser's splendid edition of Baron J. M. de Fouqué's exquisite Tale, "Undine," printed on pink-coloured glazed drawing-paper, handsomely bound in calf, gilt edges, extremely rare and quite new, price 6s. At the same Library may be had, M. Klauser's correct and elegant edition of the German Manual, 2 vols. 8s.—Undine, 5s.—Die Deutschen Kleinmärchen, 4s.—Der 2te Februar, 3s.—Exercises for Writing German, 5s.—Key to Exercises, 3s.—Poetical Anthology of the Germans, 3 vols., viz. Popular Songs, 5s.; Lyrical Poems, 8s.; Ballads and Romances, 8s. Of the latter work, "The Dublin University Magazine" of the present month (p. 635) observes, "This is a publication which every lover of German literature should be anxious to possess. In the variety, brilliancy, and general excellence of its contents, it far surpasses even any of M. Klauser's previous works of a similar class; and higher praise it would be impossible to award it."

## MR. BENTLEY'S NEW PUBLICATIONS.

**THE LIFE AND TIMES OF LOUIS THE  
FOURTEENTH.**

By G. P. R. JAMES, Esq., Author of "Darnley," "Life of the Black Prince," "Philip Augustus," &c.  
Two vols. 8vo. embellished with Portraits of Louis XIV., Anne of Austria, Duchesse de la Vallière, Cardinal Mazarin, the Prince de Condé, and Marshal Turenne.

**THE ELOPEMENT; A NOVEL.**

By the Author of "Robert d'Artois." 3 vols. (*In a few days.*)

**NARRATIVE OF THE RESIDENCE OF THE  
PERSIAN PRINCES IN LONDON, IN 1835 AND 1836.**

WITH AN ACCOUNT OF THEIR JOURNEY FROM PERSIA, AND SUBSEQUENT ADVENTURES.

By JAMES BAILLIE FRASER, Esq.

Author of "Tour in the Himalaya Mountains," "The Kuzzilbash," &c. 2 vols. post 8vo. with Portraits, &c. (*In a few days.*)

**THE HISTORY OF FERDINAND AND ISABELLA.**

By W. H. PRESCOTT, Esq.

Three vols. 8vo. with Portraits of Columbus (from the original Painting by Parmegiano, at Naples), Cardinal Ximenes, Gonsalvez de Cordoba, and Ignatius Loyola.

**EXCURSIONS IN THE ABRUZZI,  
AND NORTHERN PROVINCES OF NAPLES.**

By THE HON. KEPPEL CRAVEN. Two vols. 8vo. embellished with numerous Engravings, price 24s.

THE FOLLOWING ARE JUST READY:—

**MEMOIRS OF SIR WILLIAM KNIGHTON, BART. G.C.H.**

KEEPER OF THE PRIVY PURSE DURING THE LATTER PART OF THE REIGN OF HIS MAJESTY GEORGE THE FOURTH.

By LADY KNIGHTON.

Including numerous Letters from the most Distinguished Personages. Now first published from the original MSS.  
In 2 vols. 8vo. with a Portrait, engraved by Greatbach.

**VIENNA AND THE AUSTRIANS.**

By Mrs. TROLLOPE,

Author of "Domestic Manners of the Americans," "Paris and the Parisians," "Belgium and Western Germany," &c.  
Two vols. 8vo. with 14 Illustrations by Hervieu.

**CHEAP AND ILLUSTRATED EDITION OF  
CAPTAIN MARRYAT'S STANDARD NOVELS.**

To be completed in Six Monthly Volumes, price Six Shillings each, every Volume to contain an entire Work, neatly bound, and embellished with Two Engravings by Greatbach, from original Paintings by Cawse. The First Volume, to be published on Jan. 1, will contain

**PETER SIMPLE, COMPLETE, PRICE SIX SHILLINGS.**

### ADDRESS.

THE contracts between the Press and the Public are of a curious character.

They commence in the former assuming a high and important trust—the right of pronouncing judgment upon men and things; and they are fulfilled or violated in many ways, after obtaining their original credit on professed principles, and being wrought out fairly or unfairly, with or without talent.

Some Periodicals flourish for a season by pandering to the bad feelings of mankind; but, destitute of vital strength, their permanency is fortunately limited, and they soon decay, and perish.

Others, by a shallow show, and market at low prices, like the half-stolen, half-imitation articles in the windows of cheap shops, “selling off at prime cost,” with, perhaps, a genuine piece here and there to bait the trap, also contrive to exist for a while, and live on the profits of the deception till the cheat is discovered, and down drops the fabric.

A third class pushes its temporary business on the blacking or quack-medicine system; viz. if a thousand pounds expended in puff, and all the artifices of industrious chandler agency, levy ten or twenty per cent on credulity, obtaining vent for what otherwise would not sell at all, it is to be wise in your generation to puff and impose.

We take the liberty, now, to enumerate these diversities, in order to state the desire of the *Literary Gazette* to stand free from such companionship; and, after an experience of TWENTY-ONE YEARS, to appeal to its readers for their verdict, whether it has or has not firmly adhered to its first data, faithfully observed its obligations, and justly merited the confidence it sought and obtained?

Its announced object was the encouragement of the literature, the arts, and the sciences of Great Britain: look at the difference of their popular bearing between 1816 and 1837!!!

The means were simple:

To be honest and impartial;

To cherish every effort of promise, however imperfect or humble;

To praise desert of every kind with cordial warmth;

To censure without severity, where neither bad motive could be assigned, nor public injury be feared;

To crush, if possible, by indignant reprehension and exposure, every impudent and vicious production, no matter whence it came, or by whom it was countenanced;

Adding to these the qualities of patient labour and prompt exertion, so as to comprehend as much of the national mind and genius, and exhibit an adequate view of their fruits in every novelty as immediately as could be done, the *Literary Gazette* fearlessly abides the sentence, whether or not it has done its duty?

On the same grounds, and continuing to enjoy, as it has ever enjoyed, the aid of the foremost talent which has adorned or may adorn its period, it looks forward with high hopes to another twenty-one years of happy intercourse with those friends who receive it as a weekly compendium of all that can interest an intelligent community, and place its readers in a position to understand and share in the best and most lasting topics of the day.

### REVIEW OF NEW BOOKS.

*The Life of Richard Earl Howe, K.G., Admiral of the Fleet, and General of Marines.*  
By Sir John Barrow, Bart. F.R.S. 8vo. pp. 432. London, 1838. Murray.

THIS is exactly such a volume as we could have anticipated from the subject and the author; an interesting and delightful addition

to British biography. Earl Howe began the great glories which illuminated the last war, and finally left the ocean without a navy, except that which bore the flag of England. From his access to the best information, from his acknowledged abilities, and from his experienced judgment in all matters connected with our naval affairs, Sir John Barrow was precisely the individual living to do justice to his history. Incited to this task by our late lamented sovereign, he has, indeed, worthily acquitted himself of it; and whether we look to a work of the kind for useful instruction, or rational entertainment, both will be found amply combined in these pages. Unfortunately, a fire which took place at Westport, the seat of the Marchioness of Sligo (Earl Howe's youngest daughter), appears to have destroyed not only her father's papers, but those of her aunt, and has deprived the writer of what would probably have been precious materials; but he has, nevertheless, so excellently availed himself of such as have been at his disposal, that his readers cannot be sensible of any loss; and, with this brief description, we shall proceed to notice some of the leading and amusing features as they have occurred to us. We may notice that the Howe family were held in particular esteem by George III., George IV., and the royal family generally; and commence our quotations with a passage from the Preface, where Sir J. B. speaks of his fresh materials, and says, they “consist of something more than four hundred letters, all in the hand-writing of Earl Howe, and all addressed to one individual, long and high in his confidence, embracing a period between the years 1776 and 1799, on a great variety of subjects, professional and otherwise,—of several private letters to and from the Earl of Chatham,—of the noble admiral's private journal during the time his flag was up, very full, and written entirely by himself,—of various communications received from several flag-officers, and others, who served under him, and now living,—and of a few very interesting letters from his Majesty George III., and George Prince of Wales, to a member of the Howe family.”

And he goes on to make an unnecessary apology for a landsman having undertaken this biography.

“With regard to the second question: if our naval writers of novels and romances, in humble imitation of a celebrated novelist of former days, when the navy no more resembled the navy now, than their humour does that of Smollett, had not been so wholly taken up in their works of fancy and imagination—some of them tending to degrade rather than exalt the naval character—instead of applying themselves to naval biography, in which there is ample scope, the landsman would in all probability have left the task to one of the profession.”

The account of the interference of his late majesty in the matter is interesting.

“His commands (Sir J. B. tells us) on this occasion were personally conveyed to me only a few days before the commencement, or rather indication, of the fatal illness which deprived the nation of a sovereign eagerly devoted to its

honour and its interests—of a prince punctual in the discharge of his public duties, easy of access, and always ready to oblige, and to do a good-natured act—of a man kind-hearted, amiable, and affectionate in all the relations of private and domestic life. His majesty was pleased to say that, having understood I was about to employ myself in writing the Life of the late Lord Howe, he was glad to hear it was likely to fall into such safe hands, for the admiral was a great favourite with his father, and, indeed, a sort of connexion of the family; that he knew the present earl had for some time past been desirous of finding some one qualified to write the life of his grandfather, and ought to consider himself fortunate. . . . The king then entered into the history of Lord Howe's life, went over the leading features and events that distinguished it, which an extraordinary memory enabled him to do with a degree of correctness quite surprising; he pointed out some passages in the earl's life, not generally known, and which he said would require caution in touching upon, and that he was desirous of mentioning them to me. Though this interview, with which I was honoured, happened on the Sunday immediately preceding the last levee he ever held, I could not discover, on that day, any difference from his usual cheerfulness, manner, or appearance.”

We now pass to the body of the work, and commence with a few extracts of much naval interest, touching dress and discipline, or improvement.

“Perhaps it is not quite correct to say, as it has been said, that George II. conferred no distinction on the navy—he gave them what they had not hitherto had, a fixed uniform dress. From the portraits in the Naval Gallery in Greenwich Hospital, Mr. Locker has furnished an amusing account of the various modes in which our old gallant admirals were clothed. Some of these ancient heroes, at one of their clubs, resolved ‘that a uniform dress is useful and necessary for commissioned officers, agreeable to the practice of other nations;’ and a committee was appointed to wait on the Duke of Bedford, then first lord of the admiralty. Admiral Forbes was finally selected to this office: he was shewn into a room surrounded with dresses. On being asked which he thought the most appropriate, he said, ‘one with red and blue, or blue and red, as these were our national colours.’ ‘No,’ replied his grace, ‘the king has settled it otherwise; he saw my duchess riding in the park a few days ago, in a habit of blue faced with white, which took the fancy of his majesty, and he has ordered it as the uniform of the Royal Navy;’ and in 1748 it was established accordingly. We have kept the blue and the white till within a few years back, but now red has superseded the white; and thus his late Majesty William IV. restored us to our ‘national colours.’

“Lord Sandwich was not only an able man, but having himself been one of the members of the board under the Duke of Bedford, had time and opportunity of becoming well acquainted with naval affairs. He succeeded the

duke as first lord of the admiralty on 16th February, 1747, and continued in that office until the 22d June, 1761. He served a second time as first lord from April 1763, to September of the same year; and a third time from January 1771 to March 1782. By his several visitations of the dock-yards, and other naval establishments, he was enabled to make many salutary regulations in all those departments. The observations and the hints for improvements, laid down in the journals kept by himself of these visitations, are exceedingly judicious, and are among the very few documents left in the admiralty by first lords, on quitting office, where they are carefully bound up in volumes. This salutary practice since his time appears, unfortunately, to have been discontinued; it would, indeed, be in vain now to look for any private minutes or papers of first lords, however intimately connected with the naval service, or advantageous, as occasionally they might be, to their successors."

Sir J. Barrow's views of the station of first lord of the admiralty, are of much importance.

"The other qualifications necessary to enable this minister to fulfil all the duties of that important branch of the naval service, are not required to be of the very highest order. Good sense, honesty, and impartiality, are the chief requisites to carry him smoothly and plausibly through the routine of business: provided a sufficient sum of money be granted on the navy estimates, adequate to the building, repairing, and maintaining such a fleet as shall be equal to any exigency the country may require; that the selection for promotion of officers, who have rendered brilliant and meritorious services, be left to his choice and discretion, and not interfered with from other quarters; and that he be assisted by able and honest professional colleagues;—under these conditions, the minister appointed to the head of the naval department may sleep upon a bed of roses; will meet with nothing but smiling faces at his levees, and be hailed as the *decus et tutamen* of that strong arm of power, on which the safety, honour, and prosperity of the British empire mainly depend. But, unfortunately, this is not always, it may be said seldom, the state of the case. He must be content to rub on with such funds as the cabinet, or the chancellor of the exchequer, are willing to give him, and the house of commons to vote; and must not expect to act altogether as a free agent in matters of promotion. Perhaps the following brief outline will be found to convey the general nature of the qualifications, character, and duties of a first lord of the admiralty. The chief of the naval administration of the united kingdom undertakes one of the most important and responsible offices of the state. To him, and to his co-adjutors, are intrusted the proper management and direction of the great arm of our strength, and with it the highest interests of the community. Without a well-appointed and commanding naval force, the British army, and the lofty spirit of Britons, would be confined to their own shores at home, and become powerless and unknown abroad; their commerce would fall into decay, and pass into other hands; and we should once more be reproached as the *Britanni toto ab orbe exclusi*, instead, as now, known and feared, and respected, in every part of the globe. In the selection, therefore, of the minister, who is to give to this powerful machine life and vigour, and its proper direction, it must be of the first importance that his qualifications to fill the office with credit to himself, and benefit to the

country, should be well considered; he should possess a general knowledge of naval history and jurisprudence; good sense and unblemished integrity; a sound judgment and great discretion; a patient and placid temper; a courteous deportment and civil demeanour to all; an easy access to officers of every rank; and a ready and obliging acknowledgment of all applications addressed to him in writing: he should make himself well acquainted with the services and the claims of individuals of the several ranks of officers; and, although in the present overgrown state of the lists, it is not possible to comply with the multitude of claims preferred, more or less strong, yet a kind manner of receiving and replying to them, personally or by letter, goes a great way to soften the bitter pangs of disappointment, the unavoidable result of a non-compliance with what is requested. The two principal and most painful sources of vexation and annoyance, which a first lord of the admiralty must lay his account of being doomed to undergo,—and they are brought perpetually before him, and if he be endued with the proper feelings of humanity, must perpetually distress him—are, the pressing solicitations for promotion, and for employment. The scenes of disappointed expectation—of enduring poverty and hopeless misery—that are constantly forcing themselves upon him, and which he has not the means of relieving, none but himself can form any idea of; and, in portioning out the small pittance of patronage left at his disposal, and in weighing the respective claims of the numerous candidates, it is needless to say what conflicting opinions and sentiments regarding the superiority of such claims—what doubts and hesitation—must pass through his mind in endeavouring to make a just and proper decision in the selection of the fortunate individual. He has also to bear in mind that, while the claims of the officer are under consideration, the claims of the service are not to be lost sight of; and, whenever the one, however strong and cogent, may be in opposition to the other, there is but one course left to arrive at that decision. The *matériel* of the machine requires no less attention than the *personnel*, though of a different and less delicate nature. To watch over the civil concerns of the navy; to check all unnecessary expenditure in the various establishments; to keep up a supply of stores, and an efficient fleet, whenever its services may be called for, while every attention is paid to economy, require a constant, vigilant, and inquisitive superintendence. Ships must be in readiness, whether in war or peace: large fleets in the former case, and in the latter, guard-ships, experimental squadrons, or what are now termed demonstration ships, or ships kept in a certain state of preparation; besides others of various sizes to satisfy the demands of the mercantile interest; for the governors of colonies, always clamorous for naval protection; and others for the suppression of the slave trade, packet service, &c. The naval establishments at the ports; the dock-yards, victualling-yards, medical, transport, and marine departments, require occasionally the personal inspection of the first lord of the admiralty, for these are the great absorbents of naval expenditure."

We have not attempted, nor will we attempt, to follow Lord Howe from his school days to the close of his long and splendid career, as the principal facts are all familiar to the public; but we cannot refrain from selecting a few of the characteristic anecdotes with which the author has enlivened his narrative. When the

Duke of York (the brother of Geo. III.) was sent to sea, we are told,

"Captain Howe having equipped his young *élève* in the true Portsmouth fashion, the captains of the navy then present attended him in their boats on board, where they were severally introduced to the young midshipman. An anecdote is told, which being highly characteristic of the true simplicity of seamen, is not unlikely to have occurred. A sailor standing with some others on the fore-castle, and observing what was going on, whispered his messmate, 'the young gentleman a'n't over civil as I think; look, if he don't keep his hat on before all the captains!' 'Why, you stupid lubber,' replied the other, 'where should he larn manners, seeing as how he never was at sea before!'"

But the stories of the glorious first of June, are worthy of a niche by themselves:—

"As the Charlotte was advancing down towards the French line, with a determination to pass through it, it appeared so close a id compact, that Lord Howe expressed a doubt, whether there was room to pass between the Montague of 120 guns, and the Jacobin of 80, which had stretched partly under the lee of the former, as if afraid of the Charlotte's broadside, thus occupying the place it was intended the Charlotte should take. Lord Howe, however, was determined to pass through, or run on board the enemy's flag-ship or the Jacobin; on which Bowen, with that blunt and resolute tone so peculiarly his own, called out, 'That's right, my lord, the Charlotte will make room for herself.' On his first appointment to the Queen Charlotte, this unpolished but shrewd and clever seaman was in the habit, in addressing the commander-in-chief, or replying to his questions, of frequently, almost constantly, using the expression, 'My lord.' One day Lord Howe said to him, 'Bowen, pray, my good fellow, do give over that eternal my lord, my lord; don't you know I am called Black Dick in the fleet?'—the sobriquet by which he was generally known to the sailors. Just as the Charlotte was closing with the Montague, Lord Howe, who was himself conning the ship, called out to Bowen to starboard the helm; to which Bowen remarked, that if they did so she would be on board the next ship, the Jacobin; to this his lordship replied, sharply, 'What is that to you, sir?' Bowen, a little nettled, said, in an under tone, 'D—n my eyes, if I care if you don't; I'll go near enough to singe some of our whiskers.' Lord Howe heard him, and turning to his captain, said, 'That's a fine fellow, Curtis.' Some time after the battle, a deputation of the petty officers and seamen requested Bowen to ask Lord Howe if they might have the gratification of congratulating his lordship on the victory he had gained, and of thanking him for having led them so gloriously into battle. On receiving them on the quarter-deck, Lord Howe himself being on the front of the poop, was so affected, that he could only say, with a faltering voice, and his eyes glistening with tears, 'No, no, I thank you; it is you, my brave lads—it is you, not I, that have conquered.' The honest and blunt Bowen, in telling this to a friend, said, 'I could myself have cried most heartily to see the veteran hero so affected.' Shortly after the return of the Charlotte to Portsmouth, Lord Howe sent for the first-lieutenant, Larcom, whom he thus addressed:—'Mr. Larcom, your conduct in the action has been such that it is necessary you should leave this ship.' Larcom, who was as brave as his admiral, a good officer and seaman, was thunderstruck,

and, with tears in his eyes, exclaimed, 'Good God! my lord, what have I done? why am I to leave the ship? I have done my duty to the utmost of my power.' 'Very true, sir,' said Lord Howe; 'but leave this ship you must; and I have great pleasure in presenting you with this commission as commander, for your conduct on the late occasion.' It appears to have been at the particular solicitation of Sir Roger Curtis that the *Cæsar* was appointed to lead the van in the order of battle on the 29th of May, much against the opinion of Lord Howe. Circumstances, however, occurred on that day which induced Lord Howe to nominate another ship in her place: but he again yielded the point, on Sir Roger's earnest request to give him another trial, remarking, at the same time, 'You have mistaken your man; I have not.' On the 1st of June, when the *Cæsar* hauled up instead of going through the enemy's line, Lord Howe, who was standing on the poop of the *Queen Charlotte*, tapped Sir Roger on the shoulder, and, pointing to the *Cæsar*, said, "Look, Curtis, there goes your friend; who is mistaken now?"

"A curious incident is said to have occurred on board the *Marlborough*\*. When she was entirely dismasted, and otherwise disabled, by the extreme severity of the conflict, the captain (the Hon. G. Berkeley), and the second lieutenant (Sir Michael Seymour), severely wounded; the latter having his arm shot off, and the ship so roughly treated, that a whisper of surrender was said to have been uttered, which Lieutenant Monckton, overhearing, resolutely exclaimed, 'he would be d—d if she should ever surrender, and that he would nail her colours to the stump of the mast.' At this moment a cock, having by the wreck been liberated from the broken coop, suddenly perched himself on the stump of the main-mast, clapped his wings, and crowed aloud; in an instant three hearty cheers rang throughout the ship's company, and no more talk of surrender. At the same time the *Aquilon* frigate, commanded by the Hon. Sir Robert Stopford, seeing the helpless state the *Marlborough* was in, came to her assistance and towed her out of the line. The gallant admiral, in reply to a question about the cock, says, 'It partakes of a cock-and-a-bull story, but there is no mistake in the cheers of the crew on my taking her in tow.' It is, nevertheless, a true story: through the kindness of Sir Thomas Hardy, an inquiry was made among the old pensioners of the *Marlborough*, in Greenwich Hospital, and two of the most intelligent, Alexander Boswell and William Brett, fully corroborate the circumstance; and the latter states that, on the arrival of the ship at Plymouth, the cock was given to Lord George Lennox, the governor, by desire of Captain Berkeley. Lady Hardy has been good enough to ascertain from her aunt, Lady Mary Lennox, that the story is perfectly true, that the cock lived to a good old age, and that while the *Marlborough* remained at Plymouth it was daily visited by parties of her crew. His Ma-

\* Elsewhere it is stated,—"Our superiority, in addition to the skill of the dear commander, lay in the resolution and firmness of the common sailors of which, amongst many others, one occurred on board the *Marlborough*: to this ship two of the enemy were so close, that one of the sailors said 'he would visit them on board their own ship.' As he was going to leap over, one of his comrades called after him to take a cutlass with him, which he refused, saying 'he should find one there'; and on being called back, actually returned with two of the enemy's cutlasses in his hands. On board the *Queen and Invincible*, the sailors who had their arms taken off in the engagement of the 29th, went into the cockpit on the 1st of June, to assist the surgeons, and encourage the poor men who were to submit to the same operation, by declaring it was much less painful than it appeared to be, and that they felt no pain from the wounds."

esty's ship the *Brunswick* had a large figure-head of the duke, with a laced hat on. The hat was struck off by a shot in the battle. The crew of the *Brunswick*, thinking it a degradation that a prince of that house should continue to be uncovered in face of the enemy, sent a deputation to the quarter-deck, to request that Captain Harvey would be pleased to order his servant to give them his laced cocked hat to supply the loss. The captain, with great good-humour, complied, and the carpenter nailed it on the duke's head, where it remained till the battle was finished. One of the sailors of this ship, in a letter to his wife at Newton Abbot, makes the following very shrewd and sensible remark:—"This dreadful battle happened on a Sunday; and if the French have rejected that day out of their calendar, God Almighty has shewn them that he has not left it out of his." Nothing could exceed the gallant conduct of the *Brunswick* in her action with the *Vengeur*. One of the bower-anchors of the former being shot away, the cable ran out its whole length, and the ship in rounding fell close alongside the *Vengeur*. In this situation, being observed by Captain Henry Harvey, the brother of the commander of the *Brunswick*, who afterwards fell on that day, he stood to their relief in the *Ramillies*, and poured such a tremendous and destructive fire into the *Vengeur*, that, just after the conclusion of the battle, she went to the bottom. The *Defence*, Captain Gambier, behaved most gallantly, and was terribly cut up, and totally dismasted. She was one of the few that passed through the enemy's line, got into the midst of the French ships, and lost her main and mizen-masts. Captain Gambier was an excellent officer, and a gentleman of strict principles of religion and morality. At the close of the action, Captain Pakenham, a rattling, good-humoured Irishman, hailed him from the *Invincible*: 'Well, Jimmy, I see you are pretty well mauled; but never mind, Jimmy, whom the Lord loveth he chasteneth.' Another incident took place in the little *Defence*: the lieutenant of the after-part of the main-deck, seeing a three-decker, the *Republicain* (which shot away her remaining mast), suddenly bearing down towards them, struck with a kind of momentary panic, ran up to the quarter-deck, and, addressing the captain with great eagerness, exclaimed, 'D—n my eyes, sir, but here is a whole mountain coming upon us; what shall we do?' Captain Gambier, unmoved, and looking gravely at him, said, in a solemn tone, 'How dare you, sir, at this awful moment, come to me with an oath in your mouth? Go down, sir, and encourage your men to stand to their guns, like brave British seamen.' On asking Captain (then Lord) Gambier, some years afterwards, if the story was true, he replied, he believed something of the kind occurred. \* \* \*

The crew of *L'America* ran below, and, when taken, assured Hugh Conway that it was only a *ruse de guerre*, as they had intended popping out upon him when he should attempt to board; but somehow the manœuvre failed, which seems truly astonishing. They say we acted very unfairly, by not informing them we intended to attack them the day we did, which happened precisely the day they did not expect it, after having been regularly prepared for it for several days preceding that ill-chosen one. To this reasonable objection for our breach of etiquette, we may attribute the assurance of the captain of the *Northumberland* to Captain Bertie, that we were entirely deceived if we imagined we had gained a victory; it was not even worthy of the name of combat;—'Ce

n'est qu'une boucherie où vous n'avez montré ni science ni tactique.' I think the ferocious courage that could dictate this observation, from a man who was a prisoner to his conqueror, is worthy of admiration, and of a piece with that of the Jacobin, who fired her upper guns when her lower deck was under water. The officers of the *Vengeur* were carrying prisoners to one of our ships, when theirs went down; and when our people were scarce able to support the sight of our enemies in their horrid situation, the French devils looked on the catastrophe of their countrymen with perfect coolness. The cartridges on board the French ships, taken and used in the fleet generally, were mostly made of the fine painted church music used in the cathedrals, and of the *preuves de noblesse* of the principal families, many hundred years old, and illuminated with the genealogical tree. There was a decree of the Convention for applying the archives of the nobility to that particular purpose. \* \* \* I think I have now sent you all my stories, except that Tom Pakenham, having fired away in a very rude style on one of the French men-of-war, and observing they did not answer the compliment in the manner he expected, stopped his fire, and desired to know if the ship had struck. On being answered, they had not, he hallooed out, in great rage, 'Then, d—n ye, why do you not fire?' Remark that one of the enemy's ships had shot away the top-masts of one commanded by his particular friend, Pakenham declared with an oath, 'I'll pay you for that;' and, bearing down on the Frenchman, he gave him a broadside for the affront offered to his friend."

The latter anecdotes are from a letter of Lady Mary Howe's, giving a very interesting description of the king and queen's visit to Portsmouth, on the return of the victorious fleet; to which the following particulars also belong.

"My father's knees trembled with emotion when he kissed the king's hand, who presented him with a most magnificent sword set with diamonds, and afterwards with a gold chain, to which is to be hung a gold medal struck for the occasion; which is also given to the other admirals and captains who have contributed to this victory, considered as the greatest ever obtained on the sea. My father afterwards kissed the queen's hand; and then his flag was lowered and the royal standard raised to the main-top-mast's head, and saluted by the whole fleet. The royal family then went into the cabin, and appeared happy and comfortable to the highest degree, giving us a thousand proofs of the kindest interest. About three o'clock they went to dinner; after which the king gave a toast, drank by all at the table—the princesses, the prince, Lady Courtown, Lady Caroline Waldegrave, Lady Frances Howard, mamma, and I, my father waiting on the king and queen—and this toast was pronounced in the most solemn manner, 'May her great admiral long command the *Queen Charlotte*, and may she long be an example to future fleets!' A short time after this, the whole royal family walked through the ship's company, drawn up in line, when my father told the king aloud, 'that their diligence and propriety of conduct, in all respects, since the victory, was not less commendable than their resolution and bravery during the action.' Nothing during the day was more pleasing to me than this walk through these brave fellows, every one of whom I am certain would attend my father to a cannon's mouth, and all of whom have exposed their lives for him. \* \*

The French monsters were so persuaded their fire must sink our ships, that nothing could convince them they had not sunk several. The officers of the *Impetueux*, prisoners on board our ships, assured Captain Payne they had seen with their own eyes a ship, painted red and black, which had particularly troubled them by sticking close to them, go to the bottom, and no declaration of Jack Payne's, that he and his Russell were both above water, could make them credit his assertion. As so many declared themselves eye-witnesses of this fact, Payne and his ship must henceforth be considered as *revenants*, for at Portsmouth they or their ghosts certainly are at this moment. I will now only add some of the toasts that have been given, and also used on transparencies — 'May the French ever know Howe to be master of the sea!' — 'The two first words of the Third Psalm.' — The day we sailed in the *Aquilon*, the king gave — 'The Admiral, with the Union on the top-mast head; he who alone deserves to wear it.' The common acclamation of the mob at Portsmouth was, 'God save the King, and Lord Howe to defend him!' . . . . . A good omen: the Brunswick sunk the Jacobin; and amongst all the sovereigns at the heads of the ships, though many were severely wounded, not one crown was either shot or even scratched. This is a fact."

To these we shall only add an anecdote belonging to a different period, viz, to Lord Howe in his old age, and happy retirement, at Porters, in Buckinghamshire.

"Lady Howe received frequent visits from the queen and young princesses at Porters. She was a lady rather particular with regard to the keeping a good table, and at one time had a French cook. Lord Howe was always exceedingly temperate in his habits: his appetite was small, and even when well he lived in the plainest manner, and when not in health generally dined alone at an early hour. At such times, the French cook waited on him in the morning to take his order for his own dinner, which, day after day, for nearly three weeks, was 'a boiled chicken.' The cook, who could not understand the regular simplicity of Lord Howe's taste, began to fancy this adherence to the same plain dish was intended as some slight upon his professional skill, and one morning he ventured thus to address him: 'Mi lor, I get superbe pay, and I have notin — not much to complain.' 'Well' said Lord Howe, impatiently, 'what do you complain of?' 'Mi lor, dat you do not allow me de honor to cook your dinner.' 'I thought you cooked it every day!' said Lord Howe. 'Yes mi lor, dat is, I boil de shicken, but dere is no cookery in dat.' 'Then,' said Lord Howe, 'you may roast de shicken to-day.'"

We have now only to add, that Lord Howe's own log of the battle of June 1st is a document of extreme interest; nor is the author's account of the mutiny at the *Nore* less so. Both shew that the former well deserved the title of *the sailor's friend*, and the latter, the honour of being his biographer. As minute critics, however, we must protest against his use of the vile adjective, "talented," and the vulgar use of "laying," at p. 56. Some severe strictures on Lord Hood appear towards the close of the volume, which is concluded by a short but well-drawn parallel of the characters of our three greatest naval commanders, Howe, St. Vincent, and Nelson. The following, with which we end, may be received as a peice of recent intelligence respecting the Falkland Islands.

"Recently (says Sir John) they have been

claimed by a puny government, which calls itself the republic of Buenos Ayres, regardless of which, the British government has now resolved to establish and plant them as a colony. They contain many good harbours, are directly in the route round Cape Horn, and, if we may judge from the circumstance of 30,000 head of cattle found running wild upon one of them, the soil will prove not unfit for grazing, or even for cultivation."

*Diary, illustrative of the Times of George IV., interspersed with original Letters from the late Queen Caroline, &c. 2 vols. 8vo. Colburn.*

Nor having been able to finish even the first volume of this publication, it is only its extraordinary nature which induces us to give it a prompt and partial notice. Too near the time to which it refers to be otherwise than objectionable, that fault is aggravated, to an incredible degree, by the character of its contents. Not only the idle gossip, but the most scandalous slanders and atrocious libels which circulated among a profligate portion of the court — profligate and vicious, or the parties never could have spoken of such subjects — are here retailed, with full particulars, names and dates: and the mass of pollution is rendered doubly offensive by an odious cant of morality and religion in the shape of observations and reflections, that sicken us at every page, and over every anecdote of shame and guilt. How the public will appreciate this we know not; but we are inclined to think that neither the doers of the work, nor its promulgators, will find that they have spread for themselves a bed of roses.

This week we must confine our illustrations.

"There was much talk yesterday at dinner about Mr. Greville; the Princess hates him — she says, he is so mischievous and so tattling: she added, 'I could forgive him for any thing he said of myself, because I have good broad shoulders; but he calls my daughter an abandoned little thing, and damn me [she often swears that oath,] if ever he shall meet her in this house again. The case was, you see, that Mr. Greville abuse all the royal family to her, *vich was a great impertinence as I should say, and she, poor little ting, wanted to excuse dem*; so *wen Mr. Greville, in his wisdom, said it was pity de duke should have his mistress here, vare de princess was, she answered, 'Oh, Lord upon us! vat would you have? de dukes cannot marry, dey must love somebody.'* It would have been better had my daughter said, as one should say, dat is a subject on which I never speak: but she is a young ting, and not prepared for such matters. No, no, let us speak no more of Mr. Greville, 'tis such an unpleasant subject.' It is strange that every person, even the most profligate, abuses Lady —; yet they all receive her and visit her. Lord — said, the other night, that she had as much murdered — as if she had pulled the trigger which had shot him. He then proceeded to say, that it was not so much from losing herself, as from a diabolical deceit she practised upon him respecting one of her children. It seems that, at the time she left him, she had one daughter by him, whom she loved very much, but upon whom the husband doated also; so, in order not to part with this girl, she feigned its sickness and death, and buried a dead kid instead of the child, at Leghorn, and sent the girl away to England; and she sent her under the care of —. I shall never look at that man again without dislike. Think of any one kidnapping another's child, and to

please a woman! The wretched father wept his lost child for some time; and when it was convenient to Lady — to rid herself of the child, she had the kid disinterred, in proof of the deception which she had practised, and informed the father that she sent him back his daughter alive and well. The shock proved too great for the unhappy man, who went mad and shot himself; and the villany has hitherto remained unpunished, and the perpetrator of this tragedy can walk about in peace. Oh! surely not in peace! People generally end this tragic tale by saying, 'Poor —! he was a great fool!' It will be better at the day of judgment to be that great fool, than the woman who is dignified with the false epithet of clever."

This Surface morality is a fit sequel to the royal delicacy before recorded; and of the writer's own elegance we subjoin a specimen.

"Nothing but smothering heat, and parties that melt one into inanity. To go into the streets is to endure the fiery ordeal (which none of us here at present can well abide); and to venture into an evening assembly is to tumble into a kettle of boiling sprats."

Another:—"The princess is always seeking amusement, and, unfortunately, often at the expense of prudence and propriety. She cannot endure a dull person: she has often said to me, 'I can forgive any fault but that;' and the anathema she frequently pronounces upon such persons is,— Mine G—! dat is de dullest person G— Almighty ever did born!"

Another:—"Thursday.—Lady — was sent to the cottage to fetch away books, &c., which had been left there. She heard that Chanticleer was ill — amiable distress, interesting dénouement! I dined at Kensington. There was no one besides the princess, except Lady —; we dined off *mutton and onions*, and I thought Lady — would have degobbled with the coarseness of the food, and the horror of seeing the princess eat to satiety: afterwards her royal highness walked about Paddington Fields, making Lady — and myself follow. These walks are very injudiciously chosen as to time and place, though perfectly innocent, and taken for no other purpose than for the pleasure of doing an extraordinary thing. It was almost dark when the princess returned home in the evening."

"The princess went to the play, a resource she always reserves to herself, to escape from a dull dinner. She was accompanied by Lord Fitz—d, her lady in waiting, and myself. After the play, I was invited to sup with her royal highness: as usual, she talked of her own situation, and her previous life. 'Judge,' said she, 'what it was to have a drunken husband on one's wedding-day, and one who passed the greatest part of his bridal-night under the grate, where he fell, and where I left him. If any body say to me at dis moment will you pass your life over again, or be killed, I would choose death—for you know, a little sooner or later, we must all die; but to live a life of wretchedness twice over—oh! mine God, no! Well, time went on, and de case was I began to be wid child, and all de wise people said so; but I pitied dem, for I no more believed it daa any ting for long time—at last, Charlotte was born. Well, after I lay in—je vous jure, 'tis true—upon my honour, upon my soul, 'tis true—I received a message, through Lord Cholmondeley, to tell me I never was to have de great honour of inhabiting de same room wid my husband again. I said very well; but, as my memory was short, I begged to have dis polite message in writing from him. I had it—and was free: I left Carlton House, and went to

Charlton. Oh, how happy I was!—every body blamed me; but I never repented me of this step. Oh, mine God, what I have suffered! Luckily, I had a spirit, or I never should have outlived it.”

Beautiful traits! What a pity that we have not room or space for more?!! But, like “the Book,” or, rather, “the Spirit of the Book,” connected with the same subject, no doubt this work will sell to a great extent.

*History of the King's German Legion.* By North Ludlow Beamish. Vol. II. 8vo. Pp. circ. 680. London, 1837. Boones.

Five years have elapsed since we were called upon to notice the first volume of this work, and we have to refer readers to our No. 818, September 22, A. D. 1832, and p. 595, for the few remarks by which we commended it to the public, as peculiarly acceptable to the gallant corps whose services it commemorated, to its friends and companions, and to the world at large, admiring and being interested in its exploits. The second volume continues the narration from the siege of Badajoz, May 1811, to the final disbanding of the legion after the victory of Waterloo, to which it so heroically contributed. Napier's works, Jones's sieges, Batty's “Western Pyrenees, and Campaign of 1815,” and other publications, are quoted throughout; but the more particular and curious portions of the history are from the MS. journals of officers and civilians concerned in the transactions which they describe. From these, therefore, we will draw a few of the popular features, as specimens of the whole. We set out with an account of General Alten, who was wounded at the battle of Salamanca, and obliged to leave the field.

“General Alten's wound was caused by a carbine ball, which, penetrating the thigh, grazed the bone, and the effusion of blood was with difficulty so far stopped, as to allow of his being taken on horseback to Salamanca, where, about ten o'clock, the wound was dressed. Before leaving the field, the general directed his aide-de-camp, Captain Linsingen, whom he left with Colonel Arentschild, to inform him immediately if any doubt should be entertained of the result of the action, as he would on no account fall into the hands of the French. About three o'clock Linsingen sent word that the event was doubtful. Alten instantly rose, and, although told by the surgeon that, by displacing the bandage, his life would be endangered, he insisted upon being dressed and placed upon his horse; and the general had actually ridden a mile out of the town, on the Rodrigo road, when another messenger reached him, saying that the order to attack had been given, and no doubt was entertained of the result being favourable to the allies. Unwilling, however, to return without more accurate information, he remained for some time on the spot; until, judging by the sound of the firing in the attack of the third division, that the enemy were in retreat, he quietly returned to his quarters, having been on horseback nearly two hours. Fortunately no bad consequences resulted from the zealous imprudence of the gallant general.”

Soon after we have another good military story connected with the pursuit of the scattered enemy.

“The rear-guard of the beaten army took advantage of the respite thus afforded them, and halted about four miles distant, on the road to Olmedo. But the hussars were not idle, and Cornet Blumenhagen, who had the command of the party sent in this direction, brought in thirty prisoners. In the evening

this list was increased to nearly sixty; for, to the astonishment of all the brigade, the patrol, which had been sent to Blasco Sancho, consisting of only a corporal and five men, returned, bringing two officers and twenty-three well-mounted troopers! These belonged to a corps of Spanish chasseurs, which had been lately equipped for the service of King Joseph, and were under the command of French officers at Blasco Sancho, where they were surprised by the patrol. In this enterprise a private of the German hussars, named Kastorff, was the principal actor. After capturing four chasseurs, who were posted as videttes outside the village, he proceeded to a house in which the rest of the detachment were stationed, and, directing two of his comrades to fire through the windows, entered the house alone, and, single-handed, drove two officers, five non-commissioned officers, and eighteen chasseurs, from one room to another, until, at length, completely intimidated, they surrendered! Twenty-nine horses were found in the stables, and the whole were safely delivered at the head-quarters of the brigade. This exploit was considered worthy of notice in Lord Wellington's official despatch, and, by the special order of the commander-in-chief, the gallant hussar was promoted to the rank of corporal.”

At Bayonne on the following year (1813) we have a parallel of equal intrepidity in the ranks of the legion.

“The flag-staff at the stern of a French corvette was carried away by an eighteen-pound shot, and the ensign which it bore, fell into the water; seeing which a private of the first light battalion of the legion, named Lehmann, throwing off his accoutrements, jumped into the river and made for the flag. A heavy fire of musquetry was immediately poured upon him from the deck of the corvette, but being an expert swimmer, he evaded the shot, and brought away the flag in triumph. This exploit was rewarded by a liberal subscription from the officers who witnessed it, and Lehmann, a social spirit, employed the donation in treating the men of his company to a bottle of Lafitte each. This brave fellow was also a singular character: Previous to entering the legion, he had served in the West Indies, and there acquired a taste for strong liquors, but he never suffered this propensity to interfere with his duty, and, after receiving the balance of his pay, used regularly to apply for leave of absence from evening roll-call, and quietly spend his money in one sitting. Wishing to re-visit his home and friends in Hanover, after the cessation of hostilities in 1814, he took his discharge from the legion, and was considered to have left the service altogether; but on the 17th of June 1815, just after the first light battalion had arrived in the position of Waterloo, Lehmann made his appearance, and offered his services as a volunteer in the company to which he formerly belonged! They were accepted; but the gallant soldier shared the fate of many a brave man in the fierce contest of the following day, and fell,—although a simple Hanoverian rifleman,—worthy of a place among the best and bravest of his distinguished comrades.”

The conclusion of the war in 1814 is thus recorded.

“The mortified feelings of the French officers at the termination of the war, led them to frequent acts of unprovoked insult towards the officers of the allied army; duels were of constant occurrence, and among the rest an affair in which Lieutenant von Düring of the fifth line battalion of the legion was concerned,

excited considerable notice. In this case the French officer had invited several ladies ‘to see him shoot a British officer;’ but they only assembled to see the vain braggart fall; for the Frenchman's pistol missed fire, and Düring's ball killed his opponent on the spot. This duel had the good effect of stopping all further insult on the part of the officers of the garrison of Bayonne, who, it is but justice to the French army generally to add, reckoned amongst them many men who had been lately promoted from among the non-commissioned officers and the ranks.”

But Waterloo itself supplies the most interesting portion of this eventful history; and the defence of La Haye Sainte by the Germans, under their gallant leader, Baring, ranks among the brightest glories of that glorious day. We cannot resist the temptation to extract.

“It was about five o'clock. The attack was made by a preponderating force of not less than three divisions of the French army, which advancing in close column, surrounded the place. Baring's soldiers met the onset with firmness, levelling their trusty rifles with certain aim against the dense masses of the enemy; every bullet took effect, and often more than one assailant fell before the single ball of a German rifleman. The French, however, advanced with unshaken firmness. Regardless of the fire, they threw themselves against the walls of the buildings, and endeavoured to wrest the arms from the hands of the Germans through the loop-holes, or, rushing upon the open gateway, braved the bayonets of the defenders. This being a weak point, the assailants seemed confident of being able to force in; but the little garrison knew its value, and not an opening was given. Man after man was bayoneted by Baring's unyielding soldiers at this gateway, until the slain actually formed a rampart for the assailants; but still no entrance was given, and the furious contest continued to rage. On examining into the state of his ammunition, Major Baring found that the continued firing had reduced it one-half, and he immediately sent an officer to the brigadier with a request for a fresh supply. But no rifle ammunition was to be had: the cart which should have brought it, was upset in the general confusion that existed on the Brussel's road, and no other means of supply were at hand: This calamity was unknown to Major Baring; and some time having elapsed without the expected arrival, he despatched another officer to the rear, with the same request. The skirmishers of the fifth line battalion, under Captain Von Wurmb, were now sent to his assistance. Wurmb was killed at the head of his men. Serviceable as this detachment was, it could not compensate for the want of ammunition; and, after maintaining an uninterrupted contest for half an hour longer, a third messenger was sent off for a supply. This proved as fruitless as the two former requisitions. However, two hundred Nassau troops were added to the numbers of the little garrison, and the desperate struggle raged on. The principal contest was carried on at the open entrance to the barn. Against this every effort that the most determined courage, and the most untiring exertion could make, was directed by the enemy. But in vain: every Frenchman who attempted to cross the threshold fell a sacrifice to his temerity. At length the assailants finding themselves completely baffled at the gateway, gave up the hope of being able to effect an entrance into the buildings by direct assault, and resorted to the expedient of setting the barn on

fire. A thick smoke soon issued from the thatch, and spread alarm among the defenders; for although there was no want of water in the court, all means of conveying it had been broken up, and the greatest consternation prevailed. Luckily, a happy expedient suggested itself to Major Baring, who observing the large cooking-kettles that were carried by the Nassau troops, tore one of them from the back of a soldier, and filled it with water. Several officers did the same: the men followed this example, and, facing almost certain destruction, boldly carried the water to the flaming barn. Soon all the kettles of the Nassauers were employed in this work, and the fire was eventually extinguished: but many a brave man had fallen, and many more, covered with wounds, continued to expose themselves with a degree of devotion beyond all praise. Among the most conspicuous was Frederick Lindau, a private of the second light battalion, who, although bleeding profusely from two wounds in the head, stood firmly at the small door of the barn, and from thence defended the main entrance. Baring, seeing that the cloth about his head was not sufficient to stop the effusion of blood, repeatedly called upon him to go back; but Lindau, regardless of his wounds, as of a large bag of gold which he had taken from the enemy and carried about his person, refused to stir from the spot, saying: 'He would be a scoundrel that deserted you so long as his head is on his shoulders!' This gallant fellow was afterwards taken prisoner and lost his treasure. More than an hour was occupied in this second assault of the farm; and now the French, tired from their fruitless efforts, again fell back. The relief thus given to the Germans may be well imagined, but the anxiety of their commander was little diminished; every new attack served more and more to impress upon him the importance of the post, and more clearly to place before his eyes the deep responsibility of the command with which he had been intrusted. Placed with a small body of men in an isolated position, on the retaining of which, the lives of his soldiers,—his own honour—perhaps the safety of the whole army, depended; and where he would, in all probability, be called upon to make a decision involving all these considerations—Major Baring could not but feel a painful anxiety for the result, which none of the means at his disposal were adequate to remove. On counting the remaining cartridges, he found that the men had not, on an average, more than from three to four each! The gallant fellows made light of their wounds and bodily fatigue; they spared no exertion to repair the fractured walls and defences of the place, but they could not be insensible to the helpless condition in which they were placed by the want of ammunition, and made the most reasonable remonstrances to their commanding officer on the subject. These were not wanting to cause urgent representations of his critical situation to be sent in by Major Baring, and he finally reported that without another supply of ammunition, he would be utterly unable to sustain another attack. But, all was in vain; no ammunition arrived, and the enemy's columns were again seen advancing on the farm! 'At this moment,' says the gallant officer, 'I would have blessed the ball that came to deprive me of life; but more than life was at stake.' The conduct of the second light battalion of the legion on this memorable day—their complete abandonment of all consideration for their personal safety—the enthusiasm with which they rallied round their brave leader—the devotion with which they voluntarily sacrificed them-

selves to the cause of Europe and their country, may have been equalled, but has certainly never been excelled. On Baring exhorting his men to courage, and economy of their ammunition, one unanimous reply broke from them;—'No man will desert you; we will fight and die with you!' But this history would assume the garb of romance, were the various traits of heroism to be recorded here which distinguished the soldiers of the King's German Legion on the memorable field of Waterloo. The French columns again closed upon the devoted farm; and, irritated at the protracted opposition which was made, renewed the attack with redoubled fury. Finding the same resistance at the open gateway, they again attempted to fire the barn, but this was defeated by the same means which had succeeded before; now, however, every shot fired by the brave defenders rendered their situation more critical, and Baring, for the last time, sent an officer to the rear, saying, 'that he must, and would give up the place, if no ammunition was sent him:' the same cause which first prevented a supply, rendered this message also ineffectual. The fire of the defenders now gradually diminished; they called loudly on their commander for ammunition, adding, 'we will readily stand by you, but we must have the means of defending ourselves.' Baring's feelings may be imagined! The officers now represented to him the utter impossibility of retaining the place under the existing circumstances, and the French, at the same time, mounting the roof and walls, and pressing through the open gateway, which could no longer be defended, he reluctantly gave the order to retire from the yard into the rear garden. Wishing, however, to counteract the bad impression which this movement was likely to make upon the men, he left the dwelling-house occupied, and under the charge of the same officers who had proved themselves so worthy of the trust. The passage to the interior of this house was very narrow, and many of the men, while crowding in, were overtaken by the enemy, who vented their rage upon them in the lowest abuse, and the most brutal treatment. Here it was that Ensign Frank, who had already been wounded, was furiously attacked by two French soldiers; the first he ran through with his sabre, but, at the same moment his left arm was broken by a ball from the second: in this condition he sought safety in one of the inner rooms of the house, and managed to conceal himself behind a bed. Two men of the battalion also endeavoured to secure themselves in the same room, but the French followed, refusing quarter, and shot them both before his face; Frank, however, had the good fortune to remain concealed until the farm was retaken by the allies. The dwelling-house being now in the hands of the enemy, Baring saw that it would be impossible to retain the garden, and, therefore, directed the men to retire, as well as they could, to the main position; the detachments that had joined him as reinforcements, returned to their respective corps, and with the remnant of his brave followers, he joined the first light battalion in the hollow road behind the farm. Here the combat again raged, and many men and officers were struck down: of the first light battalion, Captain Henry von Marschalck, who throughout the day had exhibited a degree of coolness and bravery that could not be excelled, was killed; Lieutenant Albert also fell; Captain von Gilsa had his right arm shattered; Lieutenants Wolrabe, Leonhardt, Behne, Minusir; Captain Christian Wynecken, Lieutenants Koester,

Gibson, Genakow, and Adolph Heise, were wounded, the three first severely; of the second light battalion, Lieutenants Frederick Kessler, Luidam, Riefkugel, Tinman (adjutant), Knop and Meyer, were wounded, the greater number severely, and the gallant Lieutenant Grome, as he swung his cap in the air to cheer on the men, had his right arm shattered. In the retreat from the buildings, Captain Holtzmann and Lieutenant Tobin had been taken prisoners, the latter as well as Lieutenant Carey, being wounded; Major Hans von dem Bussche, of the first light battalion, was also severely wounded in the right arm, and was afterwards obliged to suffer amputation; Major Baring had many narrow escapes: four balls entered the cloak which was strapped in front of the saddle of the dragoon horse which he accidentally happened to meet with when his own was shot; another ball knocked off his hat, and just at the moment when he had alighted to pick it up, a sixth ball entered his saddle! The reader will, perhaps, be interested in learning how the day closed with the gallant Major Baring, whom we left in search of the remnant of his brave battalion: after riding about for some time in an almost distracted state of mind, smarting from the pain of his wound, and vainly seeking some trace of his men, he was accidentally informed that they had been obliged to leave the field from the want of ammunition; soon afterwards the cry of 'Victory' met his ear; the allied line advanced; Baring, having now no men to command, joined the first hussars of the legion, and, with them, followed the enemy in the final pursuit by the cavalry brigade of Sir Hussey Vivian. The halt having taken place, he again sought his battalion, and anxiously inquired after the missing officers and men. The invariable reply was, 'killed;' 'wounded;' out of three hundred and seventy veteran soldiers with which he had commenced the battle, a mere handful remained effective. Depressed by feelings of bitter regret for the loss of his brave companions, and exhausted from the pain of his wound, he lay down to rest upon some straw which the men had collected for his use: on waking the next morning he found himself lying between a dead man and a dead horse." We rejoice to add, "This distinguished officer has since been raised to the dignity of baron in his own country, and now commands the garrison of Hanover with the rank of major-general. The gallant Krauchenberg, also, who holds so conspicuous a place in the first volume of this history, has been similarly ennobled and promoted."

Respecting the final results of this dreadful strife it is stated:—

"The losses of the contending armies in this great battle were enormous. Out of seventy-five thousand French soldiers, scarce forty thousand effected their escape, and six hundred officers, and fifteen thousand men were killed and wounded in the army of Wellington. The brunt of the action fell chiefly upon the British and King's German Legion: of the legion alone, one hundred and twenty-nine officers, and one thousand three hundred and forty-three non-commissioned officers and men were killed and wounded, and the loss of the Hanoverian battalions, particularly of Count Kiemannsegg's brigade, was considerable."

Another anecdote of Colonel Halkett, given

\* "Count Kiemannsegg's brigade, consisting of the field-battalions Bremen, Verden, Luneburg, Grubenhagen, and Duke of York, lost twenty-three officers and ninety-eight men in killed and wounded.—Narrative of Count Kiemannsegg, MSS."

on the authority of an eye-witness, is worthy of being placed beside the foregoing:—

"Colonel Halkett's brigade consisted of new raised troops, the greater part of whom were then, for the first time, in presence of an enemy, and they became exposed to a destructive fire from the brigade of General Cambronne, which formed the extreme left of the French final attack. Halkett pushed forward his skirmishers to meet the enemy's advance; Cambronne's horse was shot under him, and Halkett, seeing the French general in front, cheering on his men, thought that a good opportunity was thus afforded him for inspiring his young soldiers with confidence, and dashing forward alone, towards the French general, he threatened to cut him down. But Cambronne dropped his sword, and surrendered himself to the gallant colonel, who proceeded with his prize to the British lines. Halkett's horse now received a ball, and fell, and on disengaging himself from the animal, he found, to his dismay, that the French general was coolly walking back to his own troops! By great exertion, however, he brought the horse again upon his legs, overtook his prisoner, and, thrusting his hand into the general's alguiette, dragged him off at a canter to the allied lines."

We observe the author states that Blucher and Wellington met personally at La Belle Alliance: a fact which we should like much to have ascertained or contradicted; especially as this supposed meeting has even given the continental name to the battle. Our belief is, that the chiefs never met there.

But, we must conclude, which we do by again congratulating these brave fellows on having had their gallant deeds recorded in so imperishable a manner. The MS. called the 'Guelphic Archives,' and contained in one of the Appendices, is a very striking paper, and cannot be read without great interest.

*Funeral Sermon, delivered in the Cloister Church at the Hague, on Sunday, 29th October, 1837, in memory of the Queen of the Netherlands.* By I. J. Dermout, D. D., H. N. Majesty's Court Chaplain. Hatchard and Son.

OUR readers are aware that the mode of preaching in the Dutch Reformed Church differs, in many respects, from our own. It is customary for their preachers, on public occasions, to address the principal personages or authorities who may be present. It thus requires considerable tact to do so without trenching on the special province of the pulpit, or making it the arena for fulsome panegyric on the one hand, or of unfair attacks on the other.

We have perused with much satisfaction the funeral oration recently delivered in honour of the late amiable Queen of the Netherlands, in presence of the royal widower and the members of his afflicted family. This discourse, which has been excellently translated from the original Dutch by Mr. James Marshall, of the Hague, is distinguished by fidelity, judgment, and good taste. Dr. Dermout, who is evidently no common man, has taken for his text the words of the Apostle Paul, Rom. ii. 29, "Whose praise is not of men, but of God." Besides the oration (for, in our opinion, such is its proper title), the prayers used on the solemn occasion are also printed in this interesting pamphlet, which cannot fail to arrest attention, and to teach a most salutary lesson to every one by whom it is perused.

"Exalted in station, extended in influence, the life of royalty, more than any other, affords a golden opportunity for the practice of the

nobler and more amiable virtues. Yet no one born beneath the shadow of a throne, or called to be the wearer of a crown, is truly great or glorious, unless, disciplined and developed in the universal school of humanity, he has learned worthily to fulfil the primal duties of our nature; and unless, under the conduct of religion, he has imbibed those virtues which, for every human being, form the most beautiful ornament. A secret but irresistible impulse of our moral feeling makes us apt to love and praise, in princes and princesses, the more eminent virtues of humanity, rather than those rarer qualities which they borrow from their lofty rank, and from the sphere of action in which their lot is cast. Spontaneously do we honour, yea, in fold, as it were, in our hearts, those among them who, in the ordinary relations of life, are distinguished only by their superior practice of what is good, and by their application, to the exercise of piety, of those exquisite means which their exalted station affords. On the grave of such, when Providence bequeaths us of them, the tears that we shed are pure—tears such as flattery cannot feign, and far more precious than the most eloquent panegyric. Such is the well-deserved homage which we offer to our queen of blessed memory, whose mortal remains were, but a few days ago, consigned to the grave amidst general mourning. Whatever lustre her proud extraction from a race renowned, whatever lustre her elevation to the throne of the Netherlands, might have lent her; whatever endowments may have been hers, of intellect and talent—and these were of no common order—she herself had chosen for her portion that noiseless but active virtue whose praise is not of men but of God. Whoever would attempt to describe that life with a faithful pen, must form to himself a sketch of what this excellent woman was for her tenderest connexions, and bring her forth from the sanctuary of domestic life. But that is a sanctuary inaccessible to unconsecrated feet. Nowhere is that sketch preserved with such fidelity as in the heart of our king, who alone knows what a tender, wise, and virtuous consort Heaven had blessed him with in her whose existence, during so many years, was so interwoven with his own—who was the faithful partner of all the vicissitudes of his life—and in whose intelligent society he loved to repose from the daily cares of state. None can more adequately extol that mother than our princes and princesses, who owe to her so excellent an education, so pious an example—who, in memorable moments of their own lives, and before the eyes of Europe, experienced her maternal love; and who now, with sweet regret, remind each other how neither distance of place, nor the approach of age, nor infirmity of body, ever withheld her from affording a mother's aid to the pledges of her love. But how, in the presence of our sovereign, shall I dare venture to pry into the beautiful and holy secrets, proper to the inner chambers of the palace? And how shall I dare proclaim in public those benevolent acts which, to our departed queen, were the luxury of life, when I remember that the charity in which she excelled should be treated as some precious jewel, which loses its lustrous purity when brought forth from its hidden repository and exposed to the breath of men. Rather let the poor speak of these in their dwellings. Rather let the book of record, which is with God, publish at the great day whatever she may have done of praiseworthy in humble imitation of that Redeemer, the greatest and most amiable eulogy of whose earthly life it was, that He went about

doing good. Not that charity appeared as the only salutary plant on the field of her existence. It was accompanied in her by a lowliness which withheld her from making a parade of her good works; by a uniform purity in walk and conversation; by a gentle affability, an humble sweetness towards all who approached her; and by a free and voluntary renouncement of the world. The world—in the course of her eventful life she had learned to know it and its vanity too well, ever to own its allurements, or, rather, not gladly to retire, as far as the duties of her station allowed, from the bustle of society, in order to commune with her God and with her own heart. In the school, and under the cross of the Saviour, she had been taught that patience by which she endured trials, and pain, and infirmity; till, like a true believer, amid the benedictions of her family, she surrendered her soul to her faithful Redeemer."

*Lockhart's Life of Sir Walter Scott. Vol. VI. Edinburgh, 1838; Cadell: London; Murray, Whitaker.*

THIS volume will not, as anticipated, finish the work, which must be extended to a seventh volume; and, when we look at the almost deepening interest of the narrative, so far from complaining, we cannot help congratulating the public on the circumstance. Among the principal subjects now brought forward, are Scott's visit to Ireland, the history of Napoleon, and the great crash among the publishers, with whom Sir Walter was so largely connected. To these events we shall turn in another *Gazette*; but, in the mean time, must content ourselves with quoting a remarkable letter on the subject of Terry and Yates's negotiation for the Adelphi Theatre, which will be perused with increase of appetite at this moment when theatrical affairs occupy a considerable degree of public attention. It is thus introduced by the editor.

"Several letters were interchanged before Terry received the support he had requested from his Scotch friends; and I must extract two of Sir Walter's. The first is, in my opinion, when considered with reference to the time at which it was written, and the then near though unforeseen result of the writer's own commercial speculations, as remarkable a document as was ever penned. It is, moreover, full of shrewd and curious suggestions touching theatrical affairs in general—from the highest to the lowest. The second is, at least, a specimen of friendly caution and delicate advice, most inimitably characteristic of Scott.

*To Daniel Terry, Esq. London.*

Edinburgh, May 5th, 1835.

"My dear Terry.—I received your long confidential letter; and, as the matter is in every respect important, I have given it my anxious consideration. The plot is a good plot, and the friends, though I know them only by your report, are, I doubt not, good friends, and full of expectation. There are, however, two particulars unfavourable to all theatrical speculations, and of which you are probably better aware than I am. The first is, that every scheme depending on public caprice must be irregular in its returns. I remember John Kemble, complaining to me of Harry Siddons's anxious and hypochondriac fears about his Edinburgh concern, said, 'He does not consider that no theatre whatever can be considered as a regular source of income, but must be viewed as a lottery, at one time strikingly successful, at another a total failure.' Now, this affects your scheme in two ways.

First, you can hardly expect, I fear, your returns to be so regular every season, even though your calculation be just as to the recent average. And, secondly, you must secure some fund, either of money or credit, to meet those blanks and bad seasons which must occasionally occur. The best business is ruined when it becomes pinched for money, and gets into the circle of discounting bills, and buying necessary articles at high prices and of inferior quality, for the sake of long credit. I own your plan would have appeared to me more solid, though less splendid, if Mr. Jones, or any other monied man, had retained one-half or one-third of the adventure; for every speculation requires a certain command of money, and cannot be conducted with any plausibility upon credit alone. It is easy to make it feasible on paper, but the times of payment arrive to a certainty. Those of supply are less certain, and cannot be made to meet the demands with the same accuracy. A month's difference between demand and receipt makes loss of credit; loss of credit is in such a case ruin. I would advise you and Mr. Yates to consider this, and sacrifice some view of profit to obtain stability by the assistance of some monied man—a class of whom many are in your great city just gaping for such an opportunity to lay out cash to advantage. This difficulty—the want of solid cash—is an obstacle to all attempts whatsoever; but there is something, it would seem, peculiarly difficult in managing a theatre. All who practise the fine arts in any department, are, from the very temperament necessary to success, more irritable, jealous, and capricious than other men made up of heavier elements; but the jealousy among players is signally active, because their very persons are brought into direct comparison, and, from the crown of the head to the sole of the foot, they are pitted by the public in express rivalry against each other. Besides, greatly as the profession has risen in character of late years, theatrical talent must still be found frequently allied with imperfect general education, low habits, and, sometimes, the follies and vices which arise out of them. All this makes, I should think, a theatre very difficult to manage, and liable to sudden checks when your cattle jibb or do not work kindly. I think you have much of the talent to manage this; and, bating a little indolence, which you can always conquer when you have a mind and a motive, I know no one whose taste, temper, and good sense, make him more likely to gain and secure the necessary influence over the performers. But, *il faut de l'argent*—you must be careful in your situation, that a check shall not throw you on the breakers, and for this there is no remedy but a handsome provision of the blunt. This is the second particular, I think, unfavourable to undertakings of a theatrical description, and against which I would wish to see you guarded by a more ample fund than your plan involves. You have, of course, ascertained from the books of the theatre that the returns of receipts are correct; but I see no provision made for wear and tear of stock, expense of getting up new pieces, &c., which, in such an undertaking, must be considerable. Perhaps it is included in the charge of 36l. per night; but, if not, it seems to me that it will materially alter your calculations for the worse; for you are naturally disposed to be liberal in such expenses, and the public will expect it. Without baits the fish cannot be caught. I do not state these particulars from any wish to avoid assisting you in this undertaking; much the contrary. If I saw the prospect of your getting fairly on the wing, nothing could give

me more pleasure than to assist to the extent of my means, and I shall only, in that case, regret that they are at present more limited than I could wish, by circumstances which I will presently tell you. But I should not like to see you take flight, like the ingenious mechanist in *Rasselas*—only to flutter a few yards, and fall into the lake. This would be a most heart-breaking business, and would hang like a millstone about your neck for all your life. Capital and talent will do excellent things together; but, depend on it, talent without capital will no more carry on an extensive and progressive undertaking of this nature, than a race-horse will draw a Newcastle wagon. Now, I cannot at present assist you with ready money, which is the great object in your undertaking. This year has been, owing to many reasons, the heaviest of my expenditure, and the least fruitful of profit, because various anxieties attending Walter's marriage, and feasting, &c. after it, have kept me from my usual lucrative labours. It has, no doubt, been a most advantageous concern, for he has got an amiable girl, whom he loves, and who is warmly attached to him, with a very considerable fortune. But I have had to find cash for the purchase of a troop for him—about 3500l.: *item*, the bride's jewels, and so forth, becoming her situation and fortune, 500l.: *item*, for a remount to him on joining his regiment, equipage for quarters, carriage, and other things, that they may enter life with a free income, 1000l. at least. Moreover, I am a sharer, to the extent of 1500l., on a railroad, which will bring coals and lime here at half price, and double the rent of the arable part of my property, but is dead outlay in the meantime; and I have shares in the oil-gas, and other promising concerns, not having resisted the mania of the day, though I have yielded to it but soberly; also, I have the dregs of Abbotsford House to pay for, and all besides my usual considerable expenditure; so I must look for some months to be put to every corner of my saddle. I could not let my son marry her like a beggar; but, in the meantime, I am, like my namesake in the days of the crusades, 'Walter the Penniless.' Every one grumbles at his own profession, but here is the devil of a calling for you, where a man pays 3000l. for an annuity of 400l. a-year, and less, renounces his free-will in almost every respect, must rise at five every morning to see horses curried, dare not sleep out of a particular town without the leave of a cross colonel, who is often disposed to refuse it merely because he has the power to do so; and, last of all, may be sent to the most unhealthy climates to die of the rot, or be shot like a black-cock. There is a *per contra* to be sure—fine clothes and fame; but the first must be paid for, and the other is not come by by one out of the hundred. I shall be anxious to know what you are able to do. Your ready is the devil—

'The thing may to-morrow be all in your power,  
But the money, gadzooks, must be paid in an hour.'

If you were once set a-rolling, time would come round with me, and then I should be able to help you a little more than at present. Meanwhile, I am willing to help you with my credit, by becoming one of your guaranties to the extent of 1250l. But, what I am most anxious about, is to know how you raise the 5000l. cash; if by bills and discounts, I beg to say I must decline having to do with the business at all; for, besides the immense expense of renewals, that mode of raising money is always liable to some sudden check, which throws you on your back at once, and I should then have hurt myself, and deprived myself of the means of helping

you some other way. If you can get such a sum in loan for a term of years certain, that would do well. Still better, I think, could you get a monied partner in the concern to pay the sum down, and hold some 2000l. more ready for current expenses. I wish to know whether, in the 36l. for nightly expenses, you include your own salary, within which you would probably think it prudent to restrain your own expenses, at least for a year or two; for, believing as I do, that your calculation of 70l. per night (five per cent on the outlay) is rather sanguine, I would like to know that your own and Mr. Yates's expenses were provided for, so as to leave the receipts, whatever they may be, free to answer the burdens. If they do so, you will have great reason to be contented. I need not add, that Theodore Hook's assistance will be *impayable*. On the whole, my apprehension is for want of money in the outset: Should you either start with marked success, or have friends sufficient to carry on at some disadvantage for a season or two, I should have little fear; but great attention and regularity will be necessary. You are no great accountant yourself, any more than I am, but, I trust, Mr. Yates is. All rests with prudence and management. Murray is making a fortune for his sister and family on the very bargain which Siddons, poor fellow, could not have sustained for two years longer. If I have seemed more cautious in this matter than you might expect from my sincere regard for you, it is because caution is as necessary for you as myself; and I assure you I think as deeply on your account as on my own. I beg kind compliments to Mrs. Terry, and inclose a lock of my gray hair, which Jane desired me to send you for some brooch or clasp at Hamlet's.—Ever yours, very truly,

WALTER SCOTT.'

An amusing extract from the Irish tour must complete this brief note.

'We were still more amused (though there was real misery in the case) with what befel on our approach to a certain pretty seat, in a different county, where there was a collection of pictures and curiosities not usually shewn to travellers. A gentleman, whom we had met in Dublin, had been accompanying us part of the day's journey, and volunteered, being acquainted with the owner, to procure us easy admission. At the entrance of the domain, to which we proceeded under his wing, we were startled by the dolorous apparition of two undertaker's men, in voluminous black scarfs, though there was little or nothing of black about the rest of their habiliments, who sat upon the highway before the gate, with a whisky-bottle on a deal-table between them. They informed us that the master of the house had died the day before, and that they were to keep watch and ward in this style, until the funeral, inviting all Christian passengers to drink a glass to his repose. Our cicerone left his card for the widow, having piously, no doubt, written on it the names of his two lions. Shortly after we regained our post-house, he received a polite answer from the lady. To the best of my memory, it was in these terms:—'Mrs. — presents her kind compliments to Mr. —, and much regrets that she cannot shew the pictures to-day, as Major — died yesterday evening by apoplexy; which Mrs. — the more regrets, as it will prevent her having the honour to see Sir Walter Scott and Miss Edgeworth.' Sir Walter said it reminded him of a woman in Fife, who, summing up the misfortunes of a black year in her history, said—'Let me see, sirs: first, we lost our wee callant; and then Jenny; and then the gudeman himsel' died; and then the

coo died too, poor hizzey; but, to be sure, *her* hide brought me fifteen shillings.' At one county gentleman's table where we dined, though two grand full-length daubs of William and Mary adorned the walls of the room, there was a mixed company, about as many Catholics as Protestants, all apparently on cordial terms, and pledging each other lustily in bumpers of capital claret. About an hour after dinner, however, punch was called for; tumblers and jugs of hot water appeared, and with them two magnams of whisky, the one bearing on its label king's, the other queen's. We did not at first understand these inscriptions; but it was explained, *sotto voce*, that the king's had paid the duty, the queen's was of contraband origin; and, in the choice of the liquors, we detected a new shibboleth of party. The jolly Protestants, to a man, stuck to the king's bottle; the equally radiant Papists paid their duty to the queen's.

*Excursions in the Abruzzi, &c.*

[Second notice.]

WE must now confine ourselves to a few brief notes, and reserve the second volume for another notice.

Mazzella, a Neapolitan historian, states that "Celano gave birth to a monk, whom he denominates Il Beato Tommaso, who, he adds, was the author of those well-known and impressive Leonine verses, sometimes called 'Scquentia mortuorum,' but better designated from their opening lines as '*Dies ira, Dies illa*.' The notice which, of late years, has been bestowed on this portion of the Roman liturgy by several authors, and the felicitous use made of it by Goethe in his '*Faust*,' may render the discovery of its original author a matter of literary interest; but I have never been able to ascertain the grounds of Mazzella's assertion."\*

Among certain sulphureous pools, not far from the Lake of Cutilia and the River Velino (a district of Pelasgian repute and the birth-place of Vespasian), Mr. C. says,—

"The Abbé Chaupy, following the opinion of Varro cited by Pliny, which makes this spot the central point of Italy, has looked upon it as identical with Virgil's lake of Arusanctus; an hypothesis which has been much disputed. An old peasant, who accompanied us in the investigation of these singular phenomena, added greatly to the interest and curiosity they inspired by the recital of a circumstance which happened about ten years before. Being at work with other labourers in the vicinity of these pools, they observed the water in one of them to sink and finally disappear in a very short space of time; leaving the sides, which were very steep, and the interior in its whole depth, entirely dry and exposed to view. On one side of the cavity, placed in circular array, they observed a row of marble steps, or seats, surrounding a large jar or urn of earthenware, closely covered with a lid of the same material, measuring about fourteen feet in height. The spectators which had collected round the basin, attracted by the singularity of the circumstance, were impressed with the notion that this gigantic vessel must contain something precious; and, after a lapse of four or five hours, they let down one of the party, by ropes fixed round his waist and shoulders to secure

his retreat as well as to effect his descent; and moreover, in their impatience to obtain the object of their research, they flung large stones at the vase, and succeeded in effecting some fissures on its surface; but before they could proceed very far in their operation, the water returned in such abundance, and with such rapidity, that they had scarcely time to draw up the investigator; and, in a very short space of time, the pool was restored to its wonted state, the objects entirely covered, and the stream flowing from it as usual. The water, however, appeared to be tinged with a yellow and thick liquid; and emitted for some days after a strong and fragrant aromatic odour, which they supposed to proceed from the contents of the jar issuing from the openings they had made. The old man's memory did not seem very correct in the details of his marvellous narration; but the principal facts were attested by several other witnesses, who agreed in their account of them."

At Alzana, we read, "After a slight refreshment, examined the antiquities which existed very near our resting-place. These are supposed to point out the site of the town of Suna, mentioned by Dionysius of Halicarnassus, some similarity to which is still preserved in the name of Alzana, now given to the place in question. They consist of three rows of polygon walls, one above another, as at Alla; and a very curious monument exists between the first and second. This is a circular subterranean structure, formed of uncemented stones placed longitudinally, each row gradually projecting above the under one, till they bring it to a pyramidal shape, truncated at top, and closed by two semicircular flat slabs joined together, and having a round opening in the centre, above which another stone is placed which closes it. The entrance into this fabric, which in shape is exactly like a bee-hive, is from one side, at an aperture like a small window, through which the earth which had filled it has been removed: but the interior has not been excavated to a sufficient depth to verify the original height of the building, which, however, does not appear likely to have been considerable, the diameter at the lowest extremity not measuring above six feet. It is supposed by the natives to have been used as a cistern; but its miniature resemblance to the fabric known by the name of the Treasury of Atreus, at Mycenæ, and so ably described by Sir William Gell, in his '*Argolis*,' may point it out as adapted to the same purpose, though it has likewise been looked upon as a granary."

We conclude with a curious notice of the effects of malaria. At Pescara, our traveller states:—

"I found a miserable inn, devoid of the slight necessities which I had hitherto met with, even in places proverbial for such deficiencies. A general scarcity of vegetables, milk, and even fish, wine of the worst quality, and water barely drinkable (the Pescara furnishing the only supply), rendered half a day's sojourn in so dull and gloomy a spot a matter of considerable irksomeness; but the distance to Giulia Nuova, the nearest resting-place, was too great, added to the increased heat of the weather, to allow me to proceed further. The inmates of the inn, chiefly females, were, however, courteous and attentive; a disposition which shone through the languid listlessness which peculiarly marks the habits and manner of all persons who have repeatedly suffered from malaria fevers, in the same degree as the faded remains of a brilliant complexion could still be traced through the clayey

hue imparted by that disease. I had more than once previously remarked the regularity of feature, and cast of expression, which frequently distinguished the populations most exposed, from their local situation, to the ravages of this scourge; and this observation, renewed and corroborated at Pescara, added painfully to the melancholy impression which an intercourse, however transient, with the sufferers, is but too apt to produce."

*An Abridged History of the Principal Treaties of Peace, commencing generally after the Peace of Westphalia, and at an Earlier Period, with reference to the Question of the Neutral Flag protecting the Property of an Enemy.* By Capt. Furneaux, R.N. 8vo. pp. 547. London, 1837. Rodwell.

THE utility of a *coup-d'œil* and collection of this kind is unquestionable. History is so busied with action and events, and action and events attract so strongly the attention of readers, that the less obtrusive, but not less important affairs of the cabinet and closet are hardly observed with the interest due to them. Yet the stroke of a pen often effects more than the triumphs of a campaign, and the forgetfulness of a principle in negotiation not unfrequently causes the sacrifice of all that a successful war has been waged to maintain.

Entertaining these views, we have looked at the volume before us with considerable care, and have to acknowledge the weight of our obligation to it, for separating the deliberative from the active, throughout so wide a field and so monstrous an era, and thus presenting to us a more distinct picture of the former than could readily be comprehended when seen linked with the confused mass of general history. We wish we could extend our praise, and say that we thought as highly of Capt. Furneaux as a commentator as we do of his labours in compilation. But this, in truth, we cannot say; though we are free to acknowledge, that in some of the cases where we differ from him, there may be others who agree with all his conclusions. To us it seems that, on the grand question respecting free bottoms making free goods, he is very correct, and so, perhaps, in his expositions of the more ancient treaties; but when he comes to our own times, his opinions, like his name, appear to be quite of French cast and origin. The R.N. appended throws us off our guard, while we listen to statements and arguments which would flow more fitly from C. I. d'H.: Legion of Honour, not Royal Navy. That these are Capt. Furneaux' honest sentiments we do not entertain a doubt; but that, in certain instances, they have proceeded from want of information, we will select one remarkable example to prove. In 1807, the writer tells us, "The long-contested battle of Friedland was gained by Napoleon against the Emperor Alexander on the 14th of June, after which, the latter, dissatisfied with Great Britain for having taken no active part in the war, for refusing pecuniary supplies and the guarantee of a loan of six millions, accepted the mediation of Austria, which produced the peace of Tilsit." The motives of Alexander are, as we think, misrepresented in this extract; and in describing Mack's surrender at Ulm, p. 276, either Capt. Furneaux or preceding writers are wrong in the account of the numbers who surrendered and of those who forced their way through the enemy; for they differ very materially. But we are, at least, equally staggered by the following assertion in the Preface.

"England has always maintained a right to the supremacy of the British seas from a period

\* "Since writing the above, I perceive that the Count C. de Montalembert, whose researches in the study of the æsthetic poetry of the middle ages render his opinion of great weight, repeats this assertion in his 'Introduction à l'histoire de St. Elisabeth de Hongrie,' page lxxviii; and I regret that the learned author has not thought proper to mention his authority."—*Author*.

long preceding the invasion of Julius Cæsar, whose successors, it may be observed, could never have subdued the country, nor even have effected its partial subjugation, had the Britons been true to their own interests. It is questionable whether the western empire, in its decline, formally absolved the Britons from their allegiance, but it is certain that they recovered their independence, and with it all such rights and royalties as had originally belonged to them, or were subsequently assumed and exercised by the government of Rome."

We will only further, and without contradiction or reasoning on the points at issue, quote a specimen or two from the work under review, to shew the author's manner and inclination.

"The affairs of Naples were taken into early consideration by the congress of Vienna; and, on the 25th of January, 1815, Lord Castlereagh declared that Murat had not performed his engagements with Great Britain, and that, consequently, the disposition of the kingdom of Naples formed a part of the deliberations of the congress. The Emperor of Austria, having served his purpose by the alliance of the 11th of January, accused the King of Naples of duplicity and bad faith, and gradually left him to his fate. Neither Austria nor Great Britain have satisfactorily supported their charges against the king until his correspondence with Napoleon, which was the natural consequence of their desertion of his interests. England, indeed, had ratified no actual treaty with Naples, and was, therefore, not literally obliged to support in their full force the claims of its adventurer sovereign, but was, at least, bound in no way to oppose them; for it was under implication of a treaty of alliance with Great Britain, that Murat had so effectually contributed to the success of the common cause. Austria, on the contrary, was engaged by the treaty of Naples to support its existing dynasty to the utmost of her power, even at the risk of again involving Europe in a war; and it must be very difficult to believe that Murat was the first to violate engagements so clearly favourable to his pretensions. Few men, however weak or wicked, act contrary to their direct and positive interests, and those of the King of Naples were inseparably connected with a strict observance of his alliance with Austria; and the clearness with which the treaty of Naples is expressed is evidence that Murat was not so inefficient in the cabinet as Napoleon and others have represented, or that his ministers were well qualified to support the political interests of their sovereign; for, even after the additional articles had been procured through the intervention of England, there is nothing in the treaty unfavourable to the real interests of the reigning monarch. The pope was not obliged to consent to the alienation of any part of the patrimony of the church, and it certainly could not be supposed that the King of the Sicilies would renounce his rights without a struggle for their recovery. It may be a question of morality how far Austria was obliged to recommence a general war for the preservation of claims originally founded in injustice; although, considering the political situation of France, and the weakness of the other branches of the house of Bourbon, the alternative was not likely to have occurred. The difficulties were, doubtless, great and many in the execution of the treaty of Naples, and Austria had better have avowed them, and endeavoured to pacify the king by the offer of an establishment unconnected with the affairs of Italy. The King of France, by the treaty of Paris, had

made peace and friendship with the allies of Austria, which, as it included Naples, should at least have neutralised the enmity of his most Christian majesty, who, as the avowed champion of legitimacy, pursued the soldier of fortune to the untimely grave to which the King of the Sicilies prudently consigned his regal pretensions. Let the character of Murat be as unprincipled as his enemies have represented it, yet I apprehend that the charge of political perfidy, so bountifully bestowed on his memory as to his conduct in the alliance of Naples, must be transferred from their victim to the cabinets of Vienna, London, and Versailles, but, in the first degree, to Austria."

A yet more important epoch is thus delineated.

"The return of Napoleon appeared to restore unanimity to the congress of Vienna, so far at least as to direct the arms of Europe against him; and on the 13th of March, 1815, those powers who had signed the treaty of Paris declared that Napoleon, in violating the convention which had established him in the island of Elba, had sacrificed the only legal title to which his existence was attached; that in consequence he had placed himself out of all social and civil relations; and that, as an enemy and disturber of the peace of the world, he was devoted to public justice. The allied powers further declare, that they will maintain entire the treaty of Paris of the 30th of May, 1814, and the dispositions sanctioned by that treaty, as well as those which they have decreed, or may decree, to complete and consolidate it; and that they will employ all their means, and unite all their efforts, to preserve the peace of Europe. This declaration was signed by the ministers of Austria, Spain, France, Great Britain, Portugal, Prussia, Russia, and Sweden. There is inconsistency as well as injustice in denouncing Napoleon (who in his imperial capacity was not amenable to the general operations of justice) out of the protection of the laws, on the ground that he had broken the treaty of Fontainebleau, of which it will be generally admitted he was not the original violator; the merit or discredit of which belongs to Austria, Russia, Prussia, and Great Britain, which last had consented to the arrangements respecting Elba and the Italian duchies. It has been asserted, and probably with some foundation in truth, that the allied powers, who felt the impolicy of allowing the ex-emperor to reside so near the scenes of his former greatness, had determined on his removal to a more distant asylum. Such was the declared belief of Napoleon himself, who did not require such excuse for the last acts of his eventful political career, as his enemies had afforded him other and equally plausible reasons for again unabating the sword of deadly contention, which he never could have attempted had not France been generally favourable to its early choice. It has been asserted, that Napoleon should have demanded the full performance of the treaty of Fontainebleau before he undertook to do justice to himself. He might have done so in mere observance of the etiquette of diplomacy; but, as his powerless representations could have had no influence on those who had systematically departed from their engagements, it was more consistent with the dignity and character of the man who, if we except Great Britain and Russia, had seen all Europe crouch before him, to avenge his own wrongs, rather than become a suppliant to those princes who had been the most abject minions of his ill-regulated ambition, and who would have spurned his griev-

ances with the same mean facility with which they would have again become his allies, or his dependent vassals, had policy or expediency dictated a change of sentiments. Napoleon, in the invasion of France, placed his political existence on the hazard of the die: had he gained the battle of Waterloo he might have re-established his dynasty, and, chastened by the salutary lessons of adversity, perhaps have fixed his ambition in the welfare of his country."

We cannot say that we entirely agree either with the morality, the political truth, or the fanciful conjectures of possibilities in the above; but we will conclude with, at least, a not inferior specimen of moral looseness:—

"The perjury of Marshal Ney, which has been so heavily reproached on his memory, may be equally applied to the whole army, and to at least a great portion of the French nation. His vehement protestations of loyalty to the French king may have been offered in sincerity, and were such as most others would have tendered, whatever might have been their ultimate intentions; and, when we consider the various forms of government which have existed in France since the revolution, *an oath more or less adds or detracts but little from moral guilt; and party feeling has made the violation of a solemn engagement as frequently an effort of patriotism and virtue, as of rebellion and irreligion.* If oaths of allegiance are unconditional, every Frenchman, of any consideration and advanced age, must have committed repeated and wilful perjury as well as Marshal Ney and his fellow-sufferers."

And what then? Does community, and extent of guilt, convert crime into virtue? But we return to finish with the more pleasant task of repeating, that there is a vast fund of valuable matter in this volume, which deserves a place in every historical library.

*The Carthusian, No. III.* London, 1837. Walker; Simpkin, Marshall, and Co.; Sherwood and Co.

AFTER a lapse of time, occasioned, we observe, from a smart notice at its conclusion, by some split among the original editorial trio, the third No. of *The Carthusian* has emanated from the Charter House, and the press. We have always commended and encouraged productions of this kind. Nothing can more effectually improve the habits, cultivate the minds, and excite the talents of a public seminary. Education is made a pleasure instead of a task by such employment. The elders do their best, and the juniors look up and forward with the wish to emulate their literary glories. I, too, will write and be printed is a capital stimulus—the hope of authorship is a sweeter delight than ever was authorship itself.

But, independent of the design, the execution of this school periodical is really highly honourable to the writers. The "Auditor's Tale" is a lively and pleasant one; the "Gipsies," a well done poem, founded on Mr. James's admirable novel; the "Modern Lempriere," a good-humoured satire; and a criticism on Lovelace's Poems (Lovelace was a Carthusian), quite worthy of a place in the highest review of the day. If written by a youth, it is, indeed, remarkable for poetical acumen, as well as for general information.

We will select two or three of the quizzical notices from the "Modern Lempriere," in which the jumble of error is ludicrous enough.

"*Bridgewater, Duke of.*—An engineer of obscure birth, and most eccentric habits, but, by his great talents, raised at length to the Bishopric of Bristol. When his great success in canal-surveying caused him to be called to the

House of Peers, he was so little ashamed of his occupation, that he took his title from the subject-matter of his trade. He was a munificent supporter of cruelty to animals, and at his death left eight posthumous treatises to be published by Lord Francis Egerton, which have been wrongly assigned to various authors. A ninth is altogether spurious."

"*Buonaparte*.—Chiefly known as the writer of an epic in twenty-four books. Though a man of some consequence in his day,—for he was successively King of Spain, Naples, Sweden, Rome, France, and Holland,—yet he left behind him little but his literary works. He retired into private life sometime before his death, the date of which is uncertain; but the last time we read of him in history, is in an abortive attempt at an insurrection in the reign of Louis Philippe, King of the French. For further account of him see the *Life of Wellington*."

"*Burke*.—An enlightened philanthropist of the nineteenth century. He was the happy originator and eloquent advocate of a new and capital mode of punishment, which superseded the guillotine in the French revolution. He was remembered for the dignity of his carriage, and his chivalrous attachment to his unfortunate but not less celebrated contemporary, the accomplished but too profligate Hare. The splendour of their characters, and the ardency of their affection, caused the two friends to be named 'the Sublime and Beautiful.' His statue formerly existed in the Tussaud Gallery in the attitude of the orator holding a pitch-plaster over the recumbent figure of Marie Antoinette."

"*Hampden*.—A remarkably bad rider, being continually noticed as having 'fallen in the field.' He resisted the payment of ship-money, and the appointment of select preachers. He was persecuted by the bigotry of the Oxford papists; but having been appointed by the same party Bampton lecturer to the parliamentary army, and vicar of St. Mary's, he, at length, suffered martyrdom for high church principles, being burnt in effigy by the dissenters and nonconformists on the anniversary of the Restoration. See 'Tracts for the Times,' and his *Life by Lord Nugent*."

"*Mackintosh*.—A noted conversationalist and cape-maker. During his residence at Bombay he became acquainted with the virtues of Indian rubber, and on his way home weathered the Cape on very scientific principles."

"*Smith*.—A gentleman of most versatile talents and unbounded acquirements. Baker, banker, brewer, &c. &c. &c., he more than realised the omniscient Greek of Juvenal:

Grammaticus, rhetor, geometres, pictor, aliptes,  
Augur, schenobates, medicus magus; omnia novit.

Some have considered him as altogether an allegorical personage, representing the principle of Panurge, or of Ubiquity. It is more reasonable, however, to suppose that there were two persons of this name, the younger of whom, yclept Sydney, having distinguished himself at the siege of Acre, was afterwards buried with great pomp amid the canons of St. Paul's, and the lamentations of the people."

Another dictionary is not amiss; *ex. gr.*—

"*Cad*, the attendant to an omnibus; *a non cadendo*; as *lucus a non lucendo*, because he never falls; the passengers often do.

"*Tick*, credit, without paying; *τιχως*; because practitioners of this art often get placed 'within four walls.'

"*Lout*, *λῶντες*, *a non lavando*, one of the 'unwashed.'

"*Togger*, clothes; *a togâ*. The word most frequently means flimsy, showy, or fashionable dress; hence *gens togata* may be rendered the *neat mob*."

#### MISCELLANEOUS.

*Universal Mythology: an Account of the most important Mythological Systems, and an Inquiry into their Origin and Connection; with Remarks on the Koran and Talmud.* By the Rev. H. Christmas. Pp. 484. London, 1837. Parker.

This is a very useful and excellent volume. It affords a sufficient view of the mythologies of Egypt, the Hindus, the Budhists, the Chinese, the Greeks, the Mexicans, the Mahomedans, the Scandinavians, and (with greater industry and research) of the Chaldeans and Phœnicians. The section treating of the latter has been supplied by Mr. C. P. Harris of Manchester, and displays great ability. It throws a steady light upon the earliest ages of the human race. The whole is most deserving of general acceptance; and, whether for scholastic instruction, reference, or common reading, we have not for a long time been better satisfied with a work of the sort.

*The Fairy Annual.* Edited by Robin Good-fellow. London, 1837. Robins.

THOUGH a large folio in comparison with Schloss's *Bijou*, this, in other days, would have

been thought a mighty small  *tome*, for its size is that of a small *snuff-box*. Being well stored with pleasant literary matter within, and adorned with pretty cuts, it will serve famously for a *Christmas-box*. The prose and poetry are original as well as selected; among the former, "Lays of the Seasons," by Thomas Miller, are very sprightly and fanciful.

*Substance of a Lecture on Poetic Genius and a Moral Power; delivered 2d October, at the Milton Institution.* To which is added, an Ode, by J. A. Herard, Esq., author of "Oration on Coleridge," &c. &c. Pp. 21. London, 1837. Fraser.

This little pamphlet must be carefully read and much considered to be fully understood. It is abstruse and metaphysical, but presents some admirable views of poetic genius, and does honour to the high intellect of the author. The remarks on Byron, Shelley, and Wordsworth, as well as other poets, are extremely curious. The ode on "Creation" is most mythical.

*The Gospel History of our Lord and Saviour Jesus Christ.* By Lucy Barton. With a Preface, by Bernard Barton. 12mo. pp. 318. London, 1837. Fisher and Co.

THE amiable and intelligent author of this excellent little history has already won the golden opinion of the public by a similar production, on the Old Testament, under the title of "Bible Letters," which received the sincere tribute of our approbation when it appeared, some few years ago. Its present companion is well worthy of a place beside it, for it is clear and pious, recording the great events of our Saviour's life in a simple manner, and yet not disguised by the familiarity and cant of expression, which too often turn the well-disposed, in disgust, from the perusal of such works.

*A History of London, from its Foundation by the Romans, to the Accession of Queen Victoria, &c. &c.* By Charles Mackay. Pp. 496. London, 1837. Parker.

VERY nicely abridged from the massive histories and accounts of London, which are all but inaccessible to the vast majority of readers, Mr. Mackay has here performed a very useful and acceptable task, in a very satisfactory manner. The volume is extremely entertaining, and deserves to be in every hand, but especially recommends itself to the inhabitants of the metropolis.

*The Veteran; or, Forty Years in the British Service: comprising Adventures in Egypt, Spain, Belgium, Holland, and Prussia.* By Captain John Harley, late Paymaster of the 47th Regiment. 2 vols.

PUBLISHED for the benefit of the author's widow; who, we fear, from the conclusion of the narrative, has been left in circumstances that must make us wish the volume more entertaining than it is. All we shall say of *The Veteran* is, that there is a constant succession of Irish stories and anecdotes, and some curious particulars of campaigning in the various countries nominated on the title-page. From the earlier statements, the military reader will see what immense improvements have been made in the army since forty years ago; and the general reader will find amusement in the tales and traits of some eccentric and other characters, not unknown to the public.

*The Encyclopædia Britannica (7th edition), Vol. XVI. Part I.* London, 1837.

THIS part is remarkable for a clear view of *Inland Navigation* throughout the civilised world, and a more detailed notice of that of our own country. Under the word *Navy*, there is also a good paper; but one upon *Optics*, though

not concluded in this part, is yet more worthy of particular attention.

*Henry Masterton; or, the Adventures of a Young Cavalier.* By the Author of "Darnley," "Attila," &c. London, 1837. Bentley.

To get a novel of Mr. James's in the shape of a single volume (and this is No. 61 of Bentley's "Standard Novels"), is a mighty temptation; and we need hardly add to it by noticing, that this is revised and corrected by the author, and adorned by a very characteristic frontispiece, and a pretty vignette by Cawse.

*A Visit to the British Museum, &c.* Pp. 304. (London, Chapman and Hall).—A familiar and useful guide, with many illustrations, to the chief objects of interest in this national collection. It is not only good for its purpose as a guide, but good for recalling what has been seen to memory, and even good to read for information by those who have not visited the Museum.

*Irish Collegiate Architecture, &c.* by Henry Fulton. Pp. 24. (Dublin).—A severe censure upon various functionaries connected with the Dublin University, and sent to us with an intimation that its freedom of discussion had precluded it from notice where its local application was strongest. We fear that we could at no time have excited interest on this side of the water, by entering into the dispute; but, at any rate, the death of one of the principals assailed must close our mouth and un-ink our pen.

*The Rambles of Captain Butto.* Parts I. and II. (London, Strange).—This is one among the many imitations of the immortal Pickwick pleasantness. It has some humour, and contains a few amusing incidents. It, moreover, possesses one merit (no small one in our eyes) over many of its competitors—it offers nothing whatever offensive to delicacy. The etchings are dull enough.

*Outlines of Naval Routine,* by W. A. D. Fordyce, R.N. 8vo. pp. 230. (London, Smith, Elder, and Co.; Edinburgh, Lindsay and Co.; Aberdeen, A. Browne and Co.)—Every thing that a seaman can want in the way of information—a *vade-mecum* complete.

*Le Bijou Littéraire, ou Anecdotes Historiques, &c., par C. V. Martin.* Pp. 300. (A Londres, Simpkin and Marshall; Birmingham, Osbornes).—A very pleasant selection from French authors of repute, both "proseurs" (we wish we had one word for them in the English language, say *proseurs*, instead of the compound prose-writers) and poets.

*Bible Quadrupeds: the Natural History of the Animals mentioned in Scripture.* Pp. 271. (London, Tilt).—With sixteen nice pictures, of the most prominent subjects, by S. Williams. This is an excellent little tome for young people; cherishing at the same time a love for the holy volume, and a taste for natural history.

*Morals from the Churchyard, in a Series of Cheerful Fables.* With Illustrations by H. K. Browne. Pp. 120. (London, Chapman and Hall).—A series of well-meant allegories.

*The Library of Entertaining Knowledge. Davis's China, Vol. I.* (London, C. Knight).—No work could be more worthy of selection for republication in this form, than Mr. Davis's well-known and highly appreciated description of the Chinese empire and its inhabitants. So curious a people cannot be made too well known to every class of readers.

*Notes of the Young.* Pp. 214. (London, Smith, Elder, and Co.; Simpkin, Marshall, and Co.).—There is much of sensible remark and valuable precept in this little volume, which seems chiefly to be drawn from preceding writers of acknowledged worth.

*The History of Parity,* by G. Winford Cooke, Esq. Barrister-at-Law. Vol. III. 8vo. pp. 628. (London, Macrone, deceased).—From the year 1762 to 1832, and, consequently, including the Reform Bill, this volume is the most immediately interesting of Mr. Cooke's labours. The nature of the subjects and the rules on which the *Literary Gazette* has been conducted, confine us to the opinion that it displays much ability and offers general views of important matters in a way well worthy of public attention.

*Critica Nova Zealandica Futura, &c.* Pp. 55. (Cambridge, Grant; London, Chapman and Hall).—*Cambridge Crepuscular Conversations.* Pp. 31. (Cambridge, Hall; Hankin).—The first of these *jeux* is a pseudo New Zealand critique on the melodrama of "Mother Hubbard," and supposed to be written in A.D. 3211, the present copy being only the British autograph. There are a good many puns and jests not unworthy of the classic humour of the University. Lord Byron's line on a skull, "yet this was once ambition's airy hall," it is clearly demonstrated should be read "airy hall;" and Mother Hubbard's doggie smoking a pipe leads to a note on the antiquity of smoking, illustrated from Dryden.

"Aventinus drives his chariot round;  
Proud of his steeds, he smokes along the field."

And a number of other equally apt references. The second production does not strike us as being quite new.

*The British Medical Almanack, 1838, with a Supplement,* edited by William Farr. (London, Churchill).—This is a most useful publication; no medical practitioner can be without it. Every information respecting hospitals, schools, colleges, boards, &c., in London and throughout the kingdom is distinctly given; and, in other respects,

there is a good almanack and recent intelligence of much professional value.

*Selections from the Bostan of Sadi*, by Forbes Falconer, M.A. Member of the Asiatic Society of Paris, and Professor of Oriental Languages, University College, London. Pp. 107. (London, Straker.)—It is with much pleasure we notice this attempt to facilitate the study of the Persian language. To the student of this language, it is needless for us to announce that text-books are dear and often difficult of acquisition; and quite as needless to enlarge on the advantages of a beautifully executed selection from a work of acknowledged and standard merit, published at a price hardly ever affixed to an oriental work before. The *Bostan* is well fitted for a text-book from the beauty, interest, and simplicity of its narratives; the latter no small praise in a language where sound often hopelessly runs away with sense. Sadi's works, on the contrary, are generally elegant, in good taste, and devoid of meretricious ornament. The work under consideration is composed entirely of tales, all in verse.—There are between seventy and eighty of them, and they form about a third of the whole *Bostan*. Of this work there is no English translation. One was advertised by the Oriental Translation fund, but, in consequence of the death of Mr. Ross, the translator, never appeared. It is no small recommendation of this volume, that it is lithographed in a style of writing usual in Persian MSS. The student of Persian and Arabic has, generally, to deal chiefly with MSS.; and the mere difficulty of deciphering some of these is a very serious addition to the labour of the reader: hence it is of great importance early to familiarise the eye with the written character. The whole, as we happen to know, was written by the hand of the compiler.

#### ORIGINAL CORRESPONDENCE.

##### POLAR EXPEDITIONS.

To the Editor of the *Literary Gazette*.

December 9th, 1837.

SIR,—The attention of the public having been so recently directed towards the expeditions of Captain Back, and other enterprising navigators, appears to render any account of the views formerly entertained on the subject of the north-west passage, and of the instructions given to our early voyagers relative to these parts, particularly interesting at the present moment, as affording in many respects a remarkable contrast to the more enlarged views and liberal principles on which these expeditions are at present conducted. Prompted by these feelings, I have been induced to offer to your *Gazette* the following instructions given by Queen Elizabeth to Sir Martin Frobisher, about the year 1577, contained in a paper communicated some time since to the Antiquarian Society, by Sir H. Ellis.—Yours, &c., G. M.

"Instructions given to our loving friend, Master Farbusier, gentleman, for orders to be observed in the Viag now recommended to him for the north-west parts and Catain.

1. First, you shall enter as capitaine generall into the chardge and governement of theis three vessells, viz. the Ayde, the Gabriell, and the Michell, with all that appertaineth to them whatsoever.

2. Item: you shall appointe for the furnishing of the said vessells the number of cxx. persons, whereof lxxxx. shall be mariners, gunners, carpenters, and other necessarie men to serve for the use of the shippes, and the other xxx. to be mynners, synners, merchants, and other necessarie persons both (to) wayt and attend upon you, which numbers you shall not in any wise exceede.

3. Item: the victuals for vij. monethes, which is delivered into the said shippes for the provision of the aforesaid persons, you shall carefullie see the same expended and preserved without spoile or hurte taking by negligence.

4. Item: you shall not receive into your companie any disordered person as neere as you may, and upon knowledg had, to remove him.

5. Item: you shall use all diligence possible to departe with your said vessells from hence before the xxth of this present moneth, and to take your course either by the north or the west, as the winde will best serve you.

6. Item: in your waie outward you shall (yf yt be noe hindrance to your viadg) set on land

upon the coast of Freezeland, vj of the condemned persons which you carrie with you, with weapons and victuals, such as you may conveniently spare. And yf yt cannot be done outward, you shall doe your indevor to accomplish the same in your returne. To which persons you shall geve instructions howe they may, by their good behaviour, wyne the good will of the people of that land and countrie, and also to learne the estate of the same; and yf you set them a land in your going outwards, then doe your best to speake with them in your returne.

7. Item: when you shall be past the lands of England, Scotland, and Ireland, you shall directe your course with all your vessells to the island called Hall's Island, being in the entrance of the supposed straight which we name Farbusier's straight, discovered by yourself this last yeare, in your journey thitherwards. You shall have a speciall regarde, so to order the matter as your vessells doe not loose the companie the one from the thother. And yf any wilfulnes or negligence shall appeare in any person or persons that shall have chardge (or otherwise) in doing of the contrarie, then you shall sharpelie punish the same to the example of the rest.

8. Item: at your arrivall at Halles Island, you shall seeke good harborrowe for the shippes as neere the same island as may be, and there to place your shippes in safetie. And from thence you shall repaire with such vessells and furniture as is apte to the place where the mynnerall oore which was had, and which you brought hether the last yeare, and there to place the myners and other men to worke and gather the oores; foreseeing as thei may be placed as well from the danger and malice of the people, as from any other extreamitie that may happen.

9. Item: when you have placed your mynners and other persons, as before is said, you shall then embarke your self in one of the smaller barkes, and take the other barke also with you, leaving the Ayde behind you in the chardge of some discrete person, as well to receive and lade the oores which shall be gotten, as also to reserve the workmen; with the which two barkes you shall repaire towards the place where your men and boate was taken from you, and in the way going you shall make search both for good harborrowes and also for other mynnes. And if upon proof you shall find mynes to be richer than those from whence you came, then you shall returne to the first worke and receive the myners, and shipp to those other mynes, as you shall see cause; and the workmen being once well settled, then you with the barkes shall, for the searching out of your owne lost, and also to discover l. or c. leagues westward from that place, as you may be certaine that you are entred into the South Sea, and in your passage to learne all that you can: and not to tarry so long from the Ayde and workmen, but that you be able to returne northwardes with the shippes in due tyme.

10. Item: to consider what places be most apte to make fortifications, if neede require, for the defence of the myners and possessing of the countrie, and to bring perfit plots and notes therof.

11. Item: yf yt shall happen that the mynes doe not yeld the substance that is hoped for, then you shall furnish the two barkes with such as you may take out of the Ayde, and therewith all you shall proceede towards the discovering of Catain, with the two barkes for England againe.

12. Item: yf yt be possible, you shall leave some persons to winter in the straight, geving them instructions how they may observe the nature of the ayre and state of the countrie, and what tyme of the yeare the straight is most from yce; with whom you shall leave a sufficient preparation of victuals and weapons, and also a pyynas with a carpenter and thyngs necessarie so well as may be.

13. Item: you shall mistruste rather to much then any thing to little touching the matter of your safetie when you happen to come to have conference with the people of those parts where you shall arrive: so, againe, we require you that, in all your doings, you doe so behave yourself (and so cause your companie to doe the like) towards the said people as may geve least cause of offence, and to procure as much as in you shall lye to wyne both friendship and liking.

14. Item: yf you finde that the oore be of that qualitie and quantitie that is looked for, that then you do procure to lade so much therof in all your shippings as may be, although you doe leave out other superfluous things.

15. Item: you shall make your returne homeward by the west parte of Ireland, and so by the narrow seas of England to London, for that we doe take the same to be your safest course, because we doe not know what other matters may happen to you in the tyme of your journey; and, therefore, cannot prescribe what is to be done for your relief in a case. We doe, therefore, referre the consideration therof to your good discretion, not doubting but that the order which you take therein shall be agreeable with the good expectation that is conceived of you.

16. Item: we doe not thinke yt good you should bring hither above the number of three, or fewer at the most, of the people of that country, whereof some to be old and the other yonge, whom we minde shall not return againe thether. And, therefore, you shall have great care how you do take them for avoiding of offence towards them and the countrie."

#### FINE ARTS.

##### NEW PUBLICATIONS.

*The Book of the Cartoons.* By the Rev. R. Cattermole, B.D. The engravings by Warren. 8vo. pp. 185. London, 1837. Rickey.

THIS is an elegant volume, and must be an acceptable present to all young persons who are cultivating a taste for the fine arts. It commences with a slight sketch of the Life of Raffaele (to which is prefixed a very sweet head); and then proceeds with a detailed examination of the seven cartoons which adorn Hampton Court. Much as has already been said on the subject, Mr. Cattermole has invested it with a new interest by the tone in which he has treated it:—

"Himself (he observes) of the very opposite temper to that which is 'nothing if not critical,' he has, from mental habit, as well as from a wish to do justice both to his readers and his subject, endeavoured rather to assist the student of the Cartoons to admire and love the wonderful excellences of these works, by leading him to contemplate them from the same point of view as they were seen from by their illustrious author, than, by adopting the contrary method, to point out minute imperfections, and dwell on trifling inaccuracies; rather to implant the living principle of enjoyment and profitable delight, than to confirm the sterile faculty of coldly judging."

To one passage of Mr. Cattermole's book we

wish we could effectively call the attention of those who possess the power of carrying into effect that gentleman's recommendations. After observing that, "on rising from the contemplation of such a work as the Cartoon of 'The Charge to Peter,' it is impossible not to retain a strong impression on the affirmative side, respecting the question, whether pictures are, or are not, of any use in promoting morality and religion?" he says, "if it be true—as true indeed it is—that books

'Are a substantial world both pure and good,'

in which, rapt away from all that fevers and degrades us in the world we have to strive with outwardly, we may inform, raise, and delight the wearied spirit; so are pictures, of the highest class, a world also, of a no less absorbing charm and sanctifying tendency. In the church of Rome they are regarded as the books of the unlearned; and that church in all things 'wise as the serpent,' but not 'harmless,' has used them as such—partly, it is to be lamented, for evil, partly for good; for she has made them the instruments of superstition as well as the teachers of truth. But, why should the Church of England disdain, in this as in other things, to secure the use while she discards the abuse? Why may we not hope that, among the real improvements for which the way is being prepared by mighty contention and many illusive shadows of such, we shall hereafter, on entering the multiplying fanes of her pure worship, instead of finding our eyes repulsed by the sight of bare walls, have our minds enriched through that avenue with the ever-living ideas presented by the Bible, embodied in glowing forms, if not by Da Vinci, Raffaele, and Corregio, yet by artists whose hands enlightened patronage, an equally earnest purpose, and a purer faith, may teach almost as divine a 'cunning'?"

We must protest against the too frequent practice of engravers not to reverse pictures on their plates; the consequence of which is (as every tyrn knows), that the prints are reversed. In some few cases, although rarely, this may be unimportant, but in many it is productive of great absurdities—right hands becoming left, &c. For instance, in the "Paul and Barnabas at Lystra," Mr. Cattermole's description of the manner in which the sacrificer holds the axe is completely falsified by the plate. With the exception of the defect to which we have alluded, Mr. Warren has executed these little plates with great accuracy and beauty.

*Outlines of a Plan for the National Encouragement of Historical Painting in the United Kingdom. Originally addressed in 1809 to the Directors of the British Institution, and now respectfully submitted to the Consideration of Lord John Russell, Her Majesty's principal Secretary of State for the Home Department.* By Sir Martin Archer Shee, President of the Royal Academy, F.R.S. 8vo. pp. 90. London, 1837. Ridgway and Sons.

To his reputation as an artist, a scholar, and a gentleman, Sir Martin Shee has always added the merit of an enlightened, generous, and disinterested zeal in the cause of the higher branches of that profession of which he is so distinguished an ornament. We use the word "disinterested," because it is well known that, although no one can doubt that he possesses powers which might originally have been employed with success in a nobler sphere of art, Sir Martin has devoted himself exclusively to portrait painting; and because we are satisfied that, even in the event of any national encouragement being suddenly and unexpectedly af-

forded to historical painting, he has too much judgment to think, at his time of life, of commencing a new and arduous career; and of entering into competition with men, either in the enjoyment of youth and vigour, or whose studies have been long directed to historical composition.

The great object which Sir Martin has in view is to shew the fallacy of the opinion which is unhappily too prevalent, that the spirit of public encouragement in this country is the legitimate resource upon which our arts should depend for cultivation and perfection. He observes that patronage may be said to be of two kinds; that of the public, as exercised by individuals, and that of the nation, as administered by its government: and he maintains that the institution of national prizes and public honours would prove the only effectual mode of calling forth the genius of our painters, and cultivating the taste of the country. The detail of the means which Sir Martin Shee proposes for the accomplishment of this great end has been too long before the public to render it necessary for us to do more than to recommend such of our readers as are interested in the subject, and who are not familiar with the plan, to procure a copy of it without delay. We cannot, however, deny ourselves the pleasure of transcribing the admirable letter with which Sir Martin introduces the plan to the notice of the noble secretary of state for the home department:—

"To the Right Hon. Lord John Russell, M.P., &c. &c."

"My Lord,—The following Letter was written, as your lordship will perceive, in the year 1809. It originated in a conversation with the late Sir Thomas Bernard and the late Sir George Beaumont, two of the directors of the British Institution, in which I took the liberty of throwing out some suggestions for rendering more effective the operations of that society. Having been assured by those gentlemen that there was nothing which the directors desired more than that some specific plan for the encouragement of the Arts should be offered for their consideration, I addressed to that body the plan which your lordship will find developed in the following pages. A proposition founded upon it was, I believe, submitted to the then prime minister, Mr. Percival. That gentleman, however, as I was informed at the time, after a considerable delay, declined to take any proceeding on the subject, as he did not consider the object in view of sufficient importance to justify the expense required for its attainment. At the period to which I refer, the country was exhausted by a long and burdensome war; the public mind was engrossed by subjects of the most overwhelming interest, and the Fine Arts had obtained so little general consideration, that no attention could be excited to any topic which related to their concerns, or was connected with their promotion. At present, the aspect of affairs is fortunately changed. The nation is now at peace, and its interests are, I trust, generally prosperous. The Arts, also, are more justly appreciated; their influence as effective agents of moral and intellectual refinement is universally acknowledged, and the policy of providing for their cultivation recommended by every enlightened class of the community. Under these circumstances, it seems not unreasonable to suppose that a project directed to that end may now be listened to with more favour, and perhaps attended with more effect. Impressed with these ideas, and under the influence of revived hopes, some of my brother artists have strongly urged upon me the expediency of again attempting to draw the public attention to the following Letter; con-

ceiving that the suggestions which it contains are not less applicable, at the present day, to the state of the Fine Arts, than they were at the period of its original publication, while the remoteness of that period renders it more than probable that the plan in question may have wholly escaped the notice of those on whose liberal character and official influence the interests of taste must now in a great measure depend for that protection of which they stand so much in need. In again offering my proposition to the notice of the public, I confess I am far from being confident of its merits, or sanguine as to its reception. But it is said (according to a favourite argument employed in cases of this sort), that if it should do no good, it can do not harm. It is alleged also, that the time appears propitious for the consideration of such a subject; that the readiness with which large sums have been voted for the purchase of works for the National Collection, decidedly proves that the government and the parliament are influenced by no niggardly spirit in such matters, and that an expenditure for the more direct promotion of the Arts would meet with no illiberal opposition from any quarter. I trust this is a correct estimate of the general feeling. To ascertain what the genius of our country might be able to effect under the application of a proper stimulus, appears to be worth a trial; and the experiment, even if unsuccessful, would reflect credit on any government. If my particular views of the subject are erroneous, they may be corrected by wiser counsels, which your lordship cannot fail to find within your reach; if I am officious, your liberality will discover in my position some palliation of the offence. But whatever may be the result, the same motive which has urged me forward on former occasions, will not allow me now to recede from the adoption of any measure which offers even a possibility of advantage to my profession, and which can be suggested as not only my justification but my duty. Allow me, therefore, to lay the following pages, most respectfully, before your lordship, as a nobleman avowedly desirous for the advancement of the Fine Arts, and as a minister of state, with whose department their interests may be said to be more particularly connected.—I have the honour, &c.

"MARTIN ARCHER SHEE.

"Cavendish Square, Sept. 21, 1837."

We trust that this address may have the effect which we are sure it ought to have; for we claim to be ranked in that class of persons "who respect the Arts from a conviction of their importance, as well as a sense of their attractions; who know them to be as useful as they are ornamental; who are enlightened enough to see how far their moral transcend their mechanical effects; that they are as conducive to virtue and happiness, as to splendour and power, and not more essential to the present reputation, than to the future fame of their country."

*Portraits of the Brood Mares of the Royal Stud at Hampton Court.* Parts I. and II. Sams.

DELUGED as the public have long been with all kinds of pictures of the horse, the work before us may be safely pronounced as unique; representing a series of portraits of the most interesting animals,—interesting from their own value and intrinsic beauty, as well as from their having been the property of the King of England. Almost all pictures that have appeared of horses have been delineated from that noble animal when in a state of high condition in the stable; but in the present collection of portraits of brood-mares of the Hampton Court stud, we see them taken in their

natural state, of the advantages of which, for the purpose of pictorial representation, the artist has fully availed. The two Parts contain the portraits of twelve very celebrated mares, all drawn on stone by the artist; so that they possess a truth and correctness of drawing seldom to be met with in the works of able artists when they have gone through the mechanical process of being copied by an engraver. It is, indeed, one great advantage in the lithographic art, that the painter himself can draw upon the stone, and thus the prints possess all the characters of original drawings.

Looking over the portraits, we were particularly struck with that of the celebrated mare "Nanine," sold for 900 guineas at the public sale of the royal stud; and it is impossible to behold the "lop-eared" mare "Galatea," without finding oneself along with her in the paddock. "Fleur-de-Lis," a mare for which George the Fourth is said to have given twelve hundred guineas; and, also, "Maria," so much famed for her beauty and elegant form, and one of the Arab mares, which were presented to William the Fourth by the Imam of Muscat, are all excellent specimens of art, and exhibit a delicacy in the use of the pencil, as well as of sentiment, which will recommend the work as much to the lovers of art as to the admirers of the most noble of our domestic animals. We believe that the public is indebted to a young lady, Miss Wardrop, for these correct and spirited portraits.

*Richly Illuminated Programme of the Opening of King's College, London.* Written and presented to the Council by William Allsup, Second Arithmetical Master in King's College. Engraved under the superintendence of H. D. Smith. Moon.

ALTHOUGH we detest what is commonly called "fine writing," we are great admirers of the art of calligraphy; and a more beautiful specimen of that art than this performance of Mr. Allsup never came under our notice. The publisher's technical description by no means exaggerates its merits in saying, "The *coup d'œil* is highly imposing; the disposition and subordination of the various parts, the graceful undulation of light and shade, exhibit a perfect mastery of the caligraphic art. In the boldness and elegance of his style, and in the arrangement and variety of his emphasis, the author will strongly remind the connoisseur of the best works of Tomkins." The blazonry, by Messrs. Bishop and Tait, is also admirably executed; and the whole forms a superb decorative print.

*Monument decreed to the Emperor Napoleon the Great, by the Expeditionary Army (4th Corps of the Grand Army) and the Imperial Flotille, assembled at Boulogne for the Invasion of England, 23d Sept. 1804.* Lithographed by A. Picken, from a Drawing (after the original design) by W. P. Newenham, Esq., Lieut. R.N. F. Graves and Co.

THE sight of this print reminded us of Burns's stirring stanza.

"Does haughty Gaul invasion threat?  
Then let the loons beware, sir,  
There's wooden walls upon our seas,  
And volunteers on shore, sir.  
The Nith shall run to Corsincon,  
And Criffel sink in Solway,  
Ere we permit a foreign foe  
On British ground to rally!"

We confess our surprise that the good people of Boulogne have not long ago demolished a structure absurdly erected in anticipation of an impossible event.

*Sketches in Spain.* By George Vivian, Esq.; Lithographed by Louis Haghe and P. Gauci, No. III. Colnaghi and Co.

As picturesque and as pleasingly executed as the preceding Numbers.

#### LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

*Monday.*—Entomological, 8; Phrenological, 8.  
*Tuesday.*—Architectural, 8.  
*Wednesday.*—Zoological, 9; Society of Arts, 7.  
*Thursday.*—Zoological, 3; British Architects, 8; Islington Literary, 4, (the President on Component parts of Air and Water, and on the 11th.)  
*Friday.*—Jalington Monthly Literary Meeting.  
*Saturday.*—Royal Asiatic, 2; Harvelan, 8; Western Medical, 8; Electrical, 7.

#### BIOGRAPHY.

MR. ANGUS.

THIS gentleman, for upwards of thirty years accountant and treasurer in the house of Messrs. Longman and Co., finished his faithful services on the morning of yesterday. He died at Greenwich after an illness of several months. Mr. Angus was so generally known to the literary world, and so much esteemed by all who knew him, that we cannot but consider this brief tribute to his memory very appropriate in the *Literary Gazette*.

#### DRAMA.

*Covent Garden.*—A legitimate pantomime, fairly sustained by *Harlequin*, *Columbine*, *Clown*, and *Pantaloon*, has been produced, and most successfully, at Covent Garden, and, though Mr. Macready has already achieved much in the good cause, a real harlequinade at Christmas was wanting to crown his efforts. This he has now added, and *Harlequin* and *Peeping Tom of Coventry*, in scenery, decorations, *et id genus omne*, will be welcomed by all the holiday folks, children, and children of a larger growth, as one of the best pantomimes they have seen for many a day. At this season, our notice should be confined to the production of the night, but the endeavour to command attention from a Christmas audience, deserves honourable mention. *Jane Shore* was cast in such a manner, that, though the gods, and some in the inferior regions, were extremely riotous, and made much of the play a mere dumb show, yet much more was listened to most attentively, and great applause followed the fine acting of Mr. Macready and Miss Faucit in the parts of *Hastings* and *Jane Shore*. To expect a boxing-night audience to preserve perfect order would be useless, and though Mr. Macready only partially succeeded, yet even that is doing a great deal. The house was crowded in all parts, and, after a good overture by Blewitt, the harlequinade fairly commenced; it opens in the fields of Fungi, with a distant view of Coventry by moonlight, where the witch of Warwick is propitiated by the people to aid them in their endeavour to get the Earl of Mercia to "repeal all taxes;" she desires them to prepare a petition, and, aided by Tom the Cooper, to present it to the Earl. This is done while he is at dinner at his castle of Berkhamstead, a beautiful scene, rendered highly amusing by the grotesquely masked army of the Earl. Every body knows the condition on which the petition is to be granted, namely, that the Lady Godiva ride in a state of nudity through the streets of Coventry. This the lady at once agrees to, and a proclamation is made, forbidding any one to peep, on pain of death. Mr. Bedford sings a capital song, in form of proclamation, with a *bell obli-gato* and chorus; it is very humorous, and was

much applauded. *Tom's* prying propensities lead him to peep; at which piece of natural, but impertinent, curiosity, he is caught by the *Witch* and the *Earl*. The latter insisting on his forfeit life, he is changed by the former into *Harlequin*; a *Columbine* is found for him in the daughter of the *Mayor*, who himself forms the *Pantaloon*; and the *Earl* is changed into *Clown*. Their fun begins, and the *Witch* disappears. Come we to the actors. The *Earl of Mercia* was made most laughable in the hands (legs and body included) of Mr. W. H. Payne, who drew down frequent applause. The *Harlequin*, Mr. C. J. Smith, is a very humorous actor, and a very tolerable *Harlequin*. Miss Fairbrother would make a better *Columbine*, if she would have more liveliness; she is a pretty dancer. The *Clown*, Mr. Jefferini, is very strong, and very comic, but talks "too much." Mr. F. Clarke is equal to the average run of *Pantaloons*. The scenery is very gorgeous, and beautifully painted. We prefer Berkhamstead Castle, already noticed, and the Old Cross and Market Place of Coventry. The distance, in the opening scene, is also very good. The tricks and changes are numerous and excellent: some new, some old; among them we would notice "The Office of the Mirror of Parliament;" the shutters being magically withdrawn, a quantity of weather-cocks (Whig and Tory) are seen whirling round in all directions; and the World Inn, the changes, three or four in number in this scene, were very amusing, and exceedingly well managed. We have now nearly finished our notice, having arrived at the last scene. The interior of Guildhall, with the guests at the late city banquet, which was admirably transformed into the procession, with the Queen in her state coach, surrounded by the Life Guards on horseback, and cheered by her delighted subjects. This was a capital conclusion; and, to any one who did not see the real thing, it will give an adequate idea of the gorgeous spectacle of November. The only part that remains unnoticed is Mr. Stanfield's last work in scene-painting, namely, a diorama, consisting of scenes at home and abroad. It is a series of views, or rather pictures; for, though we have seen many splendid works of this kind of late years, we never witnessed any thing so perfectly beautiful as this diorama. Where all is so excellent, it is difficult to give a preference: we will, however, point out parts that excited general admiration. Lecco and the Adda, a Milanese scene, was a complete picture, as were the Col de Bon Homme, by moonlight, and Huy on the Meuse. The effect of the last scene was greatly heightened by the introduction of a regiment, which marched! in excellent order, over the bridge. The final scene was the British Channel, in which a line-of-battle ship was made to perform the manoeuvre of tacking: it was one of the very best deceptions we ever saw, and drew forth shouts of applause, which lasted for a considerable time. The whole is the greatest triumph of scenic art ever seen on the stage, and in itself alone, sufficient attraction for any night, at any theatre. Our task is ended, and we can only add, how much pleasure we have in having to find fault with so little. No expense seems to have been spared in the getting up; and *Peeping Tom of Coventry* will be more popular in this form, than it was in Kenney's capital farce. The house, indeed, has been crammed every night. Mr. Leffler filled Mr. H. Phillips's part, the

\* This is the great fault of clowns of the present day: Grimaldi rarely spoke.

*Count de Treinar*, in *Amilie*, for the first time on Wednesday. He appears to have given much care to the study of the music, and was completely successful, eliciting several encores, and a great deal of well-merited applause.

*Drury Lane*.—The pantomime here, of *Harlequin and Jack o' Lantern*, is clever and successful; chiefly owing to the capital acting of the principal characters, as well as the appropriateness and beauty of the scenery. Wieland is an inimitable pantomimist; but *Harlequin*, *Columbine*, *Clown*, and *Pantaloön*, are all full of bustle, smartness, and activity.

The *Haymarket* hashed up *Whittington and his Cat*, seasoned it with an old ballad by Mrs. Waylett, and a few crackers by way of garnishing. As it was not intended to last more than a few nights, it does not call for criticism; and now Power has gone for a fortnight to the theatre, it can do well enough without other attractions.

*Adelphi*.—After the exhibition of some new and pretty scenery—giants, dwarfs, distress (in spite of golden guineas), rescues, and so on, "Now the story is begun"—the fun of *Harlequin*, *Columbine*, *Clown*, and *Pantaloön*, commences, and goes on for an hour or so with much spirit. It is a regular pantomime—*Harlequin* and *Columbine* dancing and running—*Clown* and *Pantaloön* stealing, fighting, and getting into and out of scrapes—basket-women, eggs, fish, &c. &c., reeling about the stage in beautiful confusion—and one or two good changes. Of the latter, a gin-palace becoming a gaol so quickly is rather a serious affair. Registrar marriages is a capital hit; and a white child turned black creates shouts of laughter.

*St. James's*.—A burletta, called *Pascal Bruno*, and founded on the novel of that name, was produced here pro-pantomime; and, with the most brilliant performance of Mrs. Stirling, and the humour of Mr. Wright, went off with *éclat*.

The *Olympic* novelty is founded on the famous nursery-tale of *Puss in Boots*, which has afforded C. Mathews an opportunity of following the *mews* in a new range; and he got through it most amusingly. Madame Vestris sings some capital parodies; and Brougham, as an Irish ogre, surpassed any thing he has yet done. The scenery, dresses, and machinery, are all excellent; and the dialogue, which is the joint production of C. Dance and Planché, is what might be expected from such experienced hands. The burletta has, in consequence, gone off each night with increased *éclat*. Houses crowded to overflowing, and vehement applause from delighted audiences, have rewarded the fair lessee's exertions during the week.

*Opera Buffa: Scaramuccia*.—On Saturday, the favourite opera of last season was revived. We had also one or two of the performances of last year. Catone has not so much to do *solo* as generally falls to his share; but his sweet tones enrich the concerted pieces throughout the opera. The *Scaramuccia* of Sig. F. Lablache is a capital piece of acting—in one or two parts closely resembling his father, both in manner and in tone of voice. His leading the orchestra with an immense white stick was most laughable. Sig. L. Bellini played *Tomaso* with much humour—a little too boisterous perhaps, but his constant attention to by-play and his spirit, not only renders his own part prominent, but materially assists those who may be acting with him. The lively, coquetish *Sandrina* was played by Madame Scheroni, who made her first appearance in England. Possessing a pretty, fairylike person, a pleasant,

slightly affected manner, and not a little comic talent, this lady is an agreeable addition to the company. Truth, however, compels us to admit, we do not think her voice is above mediocrity, and now and then she sings out of tune. These defects are partly covered by her very fair execution, lively acting, and taking manner. Miss F. Wyndham's pure and rich contralto voice is heard to advantage in a small theatre; though, even here, some of her sweetest notes are quite lost in the more remote parts of the house. Madame Bellini and Signor Sanquirico did justice to the slight parts entrusted to them.\*

#### VARIETIES.

*Captain Burnes*.—The "Bombay Courier" of the 9th of August, contains the most recent accounts from Capt. Burnes, in Upper India. Our intelligent and gallant countryman states, that he has found the latitude and longitude of many places to be very erroneously laid down in our charts. He was near the seat of war between the Sheiks and Afghans, and using his best endeavour to bring about a pacification between Runjeet Singe and Dust Mahommed Khan; but the parties were much exasperated against each other, in consequence of a sanguinary attack upon Runjeit's troops, at Peshawar. Of the navigation of the Indus, Capt. Burnes speaks rather favourably; but the condition of the natives upon its banks is likely to create considerable obstacles to commerce. Capt. Burnes had reached close upon the salt range, in a vessel of 80 tons burden, without interruption; and the only part of the river which has a regular inundation, is above Chittur, where strong southerly winds prevail, insomuch, that the voyage from Chittur to Deru Ismael Khan was made in seventeen days. Every thing useful and beneficial may be looked for from the enterprise and abilities of our brave friend.

*Exeter Hall*.—On the 22d, the performance of Handel's "Messiah," by the Sacred Harmonic Society, attracted an immense crowd. The magnificent choruses and exquisite solos are known and appreciated by all lovers of sacred music. Of course, we have only to speak of the execution, which was most creditable—five hundred performers swelled the choruses; and in the "Hallelujah!" the audience standing, as well as the vocalists, the effect was truly fine; the dreadful heat and crowd obliged us to leave after the second part.

*The Electors* to the Seatonian prize, in announcing the subject for the present year, also gave notice, "that if any poem shall appear to possess distinguished merit, a premium of 100l. will be adjudged."—*Cambridge Chronicle*.

*University of Durham*.—The prize for the essay "On the Existence of a Moral Sense," is assigned to Dr. Cundells. Mr. Raymond's prize for the essay by an under-graduate, "The Character of the Historical Narrative of Herodotus contrasted with that of Thucydides," is assigned to H. R. Watson.

*Paris's Drawing of the Queen* is attracting very great applause. Queen Adelaide, among other distinguished members of the royal family, has expressed the utmost approbation of it.

*Queen Victoria's Pocket-Book*, for 1838 (W. Marshall), is quite the thing for the use of lady or housekeeper, with all the appurtenances of almanac, memoranda, &c. &c. and a number

\* Our dramatic notices of this busy week are unequal; but where there were so many claims upon our notice, we were obliged to serve with longest notices those pieces which we had an opportunity of seeing first. All the theatres have been fully attended.

of neat engravings. *The Pickwick Comic Almanac*, with twelve comic subjects, by R. Cruikshank, is not so well. Boz cannot be successfully imitated: in other respects, however, this annual is useful and amusing.

*New Principle of Heat*.—We have not had an opportunity of examining, but have heard an extraordinary account of a new principle of heat, which has been visible, at least its receptacle has, at the Jerusalem Coffee-house. This matter, in an iron vase or stove, radiates during twenty-four hours, and is applicable to the heating of apartments, the boiling of water, the raising of steam; and, in short, possesses every quality of fire, though confined within so small a compass. It is said to be the invention of a gardener, and the most unbounded effects are anticipated from its use. Washing, drying, and ironing, are completed within a few minutes by a small apparatus; but if the principle can, as supposed, be applied to locomotive engines and steam vessels, it is impossible to say what wonders it may be able to produce. Since writing the foregoing, we have, at the latest hour, gone to the city and inspected this invention. We have only to repeat, that we consider it a surprising and very important discovery. It may be safely taken in a carriage, warm halls, cathedrals—in short, answer a thousand useful and scientific purposes.

*Magnificent Pianoforte*.—We were yesterday much gratified by being permitted to see and hear a grand piano, built by Messrs. Zeitter and Co. for Mr. Goding. In music it is of a very high order of merit; but its unique attraction is in the instrument itself, with its embellishments of art. Mr. Goding, it seems, discovered this splendid curiosity in Paris, and, after some years of watchfulness, had the good luck to make himself its owner. It was a harpsichord, built for Louis XIV., and possessing all the gorgeous beauty which, of right, pertained to that sovereign, of the rich and superb in the fashion of furniture. The inside of the lid was decorated by the glowing pencil of Watteau, and every compartment of the frame was decorated in a style not unworthy of this interesting picture. Messrs. Zeitter have been engaged to convert it into a grand pianoforte; and, in our opinion, they have succeeded to admiration.

*Monument to Chatterton*.—An advertisement in this Number will explain the proposition for a monument to the memory of Chatterton at his native Bristol. We had intended to have enforced the recommendation, but this statement, and a review of Dix's Life of the poet, which we have in store, render it unnecessary to enter upon the subject now.

*National Dish*.—Prince P—E— was speaking of dishes peculiar to different countries, and, being told that roast beef was the national dish of Old England, he observed, "No, no; it is not. I have been three months in London, and never seen one bite of roast beef on any von table; but I have never but see the national dish, viz. cock and pig." [Chickens and ham!]

*Weather Wisdom*.—Lieut. Morrison having finished with 1837, we take up Mr. Murphy (Weather Almanac), for the present, without remark. After a sample or two of the prophetic, we will refer to his theory and observations. "Monday, Jan. 1, fair-frost. Tuesday, 2, and Wednesday, 3, the same. Thursday, Friday, and Saturday, changeable.

*Clever Thief*.—The newspapers contain an account of a pale-faced youth, who contrived, by delivering a fictitious message, to walk off with a new invisible green great-coat!

**Pompey's Pillar.**—The "Malta Gazette" states that a party of English seamen, belonging to the *Hermes* steamer, lately repeated the feat of ascending to the top of Pompey's Pillar, where ten of them hoisted the Union flag, and drank the Queen's health with thrice three cheers and a salute of musketry. It was very tempestuous at the time, and the pillar rocked so much as to spill the wine out of a wine-glass.

*On a Man who stole a Print.*

"What? Dick a patron of the Arts?" "Tis true,—And so, good sir, look not thus unbelieving; For Dick doth patronise, and practise too, That very ancient art—the art of thieving." H.

*On a dull Preacher.*

From what college, I pray, does you dull preacher come? From St-Bee's, to be sure, he's so very hum drum. H.

## LITERARY NOVELTIES.

*In the Press.*

Thoughts on Tactics and Military Organisation, with an Inquiry into the Offensive and Defensive Power of Russia, by Lieut.-Colonel Mitchell, h.p. Author of "Life of Wallenstein," &c. &c.—Rationalism and Revelation; or, the Testimony of Moral Philosophy, the System of Nature, and the Constitution of Man to the Truth of the Doctrines of Scripture; being the Hulsean Lectures for the year 1837, by the Rev. Richard Parkinson, B.D. Hulsean Lecturer.

## LIST OF NEW BOOKS.

Animals in Menageries, by W. Swainson, Esq. forming Vol. XCVIII. of Dr. Lardner's Cyclopaedia, with numerous Illustrations, fcap. 6s.—Middleton's Life of Cicero, new edition, 1 vol. 8vo. 14s.—Female Efforts Encouraged, fcap. 2s. 6d.—Rev. B. Powell's Connexion of Natural and Divine Truth, 8vo. 9s.—The Life and Times of Louis XIV., by G. P. R. James, Esq. 2 vols. 8vo. 17. 8s.—Love, by the Authoress of "Flirtation," &c. 3 vols. post 8vo. 17. 11s. 6d.—T. S. Cooper's Sketches of Nature, hf.-bd. morocco, 11. 11s. 6d.—Sir John Barrow's Life of Richard, Earl Howe, 8vo. 12s.—Dr. J. Abercrombie on the Intellectual Powers, 8th edition, post 8vo. 8s. 6d.—Anglo-India, Social, Moral, and Political, 3 vols. post 8vo. 17. 7s.—Illustrations of the History and Practice of the Thugs, 8vo. 15s.—A. J. Powell on Willis, 2d edition, 12mo. 4s.—Celestial Scenery, or the Wonders of the Planetary System, by T. Dick, 12mo. 10s. 6d.—The Life of Sir Walter Scott, Vol. VI. post 8vo. 10s. 6d.—Quarles's Divine Emblems, with Etchings, 12mo. 4s. 6d.—Marquess Wellesley's Despatches and Correspondence—Spain. Edited by Montgomerie Martin, 8vo. 8s. 6d.—Supplement to Every Almanac for 1838, 3s.—Bishop Reynolds's Meditations for every Day in the Year, fcap. 5s. 6d.—Diary Illustrative of the Times of George IV. 2 vols. 8vo. 17. 10s.—Buttman's Catalogue of Irregular Greek Verbs, by the Rev. J. R. Fahlke, 8vo. 7s. 6d.—The Eloquence, by the Author of "Robert D'Artois," 3 vols. post 8vo. 17. 11s. 6d.—The Queen's Visit to the City; a Panoramic Representation, The East long. 7s. 6d. coloured.—Freeling's Grand Junction Railway Companion, 18mo. 2s. 6d.—More Hints on Etiquette, 12mo. 2s. 6d.—Memoirs of Mr. J. E. Trevelyan, by R. Trevelyan, Jun. 18mo. 2s. 6d.—Inquiry into the Doctrine of the Eternal Sonship, by R. Trevelyan, Jun. 12mo. 7s.

## TO CORRESPONDENTS.

\* \* Our table is literally covered with new works, which reached us on Wednesday and Thursday, and which we can only mention as likely to furnish us with occupation and matter for a month to come. Wilkinson's "Ancient Egypt" is, we know, a performance of intrinsic value. Croker's "Biography of the Rebel Holt" appears to be full of interest. Not only have Lady C. Bury's "Proofs of Love" arrived, but the thing complete in three volumes. "History of Thugs and Thuggery;" and we know not how many others are in array before us, and shall be reviewed with all convenient speed.

A Friend at Lincoln might have been able to refute the foolish assertion relative to the *quantum* of information. The public is judicious enough to hold a widely opposite opinion.

## ADVERTISEMENTS, Connected with Literature and the Arts.

### MONUMENT to CHATTERTON.

A few gentlemen of Bristol, admirers of the genius of Chatterton, and desirous of enriching the city of his birth with a memorial of his literary genius, have formed themselves into a committee for the purpose of erecting a monument to his memory in the church of St. Mary Redcliffe, Bristol, or in some other appropriate situation.

There is no stone or tablet within the walls of Bristol to tell the stranger of one of her most highly gifted sons, or to recall the memory of his genius to the present generation. The local efforts now being made to supply this memorial, will, it is hoped, be successful; but as the fame of Chatterton is a national possession, contributions are invited from all who have sympathized with the fortunes and character of the youthful poet, and who can feel it a pleasure to join in paying a tribute of admiration and regret at the shrine of neglected genius.

Subscriptions will be received by John Dig. Jun., Esq., 2 Duncannon Place, Lullington; The Editor of the *Literary Gazette*, Wellington Street, Waterloo Bridge, Strand; The Editor of the *Athenaeum*, Wellington Street near Waterloo Bridge, Strand; Mr. Strong, Bookseller, Bristol and Exeter; and by Alexander George, Esq., Bristol, 21, Dec. 1837.

Subscriptions already received.

### NOW EXHIBITING,

In the Egyptian Hall, Piccadilly.

**THE CURIOUS COLLECTION** made by the Party recently sent into the Interior of South Africa, by the Cape of Good Hope Association for Exploring Central Africa. Amongst the very many interesting objects are some hundreds of Drawings, and a number of well-illustrated Figures of the different Natives, in their natural costume.

Admission, 1s.

The proceeds to be applied in the promotion of further discovery.

### HANWELL COLLEGIATE SCHOOL,

Middlesex.—Principal, the Rev. J. A. Emerson, M.A., Oxon, Curate of Hanwell.—Parents desirous of entering their Children after the Christmas Vacation, may obtain Prospectuses, and further Particulars, on application (by letter, post-paid) to the Rev. T. F. Walmley, D.D. Rector, Hanwell; J. D. Macbride, Esq. D.D., Principal of Magdalen Hall, Oxford; B. A. Kents Esq. M.C. 43 Harley Street, Cavendish Square; and of the Principal at the School.

### EDUCATION.—The attention of Parents

is desirous of affording to their Children an Education in accordance with the increased intelligence and wants of the age, is directed to an Establishment, conducted by a Gentleman, who is a member both of an English and German University, at the latter of which he resided several years, and, having travelled much, he is perfectly conversant with most of the European languages.

The Course of Education embraces the Greek and Latin Classics, Mathematics, Natural Philosophy, French, German, and Italian, taught by native Teachers residing in the house, History, Geography, &c.

The principal of this Establishment feels justified in holding out to Parents the certainty of Pupils, who possess average talents, receiving in his School a sound Classical and Mathematical Education, together with instruction in the principal Languages of Europe; so that, when they enter one of our Universities, or some profession, Civil, Military, or Naval, they may be competent to engage in more enlarged studies with unusual advantage. Young Gentlemen destined for Sandhurst and Addiscombe have been prepared at this Establishment with great success, and distinguished themselves in their attainments in Languages and Mathematics. The highest references can be given.

Cards of address and terms may be had by applying, if by letter, post-paid, to Mr. Raines, 57 Pall Mall, London.

Dedicated, by command, to H. R. H. the Duchess of Kent.

**THE FRENCH REVOLUTION.**  
By THOMAS CARLYLE.

"This is one of the few books of our time that are likely to live for some generations beyond it. Some years will pass before these volumes begin to be generally relished; but relished they will be, and that thoroughly, sooner or later."—*Examiner*.  
There is no account of the French Revolution that can be in the slightest degree compared with this for intensity of feeling and profundity of thought."—*Monthly Repository*.  
"After perusing the whole of this extraordinary work, we can allow, almost to their fullest extent, the high qualities with which Mr. Carlyle's idolaters endow him."—*Times*.  
"This is not so much a history as an epic poem; and notwithstanding, or even in consequence of this, the tract of histories. It is the history of the French Revolution, and the poetry of it, both in one; and on the whole, no work of greater genius, either historical or poetical, has been produced in this country for many years."—*Westminster Review*.  
James Fraser, 215 Regent Street, London.

**ENCYCLOPÆDIA BRITANNICA.**  
A Republication of this great National Work, in monthly half-volumes, price 18s. each, handsomely bound in cloth and lettered in gold, will be commenced on the 1st of January.

**PROOFS AND ILLUSTRATIONS of the ATTRIBUTES of GOD,** from the Facts and Laws of the Physical Universe, being the Foundation of Natural and Revealed Religion.  
By JOHN MACCULLOCH, M.D. F.R.S. F.L.S. F.G.S. &c.  
"The Church of England Quarterly" for October last, commences a long review and analysis of this work in the following terms:—"The talented writer of this inimitable work is no more; but stupendous is the monument which his genius has erected. Such an exuberance of ability few men have ever part of these elaborate volumes, that it is difficult to make a selection for the purposes of a review."  
"The gifted author's name and eminence have long been well known in connexion with natural science; but it now appears that all his devotion to that and other departments of human knowledge has been made subservient to this his last and ablest work, which, we confidently predict, will hand down his celebrity to the latest times."—*Monthly Review*.  
James Duncan, 27 Paternoster Row.

**NATURAL HISTORY OF CAGE-BIRDS;** their Management, Habits, Food, Diseases, Treatment, Breeding, and the Methods of Catching them.

By J. M. BECHSTEIN, M.D.

"A very delightful book of its kind. .... seems to us an indispensable book for the bird-fancier."—*Spectator*.

"It will be welcome to every gentleman's library or drawing-room table. It is superbly got up, with an immense number of vignettes; and, in fact, rivals the beauty of the *Annals*."—*Weekly Dispatch*.

London: Wm. S. Orr and Co.; and W. and R. Chambers, Edinburgh.

Price Five Shillings, cloth.

**THE CHURCH of ENGLAND MAGAZINE.** Vol. III., containing Contributions by the Bishops and Clergy of the Church. Part XX. for January, price 1s. 6d. commences a new Volume, and intending Subscribers are requested to forward their orders to their Booksellers as soon as possible. 3s. 6d. Vols. I. and II. may still be had, price Half-a-Guinea.

In 2 vols. crown 8vo. handsomely bound in cloth, price 14s.

**THE LOUNGER'S COMMONPLACE BOOK;** or, Miscellaneous Collections in History, Criticisms, Biography, Poetry and Romance. A new edition. London: Wm. S. Orr and Co.; and W. and R. Chambers, Edinburgh.

**PHILOSOPHICAL TRANSACTIONS.** In 4to. with Six Plates, price 22s.

**THE PHILOSOPHICAL TRANSACTIONS of the ROYAL SOCIETY for the Year 1827.** Part II., containing the following Papers:—1. First Memoirs on the Theory of Analytical Operations, by the Rev. Robert Murphy, M.A.—2. On the Adaptation of different modes of Illuminating Lighthouses, by William Henry Barlow, Esq.—3. Researches on the Tides: *8/64th* Series of the Progress of the Phenomena of the Absorption of Light, and the Colors of this Plates, by Sir David Brewster, K.H. 11. D. F.R.S.—4. On the Development and Extinction of regular double refracting Structures in the Crystalline Lenses of Animals after Death, by Sir David Brewster, K.H. 11. D. F.R.S.—5. On the Temperature of Insects, and its connection with the Functions of Respiration and Circulation in this Class of Invertebrate Animals, by George Newport, Esq.—6. On the first changes in the Organs of the Mam-mifers in conjunction, and on the Mode of Origin of the Carion, by Thomas Wharton Jones, Esq.—7. Sequel to an Essay on the Constitution of the Atmosphere, published in the Philosophical Transactions for 1826, with some Account of the Sulphures of Lime, by John Dalton, in the F.R.S.—8. On the Hereditary Instincts of the Precedence of Animals, by Thomas Andrew Knight, Esq. F.R.S.—9. On the Elementary Structure of the Muscular Fibre of Animal and Organic Life, by Frederic C. Key, Esq. F.R.S.—10. Observations on the Minute Structure of some of the higher forms of Polyp, by the Rev. Mr. B. 11. On the Life, or Union of Polyp, with the Jaccous and other Aboriginal Tribes of the Malay Peninsula, by Lieut. Newbold, A.D.C. to Brigadier-General Wilson, C.B.—12. Description of a New Barometer, recently tried up in the Apartments of the Royal Society, by Francis Baily, Esq. V.P. and Treasurer R.S.—13. Meteorological Journal, January to June 1827, by J. B. Baily, Esq. Published by the Royal Society; and sold by R. and J. E. Taylor, Red Lion Court, Fleet Street.

Where also may be had, **Abstracts of the Papers printed in the Philosophical Transactions, from 1800 to 1837.** 3 vols. 8vo. at 1l. 2s. 6d.

**THE GENTLEMAN'S MAGAZINE for January 1833,** is the first Number of a new Volume, and the Publisher takes the opportunity to state to the Public that the objects to which this Miscellany are more particularly directed, are the Classical and Standard Literature of England, its History and Antiquities. Its principal divisions are, Literary Criticism, Original Correspondence, Literary and Antiquarian Announcements, Retrospective Review, Notices of New Publications, Literary and Scientific Intelligence, Historical Chronicle, and a very copious Biographical Obituary.—The Number for January contains a striking article on the Present State of the Public Records; a Statistical Survey of the Universities of Europe; and Notices of the University of Cambridge, by Mr. G. C. Hamilton. It is embellished with a View of Old Richmond Palace; and contains Memoirs of the late Earl of Egremont, Cavan, and Clancarty, Sir H. Dryden, Mr. Hibbert, &c. &c. Price 2s. 6d.

Published by W. Pickering, Chancery Lane.

**SKETCHES in LONDON.** Now publishing in Monthly Numbers, price One Shilling each Number, illustrated by two humorous Etchings on Steel.

**SKETCHES in LONDON.** By the Author of "Random Recollections."

"The Great Metropolis," &c.

No. IV. will be devoted to the Interior of the Parliament, and will contain a humorous Engraving by Sir R. B. O'Connell taking the Oath, and "A Scene in the House of Commons." As an extra demand is anticipated for this Number, in consequence of the extraordinary matter it will contain respecting the new Parliament, earlier orders are, therefore, requested.

W. S. Orr and Co. Paternoster Row.

A new edition, in 2 vols. small 8vo. price 16s.

**PASSAGES from the DIARY of a late PHYSICIAN.**

By SAMUEL WARREN, F.R.S.

The Third Volume, price 6s. may be had separately, to complete the former editions.

"The first chapter of these Passages from the Diary of a late Physician" appeared in "Blackwood's Magazine" in August 1826, and the last in August 1827. The first separate publication of them, in two volumes, took place in 1822; between which period and the present, four very large impressions of them have been exhausted; and it is a great satisfaction to both the publisher and myself, to find that this has been effected without having in any way had recourse to the modern system of puffing, that insupportable source of the degradation of literature. A fifth edition, having been called for, is accompanied by the Third Volume, which contains the chapters that have since been given to the appearance in "Blackwood's Magazine."—*Author's Preface*. William Blackwood and Sons, Edinburgh; and Thomas Cadell, London.

COMPANION to ROBINSON CRUSOE.

Neatly printed in 1 vol. bound in cloth, price 3s. 6d.

**THE VOYAGES, DANGEROUS ADVENTURES, and IMMINENT ESCAPES of CAPTAIN RICHARD FALCONER.** Containing the Laws, Manners, and Customs of the Indians in America; his Shipwreck; his Marrying an Indian Wife; his narrow Escape from the Island of St. Domingo, &c. Intermixed with the Voyages and Adventures of Thomas Randall. Embellished with two Engravings by "Piss."

"This work I read in early youth. I am ignorant whether it is altogether fictitious and written on De Foë's plan, which it greatly resembles, or whether it is only an exaggerated account of the adventures of a real person. I have no means, for either, of looking for it ten years to no purpose, and at last owed it to the active kindness of Mr. Terry. Yet Richard Falconer's Adventures seem to have passed through several editions."—*Soddy's Life*, vol. iii. p. 213.

E. Chilton, 20 Holles Street.

## FAMILIES AND LITERARY CIRCLES

Desirous of perusing the New Publications, are informed that the Circulation of New Books for *Perusa*, on the Plan of the Prussian and German Book Companies, adopted at SAUNDERS AND OTLEY'S extensive Library, Conduit Street, Hanover Square, ensures a regular Supply in the most distant Provinces. Subscribers are assisted in the choice of Works by the publication of select Monthly Lists (English and Foreign). Book Societies, and Literary Institutions throughout Great Britain, are supplied on a similar plan, rendering the purchase of Books unnecessary.

Terms and Particulars, as a single letter, on application (post-paid) to Saunders and Otley, Publishers, Conduit Street, Hanover Square.

## POPULAR EDUCATION; or the NORMAL SCHOOL MANUAL.

By HENRY DUNN,

Secretary of the British and Foreign School Society.

## Contents.

1. Pleasantness of Teaching
2. Government of a School
3. The Monitorial System
4. The Art of Communicating
5. Rewards and Punishments
6. Moral and Religious Influence
7. Moral and Intellectual Habits of a Teacher
8. Duties of a School Committee.

"Mr. Dunn's Normal School Manual is an excellent and thoroughly practical work, which we should rejoice to see in the hands of all schoolmasters, though their grade should be higher than the class for which it is intended. It is the well-digested production of a man evidently devoted to his profession, and thoroughly acquainted with its best principles and practice."—*Tait's Edinburgh Magazine*.

"We consider it a sacred duty to draw attention to this admirable treatise."—*Liverpool Advertiser*.

London: Sunday School Union Depository, 60 Paternoster Row.

In 1 vol. 8vo.

## CONNECTED ESSAYS AND TRACTS:

being a series of inferences deduced chiefly from the principles of the most celebrated sceptics; containing—1st. Observations on the Foundations of Morals in Human Nature. 2d. A Digressive Essay upon some Metaphysical Paradoxes. 3d. A Treatise on the Evidences of Revelation in the Scheme of Nature. To which are added, Two Dissertations upon the Question of Materialism, and upon Hume's Theory of Religion, and various notes, &c.

By HENRY O'CONNOR, Esq., Barrister-at-Law.

"The same principles which at first seem to lead to scepticism, pursued to a certain point bring men back to common sense."—*Berkeley's Dialogues*.

Whittaker and Co. Ave Maria Lane.

In six handsome volumes 8vo., price 3s. 12s. Robinson's new edition of

## MATTHEW HENRY'S COMMENTARY ON THE HOLY SCRIPTURES.

This Work, being published in a bold and elegant type, is adapted for ordinary perusal; and having been carefully collated with two other editions, is free from the omission of whole paragraphs, as well as sentences, members of sentences, and many single words; consequently, the author, in another edition, is made either to contradict himself, or to say what is very absurd. It is allowed that this is the most popular edition yet offered to the public.

Matthew Henry's Commentary, for its orthodoxy, learning, and piety, has been strongly recommended by the Rev. W. Romaine, Rev. Dr. Doddridge, Rev. Dr. Adam Clarke, Rev. Robert Hall, and the Rev. Edward Bickersteth, the former of whom has said, "There is no Commentary on the Bible, either ancient or modern in all respects equal to Mr. Henry's."

London: J. O. Robinson, Jun., 12 Warwick Square.

DR. CHALMERS'S NEW WORK.

## LECTURES on the EPISTLE of PAUL the APOSTLE to the ROMANS. Vol. I. 8vo. 20s. 6d. cloth.

The publisher thinks it proper to state that these Lectures will appear subsequent to their publication in the present form, in the new and uniform edition of Dr. Chalmers's Works, at present in the course of publication.

Also, will be published on 1st January, 1833,

Volume IX. of the new and uniform Edition of Dr. Chalmers's Works, being "Congregational Sermons," Vol. II. 12mo. 6s. cloth.

About one-half of the eighteen Sermons in this volume were never before published.

William Collins, Glasgow; and Whittaker and Co. London.

2d edition, much improved.

## THE MECHANIC'S POCKET DICTIONARY, being a Note-Book of Technical Terms, Rules, and Tables, useful in the Mechanical Arts.

By WILLIAM GRIER, Civil Engineer.

Illustrated by Engravings of Machinery and nearly 200 Cuts and Diagrams on wood. Price 9s. cloth.

Also, by the same Author, 4th edition,

The Mechanic's Calculator; comprehending Principles, Rules, and Tables, in the various departments of Mathematics and Mechanics, useful to Students, Engineers, and Artisans in general. Illustrated by Engravings and numerous Diagrams. Price 5s. 6d. cloth.

"From the modest title-page few persons can learn the great value of the book; it is, in fact, a complete introduction to the mathematical and mechanical sciences, and one of the very best in the language."—*Athenaeum*.

Blackie and Son, Glasgow, Edinburgh, and 21 Warwick Square, London.

In 8vo. price 9s. bd., and in 12mo. 5s. 6d. bd.

## THE NEW WHOLE DUTY of MAN;

containing the Faith as well as Practice of a Christian, made easy for the Practice of the Present Age, as the Old Whole Duty of Man was designed for those unhappy times in which it was written; and supplying the Articles of Christian Faith which are wanting in that Book, though essentially necessary to salvation. Printed for Longman and Co.; J. Richardson; J. M. Richardson; Hatchard and Son; J. Booth; Baldwin and Co.; J. G., and F. Rivington; Hamilton and Co.; Whittaker and Co.; Simpkin and Co.; Smith, Elder, and Co.; S. Hodgson; and Houlston and Son.

The 3d edition of the Second Volume of

## ALISON'S HISTORY OF THE FRENCH REVOLUTION. THE SIXTH VOLUME OF

## History of Europe.

From the commencement of the French Revolution to the Restoration of the Bourbons.

By Archibald Alison, F.R.S.E.

"No work could have made such progress in national opinion without substantial qualities. Its vigour of research and its manliness of principle, its accurate knowledge and its animation of style, have been the grounds of its remarkable public favour, as they are the guarantees for its permanent popularity. The present volume, the sixth of the Series, advances in interest."—*Blackwood's Magazine*, No. 226.

Lately published,

## New Editions of the Five First Volumes.
